Summary

Software Engineer with mid-level experience designing and maintaining cloud-native web applications. Delivered a 40% reduction in data latency for real-time streaming at Netflix and cut API response times by 50% for enterprise dashboards at HCL. Skilled in backend development with Node.js, Python, RESTful APIs, and AWS/GCP, with a collaborative approach to cross-functional teamwork.

Technical Skills

- **Programming Languages & Frameworks:** JavaScript, TypeScript, Python, Flask, Django, Node.js, Express.js, HTML5, CSS3, Bash, SQL, T-SQL, PL/pgSQL
- **Frontend Development:** React.js, Redux, React Router, Next.js, Bootstrap, Tailwind CSS, Material UI
- **Backend Development & API:** Node.js, Express.js, Python, Flask, FastAPI, REST APIs, GraphQL, JWT Auth, WebSockets
- **Databases:** PostgreSQL, MySQL, MongoDB, NoSQL, Firebase, MS SQL Server, Cassandra
- **Cloud & DevOps:** AWS, EC2, S3, Lambda, Google Cloud, GCS, Firebase Hosting, Azure, Docker, Kubernetes, Terraform, GitHub Actions, Jenkins
- **Version Control & CI/CD:** Git, GitHub, Bitbucket, GitLab CI/CD, Docker Compose, Jenkins Pipelines
- **Testing & Monitoring:** Jest, Mocha, Cypress, Postman, Swagger, Prometheus, Grafana
- **Data Tools & Analytics:** Apache Spark, Airflow, Databricks, Delta Lake, Snowflake, BigQuery, Power BI, Tableau
- **Project & Workflow Tools:** JIRA, Confluence, Agile/Scrum, Visual Studio Code, Jupyter Notebooks, Notion
- **Security & Standards:** RBAC, OAuth2, GDPR, SOC2, SSL/TLS, CORS, API Rate Limiting
- **Software Development Concepts:** Object-Oriented Programming, Software Development Lifecycle

Professional Experience

Netflix

Mar 2025 - Present

Full Stack Developer

Remote, USA

- Architected and developed full-stack web applications using object-oriented programming principles in React.js for frontend and Node.js/Express for backend, enabling efficient visualization and management of Netflix data while improving system scalability and maintainability.
- Implemented cloud-native data platforms on AWS (EC2, Lambda, S3) and GCP (BigQuery, Dataflow) following software development lifecycle best practices, streamlining real-time data flow between front-end and back-end, reducing data latency by 40%, and enhancing overall platform performance.
- Built and optimized real-time streaming solutions using Kafka Streams and Flink, enabling sub-second processing and insights into user engagement, supporting personalized recommendations, and improving the responsiveness of Netflix's data-driven features.
- Developed real-time data dashboards with React integrated with Kafka Streams, delivering sub-second insights for user behavior and engagement analytics, facilitating data-driven decision-making, and supporting machine learning-based recommendation algorithms.
- Integrated machine learning models into web applications to provide personalized user experiences, such as Continue Watching and auto-preview features, achieving 99.9% data accuracy and automating validation using tools like Great Expectations.
- Designed and optimized clean and efficient RESTful APIs with Node.js for seamless front-end and backend communication, while automating CI/CD pipelines with Jenkins, GitHub Actions, and Docker, ensuring high availability, scalability, and faster deployment cycles.

HCL Technologies

Aug 2021 - Nov 2023

Full Stack Developer

Hyderabad, India

- Collaborated with cross-functional teams throughout the software development lifecycle to develop full stack enterprise web applications using React.js frontend and Python (Flask) backend, streamlining data workflows, improving maintainability, and enabling scalable solutions for clients while adhering to internal and regulatory compliance requirements.
- Designed and implemented RESTful APIs with Flask and AWS S3, optimizing data access layers, reducing API response times by 50%, and enhancing overall application performance for high-demand enterprise environments and reporting dashboards.
- Optimized database management performance across PostgreSQL, MongoDB, and Cassandra, improving query efficiency by 60%, enabling faster data retrieval, and supporting real-time reporting, analytics dashboards, and internal tools for enterprise-level client applications.
- Implemented automated backend validations using server-side scripting in Python (Pandas) and custom middleware, ensuring 99.9% accuracy across user-facing features, dashboards, and internal reporting systems, while reducing manual data verification effort and enhancing application reliability.
- Integrated RBAC-based access control, encryption, and compliance checks into applications, ensuring adherence to GDPR, CCPA, and SOC 2 standards, protecting sensitive enterprise data, and maintaining client trust across multiple projects and domains.
- Enabled real-time UI updates and event-driven workflows by integrating Kafka and Kinesis with frontend state management, achieving sub-second data propagation, 99.9% uptime, and seamless user experiences for mission-critical enterprise applications.
- Improved analytics and reporting dashboard performance by optimizing data layers, using materialized views, query caching, Snowflake, and Redshift, enabling faster insights, better decision-making, and efficient handling of large-scale enterprise datasets.

Education

University of Dayton, Dayton, OH, USA

Jan 2024 - Dec 2025

Master of Science, Computer Science

Avanthi Institute of Technology, Visakhapatnam, India

Jun 2018 - Jun 2022

Bachelor of Technology, Computer Science

Projects

Intelligent Task Manager

- Developed a full-stack task management system using React, Node.js, and MongoDB for real-time collaboration. Implemented JWT authentication, notifications via WebSockets, and AI-powered task suggestions using Python and NLP, improving task organization and user productivity.

AI Chatbot Assistant

- Designed an AI-powered chatbot using FastAPI, Python, and Hugging Face Transformers (BERT). Integrated with a web interface for customer queries and task automation, demonstrating natural language understanding and response generation.
