

ADAM NGUYEN

Beaverton, OR (Portland Metro)

503-319-4884 nguyenadamq@gmail.com [linkedin.com/in/adam-q-nguyen](https://www.linkedin.com/in/adam-q-nguyen) github.com/nguyenadamq

Education

Oregon State University

B.S. Computer Science, GPA: 3.63 / 4.00

Expected Graduation: June 2026

Corvallis, OR

Relevant Coursework: Operating Systems, Discrete Mathematics, Algorithms, Databases, Software Engineering I/II, Advanced Web Development, Networking, Data Structures

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, C, C++
Frontend: React.js, HTML, CSS
Backend: Node.js, Express.js, REST APIs, AsyncIO
Databases: PostgreSQL, MySQL, Microsoft SQL Server, SQLite
Cloud & Deployment: Docker, AWS EC2
Tools: Git, GitHub Actions (CI/CD), Docker

Experience

Qorvo

June 2025 – Dec 2025

Software Engineering Intern

Hillsboro, OR

- Built internal backend applications to automate engineering workflows and improve platform reliability across cross-functional teams.
- Implemented Python + SQL validation pipelines, reducing invalid production submissions by **35%** and accelerating review cycles.
- Delivered reusable backend components adopted by senior engineers, improving maintainability and consistency across multiple systems.

In Time of Need (Volunteer Platform)

2025 – Present

Software Engineer (AI Agent Development)

Corvallis, OR

- Developed an **AI/LLM-powered agent** to automatically search, extract, and classify critical community service resources at scale.
- Built end-to-end data normalization workflows, transforming noisy web sources into structured records in **Sanity CMS**.
- Added scoring, validation, and recency enforcement, improving reliability of surfaced results and reducing outdated resource matches.

Projects

Job Board Tracker | *Python, AsyncIO, SQLite, Docker, AWS EC2, Public APIs* | GitHub

2025 – Present

- Engineered a production-style backend monitoring platform tracking job postings across **1,000+ company boards** in real time.
- Built high-concurrency asynchronous ingestion services, improving throughput and reliability under strict API rate limits.
- Containerized and orchestrated multi-worker pipelines with **Docker Compose**, enabling one-command deployment and repeatable execution.
- Deployed on **AWS EC2** with persistent state management, preventing duplicate alerts and delivering continuous Discord notifications for newly posted roles.

Corvallis Housing Bot | *Python, AWS EC2* | GitHub

2025

- Deployed an automated ingestion and ranking pipeline to surface real-time housing opportunities faster than manual search.
- Hosted the service on **AWS EC2** with long-running execution, structured logging, and recovery handling for continuous uptime.

Task Pilot | *React, Express.js, Node.js, PostgreSQL*

2025 – Present

- Developed a full-stack productivity platform enabling users to manage tasks with scalable scheduling and workflow optimization.
- Designed and implemented RESTful backend APIs with **PostgreSQL** persistence, supporting reliable CRUD operations and future growth.
