

OBJECTIVE: Highly skilled and results-driven **Java Full Stack Developer** with 5+ years of experience in designing, developing, and deploying dynamic web applications. Adept at working with both **front-end** and **back-end** technologies, including **Java, Spring Boot, Angular, React, and SQL**.

PROFILE SUMMARY:

- **5+ years of experience** in full-stack development with expertise in **Java, Spring Boot, Hibernate, and RESTful APIs** for building scalable and secure backend systems.
- Proficient in **front-end technologies** including **HTML5, CSS3, JavaScript, TypeScript, Angular, React, and Bootstrap** for creating responsive, interactive, and user-friendly web applications.
- **Back-end expertise** in designing and developing microservices-based architectures using **Java, Spring MVC, Spring Boot, and Hibernate**, ensuring high performance and scalability.
- Strong understanding of **RESTful APIs, SOAP services, and Web Sockets** for seamless client-server communication and real-time data exchange.
- Strong expertise in **API development, database optimization (PL/SQL), and reducing network latency** for improved application efficiency.
- Skilled in **security best practices** like **OAuth 2.0, JWT, JSON Web Tokens, and Spring Security** for implementation.
- Proficient in **AWS cloud services (EC2, S3, Lambda, RDS, DynamoDB), Azure, and Google Cloud** for deploying and managing applications in cloud-based environments.
- Hands-on experience with **databases** like **MySQL, PostgreSQL, MongoDB, and Oracle** for database design, query optimization, and data management.
- Experience in using **build tools** like **Maven and Gradle** for project configuration, dependency management, and efficient build processes.
- Skilled in **DevOps practices** including **CI/CD pipelines** using **Jenkins, Docker, and Kubernetes** for automated testing, building, and deployment of applications.
- Experienced in implementing **serverless architectures** using **AWS Lambda and Azure Functions** for cost-effective solutions.
- Proficient in unit testing using **JUnit and Mockito** to ensure high code quality and reliability through automated testing.
- Experience working in **Agile/Scrum** development environments, collaborating closely with cross-functional teams to deliver high-quality software solutions on time.
- Experience in performance tuning and database optimization to enhance application efficiency.
- Knowledge of logging and monitoring tools like **Log4J, Splunk, and AWS CloudWatch** for proactive issue resolution.
- Familiar with **GraphQL, XML, and SOAP** for efficient data communication between systems.
- Manage project tasks and requirements using **Jira** while leveraging **Git and GitHub** for version control and collaboration.
- Experience with **Swagger and Open API** for designing and documenting APIs, improving collaboration between development teams, and enhancing the integration process.
- Proficient in **Elasticsearch** for implementing advanced search functionality and real-time analytics in applications, improving data retrieval speed and accuracy.
- Experienced in using **Terraform** for infrastructure as code (IaC), automating the provisioning and management of cloud resources.

TECHNICAL SKILLS:

- **Programming Languages:** Java (8, 11, 17, 21), Python, C, C++
- **Front End Technologies:** HTML5, CSS3, JavaScript, Angular, React, jQuery, Bootstrap
- **Frameworks and Tools:** Spring (MVC, Boot, Cloud, Security, Data, Batch), Hibernate, Node.js, React.js, JUnit, Maven, Gradle, Jenkins, JIRA, Git, GitHub, Bitbucket
- **Databases:** MySQL, PostgreSQL, Oracle, MongoDB
- **Cloud Platforms:** AWS (Lambda, Dynamo DB, API Gateway, SNS, SQS, S3, EC2, RDS), Elastic Cache, Azure, GCP
- **Infrastructure Management:** Terraform, CloudFormation
- **Containers and Orchestration:** Docker, Kubernetes
- **Web/Application Servers:** Apache Tomcat, JBoss, IBM WebSphere
- **Web Services:** RESTful, SOAP, APIGEE, Amazon API Gateway
- **Monitoring and Logging:** Splunk, Log4J
- **Development Methodologies:** Agile (Scrum, Kanban), Test-Driven Development (TDD), Behavior-Driven Development (BDD)
- **Development Environments:** Eclipse, IntelliJ IDEA, RAD, Visual Studio

WORK EXPERIENCE:

Stifel Financial Corp

Java Full Stack Developer

Jan 2024 to Present

St. Louis, Missouri

Responsibilities:

- Involved in requirement gathering phase of **SDLC** with Business Analyst and worked with **Agile & TTD**.
- Developed and maintained **microservices** using **Java 21**, focusing on improving the performance and scalability of applications.
- Developed **microservices architecture** using **Java** with **Spring Boot**, **Spring Cloud**, **Spring MVC**, and **Spring IOC** with expertise in **Hibernate** for **ORM**.
- Implemented secure and scalable **RESTful** services using **Java**, enabling seamless integration with third-party applications and improving overall system performance.
- Secured **Node.js** applications by implementing data encryption, secure authentication, and API rate limiting.
- Integrated frontend technologies like **HTML**, **CSS**, **Angular**, and **TypeScript** with **Java Backend**.
- Enhanced **Angular UI** Performance with **Bootstrap**, **NGX Bootstrap**, **Material UI**, and **Material Icons**, optimizing rendering and styling.
- Integrated **Angular** components with **RESTful APIs** to ensure smooth data communication between frontend and backend.
- Developed secure **RESTful APIs** leveraging **OAuth2** and **JWT** authentication, reducing security vulnerabilities and ensuring robust access control.
- Optimized **API Performance** using **PL/SQL** stored procedures for **CRUD** operations in **Spring Boot**, improving query execution by 30%.
- Proficient in **SQL** and **PL/SQL**, writing complex queries and stored procedures for **Oracle** database.
- Optimized **NoSQL** queries to enhance data retrieval speed and performance in high-traffic applications.
- Implemented **GraphQL** for efficient data querying and manipulation in web applications.
- Built and deployed applications on **AWS** cloud using services like **EC2**, **S3**, **Lambda**, **RDS**, and **DynamoDB**.
- Implemented **CI/CD** pipelines with **Maven**, **Git**, and **GitHub**, significantly improving code quality and deployment efficiency.
- Utilized **Log4J** for logging and monitoring, enabling proactive issue detection and system performance optimization.
- Implemented testing frameworks like **JUnit** and **Mockito**.
- Employed **Jira** for seamless project management and tracking, ensuring efficient coordination across diverse software development initiatives.

Centene Corporation

Java Full Stack Developer

Feb 2023 to Dec 2023

St. Louis, Missouri

Responsibilities:

- Utilize **Agile Methodologies** to manage the full life-cycle development of the project.
- Designing and building new application components using **Java**, **Spring Boot microservices**, and **Agile** methodologies to ensure scalable and efficient solutions.
- Creating **RESTful APIs** and web services with **Spring MVC**, utilizing its annotations for streamlined request handling, data binding, and validation processes.
- Developed **REST APIs** and **microservices** to process, store, and expose **IoT** data for dashboards and monitoring systems.
- **Reduced API Round Trips** by consolidating multiple calls into a **single API**, lowering network latency by **50%**.
- Designed and implemented **microservices architectures** with **Spring Cloud**, **Spring IOC**, and **Hibernate**, enhancing system scalability and resilience for distributed banking services.
- Integrated real-time data streaming with **Kafka**, facilitating seamless data migration from **Oracle** to **DynamoDB**.
- Implemented mock backend, in **React JS** using **Typescript** for testing purposes.
- Designed and developed dynamic web applications using **ReactJS** and **NodeJS**, enabling seamless user interactions and real-time updates.
- Developed the single page application (SPA) using **ReactJS** which utilizes the classes, and modules from **JavaScript ES6**.
- Experience in developing **React** applications using **Redux** and **React Hooks**.
- Configured **Kafka** topics with appropriate partitioning and replication strategies to enhance fault tolerance.
- Integrated cloud services like **AWS S3** and **Lambda** to enhance application functionality and ensure high availability in cloud environments.
- Established **CI/CD pipelines** with **Maven**, and **Docker**, achieving efficient development cycles and code quality.
- Working with **JIRA**, which is managing project requirements and tasks, and **GitHub** for Version Control.

ICICI Prudential Life Insurance

Java Full Stack Developer

Oct 2020 to Dec 2021

Bangalore, India

Responsibilities:

- Applied **Agile** methodologies and **Scrum** practices to manage project lifecycles, ensuring timely delivery of high-priority features and fostering a culture of quality through **TDD** and **BDD**.
- Developed and maintained scalable web applications using **Java**, **Spring Boot**, **Angular**, and **Spring Data JPA** with **Hibernate**, optimizing client-side performance and data persistence.
- Designed and implemented **microservices architectures** with **Spring Cloud**, **Spring IoC**, and **Hibernate**, improving system scalability and resilience for banking services.
- Secured web applications using **Spring Security**, **OAuth2**, and **JWT**, enforcing authentication and encryption protocols to safeguard user data.
- Developed and tested **RESTful APIs** and services using **JAX-RS** and **Spring Data REST**, enabling smooth communication between client and server layers.
- Creation, enhancement, and maintenance of **PostgreSQL** database functions, including reflection of **CRUD** operations for the object model **PostgreSQL**.
- Managed **Azure** cloud migration for legacy systems, utilizing **Virtual Machines**, **Blob Storage**, **Azure SQL Database**, and **Cosmos DB** for performance and cost efficiency.
- Containerized applications with **Docker** and **Kubernetes**, enabling faster deployment, scalability, and portability across environments.
- Implemented **CI/CD** pipelines using **Jenkins**, **Maven**, and **Git**, automating build, test, and deployment processes for seamless software delivery.
- Enhanced system interoperability by implementing **SOAP** and **GraphQL**, streamlining communication across multiple financial systems.
- Developed and maintained **SQL** and **PL/SQL** scripts for database reporting and analytics, strengthening business intelligence capabilities.
- Led Agile development processes using **Rally**, driving collaboration and efficiency across the software development lifecycle.

Legacy Health

Java Developer

June 2019 to Sept 2020

Bangalore, India

Responsibilities:

- Utilized **Agile** methodologies like **Scrum** to streamline workflows, and prioritize tasks, within a structured Software Development Life Cycle (SDLC).
- Utilized **Microservices** architecture with **Spring Boot**-based services interacting through a combination of **REST APIs**.
- Integrated **Hibernate ORM** framework for efficient database operations and object-relational mapping.
- Worked on front-end technologies including **HTML5**, **CSS3**, **JavaScript**, **Angular**, **Node.js**
- Implemented **AJAX** calls to dynamically fetch and update data from the server without reloading the page, improving user experience and reducing response time.
- Utilized **PostgreSQL** database for data storage and retrieval, ensuring integrity and security.
- Designed and developed necessary **PL/SQL** for the database operations as needed.
- Designed workflows using **AWS** services like **EC2**, **EKS**, **ECS**, **S3**, **DynamoDB**, **RDS**, **Lambda**, **API Gateway**, **CloudFront**, **SNS**, and **SQS**.
- Employed **Jenkins** for CI/CD pipelines and utilized **Maven** for build automation.
- Implemented **Docker**, and **Kubernetes** for container orchestration.
- Actively participated in code reviews, providing constructive feedback to enhance code quality and maintainability.
- implemented **Log4j** for logging and monitoring and utilized Terraform for infrastructure as code.
- Developed automated testing scripts using **JUnit** and **Mockito** to improve testing coverage and efficiency.
- Managed project documentation using **Jira** and Leveraged **GitHub** for version control.

EDUCATION:

Northwest Missouri State University

Master of Science in Computer Information Systems

Jan 2022 – Dec 2023

Maryville, Missouri
