

Jason Ikenaga

📞 707-980-8864 — 📍 Baltimore, Maryland 21201 — 🌐 JasonIkenaga — ✉ Jason.Ikenaga@gmail.com

Summary

Strong experience in software development, machine learning, and full-stack web and mobile applications. Proficient in Python, JavaScript, and SQL, with projects including neural network, backend API development, and mobile applications. Experienced in building and integrating databases for data collection and analysis. Skilled in collaborative development using GitHub, with a solid foundation in both backend systems and front-end interfaces.

Skills

- **Libraries** | Numpy, Pandas, Plotly, JavaFX
- **Framework** | React/React Native, NodeJS, Flask
- **Databases** | mySQL, Firebase, AWS
- **Operating Systems** | Windows, Linux, IOS/macOS
- **Machine Learning** | pyTorch, Sci-Kit Learn, TensorFlow
- **Other** | Communication, Teamwork, Git, Problem Solving

Relevant Experience

US ATLAS Student Researcher

Oct 2022 – May 2023 | Aug 2023 – May 2024

Washington College | Chestertown, MD

- Created particle physics lab involving cluster computing for physics analysis at Washington College. Used Bash/Linux to develop software for the lab
- Built Shrestha Lab website using HTML and CSS seen here: <https://theshresthalab.github.io/>
- Developed web application using Flask and Docker which would connect to Raspberry Pi based sensors and live graph temperature and humidity

Lab Technician

May 2022 – May 2023

Washington College Watershed Innovation Lab | Chestertown, MD

- Used Arduino based rovers to collect data for heat mapping and water quality
- Designed and built a Python-based backend data collection system and API, integrating it with a JavaScript-based front-end auto-mapping tool for seamless data visualization and interaction

Kitchen Crew Member

Oct 2024 – Current

Chipotle Mexican Grill | Pikesville, MD

- Consistently used professional communication in a fast paced environment
- Had to manage my time almost perfectly while working as a team to reach our daily goals

Education

Washington College

2020 – 2024

Bachelors of Science in Computer Science and Mathematics

Magna Cum Laude
GPA 3.8 | STEM 3.9

Projects

Chess Neural Network

Aug 2023 – May 2024

Senior Capstone Experience

- Created a neural network using pyTorch that would take a chess position as input and outputted a predicted next best move
- Trained network on over 1,000,000 data points web scraped through an original decompression algorithm
- Created a recursive algorithm that connected to the neural network to try to find checkmates within 3 moves.
- Neural network expressed general chess patterns, although was not close to perfect

WAC Connect

Jan 2023 – May 2023

Software Engineering Class Project

- Created an app designed to allow 1,000+ Washington College students to form and join study groups for their classes
- Collaborated with my team of 3 members applying agile methodology, using React Native and JavaScript for app development, contributing over 50% of the code

Bikeshare App

Washington College

- Collaborated within a team to create an app that all 1,000+ could use to rent bikes
- Developed app in Javascript using React Native, that worked on Android OS and IOS

Decision Tree Algorithm

Washington College

- Developed my own machine learning algorithm, with a decision tree that used a different equation to sort outcomes
- Performed 20% better on larger data science datasets than some of the previous decision tree algorithm
