

Sushma Kunjangada Arun

Boston, MA | skunjangadaarun@gmail.com | 6176026189 | Portfolio | LinkedIn | Github

Summary

Software Developer experienced in backend and full-stack development using Python, Java, SQL, React, AWS, and Swift. Strong focus on API design, system performance, and user-focused functionality across web, mobile, and cloud platforms.

Education

Northeastern University	Jan 2024 - Dec 2025
Master of Science in Information Systems	GPA: 3.7
Coursework: Program Structures & Algorithms, Network Structure & Cloud Computing, Smartphone Based Web Development	
Coorg Institute of Technology	Aug 2016 - Oct 2020
Bachelor of Engineering in Computer Science	GPA: 8

Skills

Languages:	Python, Java, JavaScript, TypeScript, SQL(MS SQL, MySQL), Swift, HTML, CSS, NoSQL,C
Frameworks & Libraries:	React, Node.js, Express.js, Redux, Angular, Next.js, REST APIs, MongoDB
Cloud & DevOps:	AWS (EC2, S3, RDS, IAM), Docker, GitHub Actions, CI/CD Pipelines
Tools & Platforms:	Git, GitHub, Postman, Visual Studio, Eclipse, Figma, Power BI, Tableau, Unix/Linux
Concepts:	Data Structures & Algorithms, Object-Oriented Design, Database Architecture, Agile/Scrum, SDLC, Machine Learning

Work Experience

Integration Developer , Happiest Minds Technologies – Bangalore, India	Jun 2021 - Nov 2023
- Migrated 15+ SOAP/REST web services from Tibco to Boomi, reducing system overhead by 30% and improving API response times by 25%, while troubleshooting integration issues to ensure reliability - Collaborated closely with QA and developers, showing strong interpersonal skills, and resolving 10+ production issues monthly, contributing to high system uptime - Optimized complex T-SQL database queries, improving backend performance and reducing processing time by 5 minutes - Improved system reliability by 45% through scalable integration solutions, ensuring compliance with enterprise standards and streamlining backend workflows	

Academic Projects

Cloud-Native Web Application on AWS	Sept 2025 – Dec 2025
- Architected and built a production-grade cloud-native application using Python (FastAPI/Flask) and Amazon RDS (MySQL), delivering secure and scalable REST APIs - Automated end-to-end AWS infrastructure using Terraform (IaC), deploying VPC, EC2, ALB, Auto Scaling, S3, RDS, and Route 53 for high availability as part of a cloud-native automation solution - Implemented CI/CD pipelines and serverless workflows (GitHub Actions, Packer, AWS Lambda, SNS, Mailgun), enabling seamless deployments and reliable user verification	
HopSaver - iOS Personal Finance Tracker	Jan 2025 – Apr 2025
- Built a Swift-based personal finance iOS app with speech-to-text input using Apple's Speech Framework, reducing manual entry effort - Designed a user interface with SwiftUI dashboards showing visual expense trends and budget alerts, ensuring consistent UX across iPhone screen sizes - Integrated Core ML for monthly expense prediction of 85%+ test accuracy and Core Data for offline access and data persistence	
Safe Harbour Youth - Full-Stack Web Platform	Jan 2024 – Apr 2024
- Built a secure progressive web application with a React.js and Redux front-end, and a Node.js with MongoDB backend, enabling youth to anonymously report abuse and monitor case status - Developed REST APIs with role-based access controls, improving case response workflows by 35%, and ensuring UI consistency with attention to detail - Integrated Stripe donations, multilingual support 3 languages, and responsive design principles to enhance usability and accessibility
