Full-stack software engineer with 10+ years building scalable, data-driven systems and 3+ years in technical leadership. Strong experience across Python, PHP, React, distributed systems, cloud infrastructure, and microservices.

EXPERIENCE

Lead Engineer, Times Internet (CouponDunia) Apr 2021 - Jul 2024

- Led development of 100+ features and services with a limited team capacity, delivering high throughput from the team.
- Designed event-driven notification systems using Kafka and Redis, scaling the system from 100k to millions of users.
- Owned cross-team delivery as technical POC, translating ambiguous requirements into shipped features.
- Optimized end-to-end system, including AWS, database, caches, frontend, and backend, increasing the overall performance by 40%.
- Led 20+ Agile sprints across 12 microservices, improving reliability and delivery velocity by 20%.
- Leveraged AI developer tools (Copilot) to accelerate refactoring, testing, and system comprehension, increasing efficiency by 25%.
- Built the tech team from scratch, employing and training highly efficient developers.

Senior Software Engineer, Times Internet (CouponDunia) May 2019 - Apr 2021

- Built 50+ high-impact user features and services using Node.js, Laravel, Yii2, and MySQL at production scale.
- Optimized Elasticsearch-backed APIs and SQL queries, improving performance and speed by 30%.
- Implemented payment integrations with improved security, reducing customer complaints by 80%.
- Automated CI/CD pipelines using Jenkins, enhancing team performance by 25%.

Senior Software Engineer, Good Glamm Group (BabyChakra) Feb 2017 - May 2019

- Developed and maintained 100+ REST APIs supporting data ingestion and mobile/web experiences.
- Migrated chat to Firebase Firestore, improving real-time scaling for group and individual chats from 1000 users to 100k users.

Software Engineer, Directi Jul 2014 - Feb 2017

- Built 50+ features using Java and PHP for large-scale ad platforms directly client facing.
- Developed distributed logging using Kafka pipelines and monitoring services for real-time observability, combining 20+ independent log systems.

Software Engineer, Arizona State University Oct 2024 - Present

- Upgraded a 10-year-old legacy Symfony 3.x application to Symfony 6.x LTS within 6 months, improving security and stability.
- Leveraged AI tools like Cursor and Copilot for refactoring, test generation, and faster code comprehension, increasing productivity by 70%.

TECHNICAL SKILLS

Languages: Python, PHP, Node.js, TypeScript, JavaScript, Java
Frameworks: React, Symfony, Laravel, Spring Boot
Databases: MySQL, PostgreSQL, MongoDB, Elasticsearch
Cloud & DevOps: AWS, Docker, Kubernetes, CI/CD, Jenkins, GitHub Actions
Practices: API Design, Distributed Systems, Microservices, Performance Optimization, Agile
Systems: Redis, Kafka, Linux, Git

EDUCATION

Master of Science, Software Engineering, Arizona State University, GPA: 4 Aug 2024 - May 2026
Bachelor of Engineering, Information Technology, Mumbai University, India, GPA: 3.73 Aug 2011 - May 2014

ACADEMIC PROJECTS Aug 2024 - Dec 2025

LinkedIn Profile Clustering | Python, ML: Built a BERT-based system for large-scale profile ranking.
NY Taxi Data Pipeline | Kafka, Docker, Neo4j: Designed a real-time, event-driven analytics pipeline processing millions of records.
TataScript | Prolog, Compiler Design: Built a custom programming language with grammar, compiler, and interpreter.
Diffusion Glucose Forecasting | PyTorch: Developed a diffusion model outperforming LSTM baselines on healthcare data.

Highly motivated software engineer who enjoys learning new technologies and staying ahead technically. Looking for a collaborative team where I can grow, learn, and contribute meaningfully in the next phase of my career.
