Skills Summary

Designing and implementing scalable microservices using .NET (C#) and event-driven architectures. Experience with messaging systems (Kafka, RabbitMQ) and distributed caching (Redis). Full-stack development with Angular and React, building responsive user interfaces integrated with RESTful APIs. Cloud-native development on AWS (ECS, EKS, Lambda, EC2, S3, RDS, DynamoDB). Observability and quality tooling including Datadog, Grafana, Kibana, Sentry, and SonarCloud. Automated testing with unit and integration tests.

Experience

Full Stack Developer

Mar 2025 - Present

Ebix Latin America — Full-time

Remote — São Paulo, Brazil

Client: BTG Pactual | Project: SDI – Wire Transfer International (Open Finance)

Contributing to the SDI (International Wire Transfer) platform within the Open Finance domain, a mission-critical internal banking system responsible for managing and processing domestic and international transfer instructions. Designing and implementing integrations with FTS to support onboarding, validation, and processing of international wire transfers, ensuring compliance, reliability, and data integrity. Developing RESTful APIs using .NET 8, [React.js](https://react.dev/), applying Clean Architecture and Mediator pattern, with strong focus on scalability and maintainability. Leveraging Artificial Intelligence for automated file parsing and data extraction, significantly reducing onboarding time and improving data accuracy. Building and maintaining microservices-based solutions, including AWS Lambda integrations. Implementing unit and integration tests using xUnit and Moq, improving system reliability and regression safety. Working with PostgreSQL (AWS RDS) as the primary relational database. Utilizing AWS services for cloud infrastructure and application deployment. Monitoring and observability using Datadog, supporting proactive issue detection and system stability. Actively participating in code reviews and pair programming, mentoring junior developers and promoting best practices. Managing deployments via Azure DevOps CI/CD pipelines, with version control using Git. Participating in Sprint planning, estimations, and business review presentations, following Scrum/Agile methodologies. Developing and maintaining React.js front-end components integrated with ASP.NET Web APIs for internal banking applications.

Technologies:

.NET 8, C#, React.js, JavaScript, PostgreSQL, AWS (Lambda, RDS), Datadog, Azure DevOps, Git, xUnit, Moq, Microservices, REST APIs, Scrum

Mid Software Engineer

June 2022 – Feb 2025

Wex Inc Brazil

Remote

Working on migration of WEX's global funding manager, integrating key financial systems like Expedia and Booking.com using .NET Core 8 and AWS (Lambda, DynamoDB, ECS). Handled over 20 k requests p/day, by developing new scalable-resilient .NET API on AWS ECS and Lambda responsible for credit sync and credit widget reservations and quotes. Increased Contracts Integration resilience: migrating monolith to microservices and Integration to Event-driven communication with Kafka.

Activities Development of .Net 8 REST APIs using XUnit, Moq, integration test, Entity Framework and PostgreSQL RDS and Integrating with the front end using Angular 8+ and Blazor. Microservices integration using Kafka for Event-driven communication.

Used monitoring tools like Datadog, Sentry and Splunk, and DeepSource and WhiteSource for ensuring code quality. Conducting Code reviews and Pair Programming with Junior team members. Deploying on-premise via Azure CI/CD Pipelines and Git. Sprint estimations and Business review presentations following Scrum practices.

Junior Software Engineer
Framework Digital

April 2021 – June 2022
Belo Horizonte – MG - Remote

At Localiza&Co, a leading company in the mobility sector known for its excellence and innovation, I contributed significantly to a market-leading product with a fleet of over 500,000 vehicles. I worked on the Telemetry and Fleet Security product, where I had the opportunity to lead and contribute to the development of innovative solutions in the mobility field. I was involved in microservices applications to detect fraud, theft, and asset recovery.

Increased vehicle recovery rates by up to 20%: Telemetry allowed for a drastic reduction in the time to locate and recover vehicles. Real-time tracking enabled quicker and more effective actions by authorities, leading to more targeted responses.

Increased productivity in unit test development by 5.5X: Achieved this by refactoring Dependency Injection in test classes using OOP principles and design patterns.

Reduced vehicle fraud by over 15% using digital odometer monitoring: This was accomplished via event-driven monitoring, which significantly reduced vehicle fraud.

Activities

Developed .NET 5/6 REST APIs using XUnit, Moq, integration tests, Dapper, SQL Server, and MongoDB
Integrating with the front end using Angular 8+.

Integrated microservices using Kafka for event-driven communication.

Utilized monitoring tools such as Datadog, AppDynamics, and Sensedia API Gateway.

Deployed on-premises via Azure CI/CD Pipelines and Git.

Conducted sprint estimations and business review presentations following Scrum practices.

Internship Software Developer
FreeLaw – Connecting Lawyer to Lawyer

October 2020 – March 2021
Belo Horizonte – MG

A pioneering solution for law firms, connecting you to over 10,000 specialist lawyers. We automated administrative tasks, optimized processes, and elevated the quality of legal services. I had the opportunity to assist in the implementation of a front-end application using Angular 8+ for lawyers to request services.

Delivered the company website to attract new business partners: By developing the UI created by the Design team, and doing e-mail contact functionalities with Angular and .NET.

.Net 3.1 APIs development with Sql Server on Azure Devops, following scrum framework practices.

Developing Angular 8+ application following Figma Ui. Consuming .Net APIs. Conducted sprint estimations and business review presentations following Scrum practices.

Internship Software Developer
MaximoCon - IT Services

September 2020 – March 2021
Belo Horizonte – MG

Collaborated with different clients using IBM Maximo, handling implementation, upgrades, installation, and support. Worked on reports (BIRT, KPIs), scripts with JavaScript and Python, front-end tools, and integrations.

Technical Recruiter
Grupo Nonna

June 2020 - September 2020
Belo Horizonte - MG

Collaborated in managing, preparing, and storing clients' CVs and personal information in Grupo Nonna's database. Assisted in software implementation, database update, candidate capture, and reporting.

Technical Recruiter

January 2019 – December 2019

Keltia Ireland

Cork – Ireland

Collaborated in managing, preparing, and storing clients' CVs and personal information in Keltia's database (PCR). Used MS Office to edit and format CVs to clients' satisfaction, and MS Excel to report, analyze, and coordinate client and candidate information.

Education

- Postgraduate in Software Engineering with IA - Full Cycle Academy - 2026
- Systems Analysis and Development Faculdade Pitágoras – January 2020 – August 2022
- General English – B2 Certificate Direct English (Ireland) – February 2018 – January 2020 (exchange)
- .Net Direct to the Point Method with Microservice Architecture - Next Wave Education – Nov 2022
- Complete Modern Web Course with JavaScript – Udemy - Jun 2021
