## EDUCATION

### Indiana University Bloomington

Master of Science in Computer Science

Bloomington, IN

Aug 2024 – May 2026

### Poojya Doddappa Appa College of Engineering

Bachelor of Engineering in Computer Science and Engineering

Kalaburagi, India

Aug 2019 – Jun 2023

## TECHNICAL SKILLS

**Languages:** Python, Java, JavaScript, R, C++, C, HTML, CSS

**Frameworks:** Spring Boot, Angular, FastAPI

**Libraries:** TensorFlow, PyTorch, scikit-learn, OpenCV, SimpleITK, elastix, Pandas, NumPy, Matplotlib

**Machine Learning & AI:** Transformers, XGBoost, GANs

**Cloud & DevOps:** AWS (Lambda, S3, EC2), Docker, Kubernetes, microservices architecture, RabbitMQ

**Databases & Tools:** PostgreSQL, MySQL, Git, Gradle, VSCode, Jupyter Notebooks

## EXPERIENCE

### Indiana University Indianapolis

Machine Learning Research Intern

Indianapolis, IN

May 2025 – Aug 2025

- Accelerated dataset processing by 99.8% (8+ hours → 57.8 seconds) using Python multiprocessing with 6 concurrent workers across 95-patient prostate MRI dataset
- Built multimodal preprocessing pipeline for T2W/ADC/HBV images using elastix co-registration and Nyul normalization, reducing T2W intensity variation by 52.4% with QA framework achieving 100% spatial registration accuracy using SimpleITK validation

### SandLogic Technologies

Deep Learning Intern

Bangalore, India

Jan 2024 – Aug 2024

- Architected LINGOFORGE NLP product using BPE/WordPiece tokenization and TensorFlow/PyTorch, reducing model size by 60% while maintaining 95%+ accuracy through knowledge distillation
- Deployed multi-domain AI solutions across 8+ projects: YOLOv8 pipe detection (92%+ mAP) using Ultralytics/OpenCV and CNN image classification (94%+ accuracy) with data augmentation
- Built hotel price forecasting system using XGBoost with engineered features from 15+ scraped sources, achieving 87%+ accuracy and generating 10,000+ synthetic samples via GANs

### S.V.G Enterprises

Software Engineer

Kalaburagi, India

Jun 2023 – Dec 2023

- Engineered proprietary inventory management system digitizing 2000+ daily transactions across procurement, storage, and distribution using Python and MySQL database architecture
- Developed automated billing module with real-time analytics dashboard, reducing processing time by 85% and eliminating 95%+ manual errors while tracking 50+ product SKUs using JavaScript and Chart.js

## SELECTED PROJECTS

### Room Reservation | Angular, Spring Boot, PostgreSQL, Kubernetes, RabbitMQ, Docker

Aug 2025 – Dec 2025

- Developed scalable microservices-based room booking system with Angular frontend and Spring Boot backend, featuring interactive building maps, role-based access control for 4 user types, and automated email notifications via RabbitMQ event-driven architecture
- Architected cloud-native deployment on Kubernetes with Edge/Config services and 3+ business microservices (User, Room, Reservation), achieving sub-second transaction times and supporting auto-scaling from 1M to 5M concurrent users

### No-Detours | Python, FastAPI, JavaScript, HTML/CSS, OpenAI/Anthropic APIs

Apr 2025 – May 2025

- AI-powered travel planning assistant that generates personalized itineraries, packing lists, and budget estimates from natural language queries using FastAPI backend and vanilla JavaScript frontend
- Integrated real-time data from weather APIs (OpenWeatherMap), geolocation services (Google Maps), and web scraping (Firecrawl) to provide contextual travel recommendations with automatic calendar export functionality
