

SUMMARY

AWS-certified software engineer with hands-on experience building serverless AWS workflows, CI/CD automation, and containerized environments. Proven in Docker, Git/GitHub, cloud services (AWS/GCP/Azure), scripting automation (Bash/PowerShell), logging/observability, and security-first practices (least privilege, OAuth, access control).

Experience

IT Software & Systems Support Analyst,
University of Massachusetts Boston

Jan 2025 - Present

- Reduced repetitive support work by writing/running **Bash + PowerShell scripts** to automate common fixes and configurations.
- Improved access reliability by **managing 15,000+ Azure Active Directory accounts** to keep provisioning, groups, and permissions correct.
- Reduced successful phishing incidents by ~35% by **educating users on phishing recognition** and safe security practices.
- Communicated technical troubleshooting clearly to non-technical users and documented these issues.

Software Engineering Intern,
Software Application and Innovative Lab @ Boston University

Feb 2025 – Aug 2025

- Increased environment reliability by **containerizing services** with **Docker** to ensure consistent, reproducible development/testing setups.
- Improved system observability** by adding **Langfuse tracing** to LLM pipelines to monitor performance, cost, and usage in real time.
- Enabled data-driven tuning using **PostgreSQL** to store user history + analytics to track cost-usage trends.
- Participated in solution/design discussions** by explaining technical issues to technical stakeholders and non-technical stakeholders in plain language.

AI Software Engineering Fellow,
Headstarter AI

Jul 2024 – Sept 2024

- Improved delivery reliability by adding **CI/CD** with **GitHub Actions** to **automate testing** and deployment.
- Shipped 5 full-stack AI web apps **collaborating with 3 software engineers** in weekly sprints using **Next.js**, Node/Express, **Google Cloud Platform (GCP)** to deliver end-to-end features fast.
- Scaled an app to 70+ users by using **GCP services (Firestore/Cloud Storage)** to support auth, storage, and routing reliably.

Projects

Heart Rate Monitor -

cs-410-sp-2025-hrm-3.vercel.app | github.com/Moiz-Amjad/CS410-SP2025-HRM3

- Secured user health profiles by integrating **Google Authentication (OAuth)** to isolate biometric data within unique user database paths.
- Minimized data latency to <50ms** by integrating **Firebase Realtime Database** for seamless streaming of heart rate data between the **ESP32** and web dashboard for real-time visualization..
- Accelerated deployment cycles by configuring a **GitHub-to-Vercel CI/CD pipeline** for automated testing and production updates.

Serverless Expense Tracker -

github.com/Moiz-Amjad/Serverless-Expense-Tracker

- Automated financial data collection by architecting a serverless **AWS Lambda function** that filters Gmail API payloads for transaction keywords like “receipt” and “payment.”
- Optimized storage scalability by storing ingested email metadata as **JSON objects** in **Amazon S3** indexed by unique user IDs, and triggering cloud functions via **AWS SDK v3** from server-side API routes.
- Hardened security/ops by integrating **Amazon Cognito (AWS Amplify)**, implementing **IAM least-privilege + env var management**, and configuring **CloudWatch logging** to troubleshoot ingestion performance and API failures.

Skills

Cloud: AWS (EC2, Lambda, S3, Cognito, CloudWatch), GCP, Azure
DevOps: Docker, CI/CD, Git/GitHub, Linux, Bash, PowerShell, Vercel
Backend: Node.js, Express.js, REST APIs, serverless functions, JSON, AWS SDK v3
Data: PostgreSQL, MongoDB, Firebase/Firestore
Frontend: React, Next.js, TypeScript, JavaScript
Security: IAM least privilege, OAuth-based authentication, secure environment variable management, phishing awareness training, security groups
Deep Understanding: VPC, RDS, Kubernetes, EKS, ECS, AWS Budgets, CloudFormation (IaC), Networking

Certifications

AWS Certified Solutions Architect Associate | CodePath Cybersecurity Certificate

Education

University of Massachusetts Boston | B.S. in Computer Science | Honors College

Expected Graduation - May, 2026

GPA 3.85
