SUMMARY

Entry-level Software Engineer with a strong foundation in **Java**, Python, and core computer science principles, including data structures, operating systems, and networking. Experienced in developing, debugging, and enhancing backend-driven applications and data pipelines within existing software architectures. Comfortable working in large codebases, following design specifications, and building reliable, maintainable software in Agile environments.

EDUCATION

San José State University

San Jose, CA

– GPA: 3.64; President's List, Dean's List

– Relevant Coursework: Data Structures & Algorithms, Object-Oriented Design, Database Management, Operating Systems, Computer Networks, Information Security

Aug 2022 – Dec 2025

Bachelor of Science in Software Engineering

EXPERIENCE

Software & Data Engineering Intern

H.U.G. Reading Organization

- Designed and enhanced backend analytics workflows using **SQL**, operating within existing data architectures to support reporting and operational decision-making.
- Implemented input validation, logging, and automated data integrity checks to improve pipeline reliability and correctness.
- Diagnosed and resolved data inconsistencies by tracing execution paths and validating edge cases.
- Worked in an **Agile** environment, documenting system behavior and workflows to improve maintainability and onboarding.

Research Assistant — OCR Automation

San José State University

- Developed **Python**-based automation scripts to validate OCR outputs against source documents, ensuring accuracy and repeatability.
- Evaluated AI-powered OCR tools by measuring accuracy, failure cases, and reproducibility across multiple runs.
- Improved preprocessing, validation logic, and error handling to increase system reliability and deterministic behavior.
- Documented workflows and collaborated with researchers to deliver tested, maintainable solutions aligned with project requirements.

Software Engineering Intern

Omni-Tech Solutions

- Developed and tested application features using **JavaScript, HTML, CSS, and PHP** within an existing codebase.
- Diagnosed and resolved backend and frontend defects by analyzing logs, tracing execution flow, and validating fixes.
- Participated in peer code reviews, applying clean code principles and basic testing practices to improve code quality.
- Contributed to sprint planning and feature delivery in an Agile software development lifecycle.

May 2025 – Aug 2025

San Jose, CA

Mar 2025 – Present

San Jose, CA

Jul 2024 – Oct 2024

San Jose, CA

PROJECTS

Stock Market Data Web Application | Python, Flask, REST APIs

- Built a backend-driven application to retrieve, validate, and serve financial data via REST APIs.
- Implemented structured error handling, logging, and input validation to ensure predictable system behavior.
- Applied object-oriented design principles to create modular components that improved readability and maintainability.

AI Grammar Analysis Tool | Python, Streamlit

- Developed an AI-assisted application to analyze text and generate structured feedback.
- Focused on testing output consistency, handling invalid inputs, and improving system stability.
- Automated processing steps to reduce manual intervention and improve execution efficiency.

Jan 2025 – Mar 2025

Jan 2025 – Mar 2025

ORGANIZATIONS

Hoplite Club | Secretary

- Organized technical workshops and coordinated collaboration across members.
- Maintained documentation and improved internal communication workflows.

Tau Beta Pi — Engineering Honor Society

- Recognized among the top 12.5% of engineering students for academic excellence.

Jun 2025 – Present

Mar 2024 – Present

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, HTML/CSS, PHP, SQL

Backend & APIs: REST APIs, Flask, object-oriented programming, automation

Databases: SQL, data validation, query optimization (basic)

Cloud & Platforms: AWS (EC2, QuickSight), Linux, macOS

Dev Tools: Git, GitHub, Jira, logging, build and test pipelines

Engineering Practices: Agile/Scrum, debugging, testing, documentation, clean code
