

ETHAN DUVALL | SOFTWARE ENGINEER

Portfolio | Github | (720) 238-3034 | eduvall9405@gmail.com | LinkedIn

SUMMARY

Software Engineer with production experience debugging, validating, and improving backend and frontend systems built with JavaScript, TypeScript, Python, and React. Strong focus on reliability, testing, documentation, and operational excellence. Experienced working with REST APIs, OAuth-based integrations, CI pipelines, and AWS-hosted services, with a collaborative, quality-first engineering mindset.

SKILLS

Languages & Frameworks: JavaScript, TypeScript, React, Python
Testing & QA: Cypress, Mocha, Chai, test case design, bug reproduction
Systems: Windows OS (installation, configuration, troubleshooting), Linux (basic CLI, logs)
Tools & Platforms: AWS (IAM, DynamoDB, API Gateway, Elastic Beanstalk), REST APIs, WebSockets, Git/GitHub, CI/CD (GitHub Actions, CircleCI), JSON
Databases: SQL (basic querying), relational data concepts

PROFESSIONAL EXPERIENCE

Outlier AI

Software Developer

- Reviewed, validated, and improved production JavaScript, TypeScript, Python, and React codebases with a focus on correctness, security, and maintainability
- Diagnosed defects using logs, error traces, and test failures, preventing faulty code from reaching production systems
- Improved test coverage and reduced flaky validation paths, decreasing review cycle time by ~25%
- Authored and maintained clear technical documentation defining review standards, edge cases, and expected system behavior
- Collaborated asynchronously through pull request reviews, providing actionable feedback and incorporating peer input

Denver, CO
October 2024-Present

PROJECTS

Playlist Creator - Solo Project

Full-stack Application | React, TypeScript, Spotify Web API, Cypress | Repo Link | Live

- Built a web application integrating OAuth-based authentication and third-party APIs, handling token management, permissions, and secure API access
- Implemented and debugged REST API consumption from the UI, addressing rate limits, data consistency issues, and error handling

Genshin Impact Team Builder - Solo Project

Full-stack Application | React, Spring Boot, REST APIs, Cypress | Repo Links - Front - Back | Live

- Designed and consumed backend REST APIs supporting complex data-driven workflows and business rules
- Debugged API responses, backend logic, and frontend state while validating behavior with automated tests

Brain Defrost - Group Project

Real-time Multiplayer Application | React, TypeScript, WebSockets Repo Link | Live

- Built and stabilized real-time client-server interactions, debugging synchronization and state consistency issues
- Collaborated on UI workflows and edge cases, ensuring reliable user experiences under concurrent usage

EDUCATION

Turing School of Software & Design

Frontend Software Engineering Certificate

- 1,000+ hours of hands-on programming in React, testing, and full-stack development
- Leadership: Organized Professional development workshops, boosting peer engagement by more than 30%
- Relevant coursework: Programming in Js and C# | Front-end foundation | Object Oriented programming | Test Driven Development | React Fundamentals | Creating full tests applications using Apis | Full Stack Development | Working with a team to create a full stack application |

Denver, CO
November 2023-July 2024

DEBUGGING & SUPPORT EXPERIENCE

- Reproduced and triaged bugs across JavaScript, Python, and React codebases using logs, error traces, and controlled test cases
- Isolated root causes by narrowing scope across frontend, API, and data layers
- Wrote internal-style documentation outlining repeatable troubleshooting and validation workflows
- Validated fixes through regression testing to ensure issues did not reoccur
- Communicated technical findings clearly in written feedback for asynchronous teams
