

Professional Summary

Java Developer with 5+ years of experience building high-performance, cloud-ready microservices using Java 11–25, Spring Boot, and Quarkus. Strong background in REST API design, distributed messaging (Kafka), and database integration across Oracle, MongoDB, and PostgreSQL. Experienced in Agile delivery and technical leadership for Fortune 500 clients.

Skills

- **Programming Languages:** Java (versions 8-25), Python, Kotlin, JavaScript, TypeScript
 - **Frameworks & Libraries:** J2EE, Spring Boot, JPA, Quarkus, Angular, React, .net
 - **Build Tools:** Maven, Gradle
 - **Databases:** Oracle, MongoDB, PostgreSQL, Snowflake
 - **Messaging:** Apache Kafka, Redis
 - **Testing Frameworks:** JUnit, Mockito, Gherkin, Cucumber
 - **Containers & Virtualization:** Docker, Kubernetes, OpenShift
 - **API Specification:** OpenAPI
 - **Project Management Tools:** JIRA, Confluence
 - **Other:** Git, Jenkins, Bamboo
-

Eliassen Group (EG) [formerly Lightwell Inc.], Remote: February 2021 — Present

General Responsibilities:

- Conducted technical assessments for clients across different proficiency levels in Java and JVM-compatible technologies
- Engaged in mentorship to support professional and technical development of individuals

Project Experience

Java Developer – Fidelity Investments, Remote: April 2025 — December 2025

- Worked with existing Fidelity development teams to build a modernized version of a legacy application using Java 17/Spring boot 3.x.x, delivering the transition several months ahead of schedule
- Designed and implemented REST endpoints using Java 21 and Spring Boot following OpenAPI specifications, ensuring proper HTTP status codes, comprehensive error handling, and standardized response formatting
- Collaborated with the database team to design stored procedure interfaces and define data contracts, optimizing API performance and data retrieval efficiency
- Developed a security-focused input sanitization solution integrated with external validation frameworks to prevent SQL injection and other vulnerabilities

Java Developer - McLane Company, Remote: February 2024 — April 2025

- Developed, maintained, and integrated microservice-based Java applications using Java versions 11 through 21 leveraging the Quarkus framework
- Implemented Apache Camel and Apache Kafka in Quarkus-based microservices to create high-throughput, event-driven applications for managing frequently updated datasets
- Designed, implemented, and maintained a Java 21-based application using Quarkus, MongoDB, and Panache for handling dynamic document-based datasets
- Collaborated with cross-functional teams, including product owners and data engineers, to deliver high-quality, client-specific solutions aligned with business requirements effectively

Java Developer – Fidelity Investments, Remote: July 2022 — October 2023

- Led a team of 6+ Java engineers, mentoring on best practices for Java development and SQL standards while establishing coding standards and conducting code reviews
- Contributed to the development and design of an internal application for tracking team cost and impact using Java 11, Spring Boot, and Redis in an Agile environment
- Collaborated with product owners and data engineers to translate business requirements into technical solutions

Java Developer - McLane Company, Remote: February 2021 — July 2022

- Led Java development teams, establishing coding standards, conducting code reviews, and mentoring engineers on Java and SQL best practices
- Led development of RESTful web services using Java 8-17 with Spring Boot, Quarkus, and Open Liberty across multiple client projects
- Integrated Oracle databases with Java applications using Hibernate ORM, optimizing object-relational mapping and code maintainability
- Developed and maintained PL/SQL scripts for database operations
- Integrated MongoDB into high-throughput Java applications, utilizing MongoDB Aggregation pipelines for efficient data processing
- Implemented Redis Cache into high-throughput Java applications, leveraging the Quarkus framework to cache frequently accessed static data and enhance performance

IT Work-Study/Associate Maysville Community & Technical College, Morehead, KY: May 2019 — February 2021

- Provided comprehensive on-site maintenance, troubleshooting, and set-up for user workstations
- Delivered exceptional remote service and technical maintenance across multiple campus locations
- Offered consistent technical support to on-site personnel
- Rendered essential technical support to fully remote campus personnel throughout the COVID-19 pandemic

Education**Maysville Community & Technical College | AAS in Information Technology****2020****GPA: 3.95 / 4.0**
