

Akash Raj Porika

SOFTWARE DEVELOPMENT ENGINEER

Missouri, USA || akashrajputporika@gmail.com || Ph. No.: +13146263490 || [LinkedIn](#)

Professional Summary:

Software Developer with 3+ years of experience in crafting robust and scalable web applications with extensive experience in implementing microservices architecture, CI/CD pipelines & cloud platforms (AWS) to optimize development and deployment processes. Proficient in both frontend and backend development, adept at leveraging React, Angular, Spring Boot and Node.js to build dynamic solutions. Experienced in developing secure, scalable, and RESTful web applications using Java frameworks, enabling rapid prototyping and efficient development.

Technical Skills:

Frontend Technologies:	React (Hooks, Redux), HTML, CSS, JavaScript, TypeScript, Bootstrap, UI Material, jQuery
Languages & Tools:	Java, C++, SQL, Node.js, Git, Bitbucket
Backend & Frameworks:	Spring Boot, Spring Batch, Spring Security, Spring Core
J2EE Technologies:	Servlets, JSP, EJB, JPA, JDBC, Hibernate
IDEs:	NetBeans, IntelliJ IDEA, Eclipse
API & Integration:	RESTful APIs, GraphQL, Swagger, Postman
Databases:	MySQL, PostgreSQL, SQLite, MongoDB (NoSQL)
CI/CD & Tools:	Jenkins, Code Ship, GitHub Actions
Testing tools:	JUnit, Mockito, Selenium, Jest, React Testing Library
Cloud, DevOps:	AWS (EC2, S3, Lambda, Redshift), Docker, Kubernetes, Jenkins, GitHub Actions, Code Ship, Apache Kafka
Web Server:	Apache Tomcat
Computer Fundamentals:	Data Structures, Algorithms, Object-Oriented Design
Architecture & Concepts:	Microservices, System Design, Distributed Systems, Concurrency, Multithreading, Memory Management
Methodologies:	Agile, Scrum, Jira, SDLC
Operating Systems:	Windows, UNIX, LINUX, Mac OS

Education:

Master of Science in Information Technology Management– Webster University, St. Louis, MO, USA

Bachelor of Technology in Computer Science Engineering - Guru Nanak Institute of Technology, Hyderabad, India

Professional Experience:

UMB Financial Corporation – MO | Software Developer

Jun 2024 - Current

- Developed a **cloud-based financial software solution for small business accounting and personal budgeting tools using Java EE**, ensuring system robustness, scalability, and high availability to manage high volumes of real-time financial records and user interactions.
- Implemented **MongoDB** for storing unstructured and semi-structured financial data such as receipts, invoice metadata, and transaction logs across different products like **QuickBooks and Mint**, enabling flexible data modeling and horizontal scalability.
- Implemented reusable **React components** (tables, modals, charts) for consistent UI across budgeting analytics, tax summaries, and account management, **improving frontend maintainability by 40%** and reducing code duplication across modules.
- Architected the **system using a microservices model**, breaking down features like user profile management, budgeting analytics, and tax documentation into loosely coupled services to improve deployment efficiency and maintainability across teams.
- Built **RESTful APIs with Spring Boot** for core financial functionalities including **user authentication, payment history retrieval, automated calculations, and invoicing workflows**, improving latency and enabling real-time data updates across microservices.
- Deployed the application on **AWS using EC2 for compute and S3** for secure financial data storage, ensuring global availability, and elastic scalability resulting in **10% improvement in deployment efficiency and 99.9% application uptime** to support Intuit's growing user base.
- Used **Apache Kafka** as a central messaging backbone to enable real-time event streaming between microservices such as transfer processing and account balance updates, **reducing system coupling by 25%** and significantly improving scalability.
- Created reusable **GitHub Actions** for commonly used tasks like **Docker** cleanup, test coverage reporting, and Maven builds, improving consistency and maintainability across multiple services.

Cognizant – India | Software Developer

Jun 2021 – Aug 2023

- Designed and developed **microservices** using **Spring Boot** and **Spring Cloud** for building highly scalable, maintainable backend systems.
- Built responsive and mobile-friendly web applications using **HTML5, CSS3, and JavaScript**, ensuring cross-browser and device compatibility—resulting in a **5% improvement in mobile user engagement** and a **20% reduction in bounce rate** across key financial product pages.
- Optimized database performance through query tuning, indexing strategies, and horizontal sharding in **MySQL**, resulting in a **3% reduction in average query execution time** and **12% increase in throughput** under peak load, ensuring reliable performance for large-scale operations.
- Created **multithreaded processing** for high-volume transactions, improving system throughput and reducing processing time under peak user load.
- Developed robust backend services using **Java 8**, leveraging features such as **Lambda Expressions, Streams API, and Optional** to write clean, maintainable, and efficient code.
- Implemented **Redux** for centralized state management across modules such as user authentication, contract processing, and invoice generation, reducing prop-drilling and improving component reusability. Executed dynamic, user-friendly interfaces using **React** with **CSS3**.
- Utilized **Java Collections Framework efficiently** (HashMap, ConcurrentHashMap, ArrayList, LinkedHashMap) to handle large-scale financial data structures with optimized read/write performance.
- Optimized **API performance** by implementing request caching, pagination, and response compression, reducing payload sizes and improving API response time by up to **15–20%**.
- Refactored **Struts** Action classes, Form Beans, and JSP pages to streamline request handling and reduce redundant business logic in legacy monolithic system.
- Integrated **Postman with automated API test suites in CI pipeline**, improving defect detection and reducing testing time.
