EDUCATION

University of Cincinnati, USA Master of Science, Computer Science	August 2024 - May 2026
GITAM University, India Bachelor of Technology, Computer Science	June 2016 - June 2020

TECHNICAL SKILLS

Languages:	C, C++, Core Java, Python, JavaScript, C# ,TypeScript
Web Technologies:	React.js, Redux, RESTful API, HTML, CSS, Node.js, Angular
Databases:	MySQL, PostgreSQL, MongoDB
Frameworks:	ASP.NET Core, ASP.NET, Entity Framework
Libraries & Tools:	Pandas, Scikit-learn, PyTorch,TensorFlow, Matplotlib,OpenCV, Tableau, Git ,Github
Cloud Technologies:	GCP, Azure, AWS, Docker, Kubernetes
Core Concepts:	Object-Oriented Programming ,Data Structures & Algorithms, Design Patterns

WORK EXPERIENCE

P&G Digital Accelerator – University of Cincinnati | Research Assistant – AI Projects | June 2025 – December 2025

- Collaborated with P&G’s Digital Accelerator team to develop AI-driven solutions tailored for enterprise workflows.
- Designed and implemented intelligent assistants with prompt engineering techniques that extracted structured data from user-uploaded PDFs and auto filled business templates, processing 1000+ documents.
- Integrated Tesseract OCR with AI models, improving data accuracy to 90% and reducing human effort.
- Developed an automation project using Python and Selenium to validate 500+ user-submitted form data requests, automatically updating records in enterprise tools via scripted UI workflows.

TATA CONSULTANCY SERVICES | PUNE, INDIA | SOFTWARE ENGINEER | February 2021 - July 2024

- Developed enterprise-grade, responsive web applications using ReactJS, JavaScript, HTML5, CSS3, and Material UI, improving UI/UX by 40% across business modules.
- Engineered data-driven UI components with React functional components and hooks, enabling real-time updates and consistent application state.
- Architected Redux-based global state management for authentication, user roles, and data, improving state consistency by 50%.
- Integrated secure authentication workflows using Azure AD and JWT tokens, enforcing role-based access control across multiple user roles and application modules.
- Designed scalable RESTful APIs in C# using ASP.NET Core MVC, improving performance by 60%, and performed unit testing after integrating the APIs with the front-end to ensure reliability and seamless data flow.
- Diagnosed and resolved critical production issues across frontend and backend layers, achieving a 95% resolution success rate.
- Led UI development for a team of 6 engineers, focusing on sprint planning, code reviews, and mentoring.

VERZEO | HYDERABAD, INDIA | MACHINE LEARNING INTERN | May 2019 - July 2019

- Implemented and assessed machine learning approaches for text summarization, maintaining 95% accuracy and high contextual integrity.
- Collaborated with the team to build machine learning applications, ensuring 100% alignment with client requirements.
- Enhanced client data accuracy by 50% through improved data validation and distribution techniques.

PROJECTS

RETAIL INTELLIGENCE APP– Predictive Analytics & ML using Azure Cloud

- Deployed a full-stack retail analytics application on Microsoft Azure App Service, integrated with Azure SQL Database, leveraging CI/CD-driven deployments from Git to ensure consistent and reliable releases.
- Developed and evaluated predictive machine learning models (Random Forest, 91% accuracy) to support basket analysis, churn prediction, and customer lifetime value modeling.
- Delivered a scalable Azure-hosted app combining SQL-driven analytics and interactive dashboards to power cross-sell retention and demand forecasting.

SENTIMENTSCAPE – Visualizing App Review Insights Using Temporal HeatMap and Review Count

- Built a sentiment analysis dashboard using Python and Tableau to visualize trends in Zoom, Webex, and Firefox reviews.

- Processed and classified thousands of app reviews to detect anomalies, fake patterns ,shifts in user sentiment.
- Linked product events to user feedback, enabling faster issue resolution and better feature impact insights.

NETWORK INTRUSION DETECTION USING SUPERVISED MACHINE LEARNING AND FEATURE SELECTION

- Classified network traffic as malignant or benign using SVM and ANN algorithms, achieving 95% accuracy with ANN.
- Proposed Random Classifier integration with ANN to improve accuracy beyond 95%.
- Reduced false positive rates by 20% through model fine-tuning, improving detection efficiency.

HEART DISEASE PREDICTION

- Designed a heart disease prediction model by testing Naive Bayes, KNN, Decision Tree, Linear Regression, and RandomForest classifiers.
- Achieved 93% accuracy with the Decision Tree classifier, outperforming other evaluated models.
- Leveraged Python, Pandas, and Scikit-learn for data preprocessing and visualization.

CERTIFICATIONS

- **ON THE SPOT Awards:** Received two ON THE SPOT Awards from TCS for exceptional timeline adherence and client satisfaction.
- **Fast-Track Promotion:** Achieved Fast-Track Promotion to Software Engineer from Assistant Software Engineer within 6 months, ahead of the standard 1.5-year tenure.
- **Campus Ambassador:** Served as Campus Ambassador for Verzeo, an AI-based learning platform, promoting industry readiness.
- **DISHA Active Member:** Mentored and trained students for competitive exams at GITAM University, fostering equal opportunities.
- **Certifications:** **MTA Certification:** Introduction to Programming using Python , **Accenture Certification:** Digital Skills Artificial Intelligence , **Coursera Certification:** Python for Everybody
