

Prashanthi

Java/J2EE Developer/ Full Stack Developer | U.S. citizen
Email: prashanthi4268@gmail.com | Phone: 786-567-7198

PROFESSIONAL SUMMARY

- Accomplished **Java Full Stack Developer** with 8+ years of proven expertise in designing, developing, and deploying scalable enterprise applications.
- Expert in applying **Java, Spring, and Hibernate** to build highly robust and efficient software solutions.
- Experienced in front-end development with **React.js and Angular**, building responsive and user-friendly interfaces.
- Skilled in designing and developing **RESTful and GraphQL APIs** for efficient data access and integration.
- Adept in the integration of cloud-native solutions on **AWS and Azure**, leveraging services to ensure high availability and optimize costs.
- Expert in implementing asynchronous messaging and event-driven systems using **Apache Kafka, RabbitMQ, and JMS** to support real-time data processing.
- Strong database skills with experience in **MySQL, MongoDB, and Oracle**, focusing on query optimization and performance tuning.
- Hands-on expertise in DevOps practices, automating CI/CD pipelines with **Jenkins, Gradle, Maven, Terraform, and Azure DevOps**.
- Hands-on experience in containerization with **Docker** and orchestration using **Kubernetes**.
- Committed to writing clean, secure, and maintainable code while enforcing best practices and code quality standards.

TECHNICAL SKILLS

Languages & Markup: Java (J2EE, SE), JavaScript (ES6+), TypeScript, SQL, PL/SQL, HTML5, CSS3
Frameworks & Libraries: Spring (Core, Boot, MVC, AOP, Batch, Security), Hibernate ORM/JPA, React.js, Redux, React Router, Angular, Bootstrap, Material UI, jQuery
Web Services & APIs: RESTful APIs, GraphQL, SOAP/WSDL, WebSocket, gRPC
Cloud & Container Platforms: **AWS** (EC2, S3, RDS, Lambda, API Gateway, Auto Scaling, CloudFormation), **Azure** (App Services, Logic Apps, Functions, DevOps, Active Directory), Docker, Kubernetes
Databases & Messaging: MySQL, MongoDB, Oracle Database, Apache Kafka, RabbitMQ, JMS
DevOps, CI/CD & Monitoring: Gradle, Maven, Terraform, Jenkins, Azure DevOps, SonarQube, ELK Stack
Security, Version Control & Tools: OAuth 2.0, Spring Security, Swagger, Git, JIRA, Postman
Methodologies: Agile, Scrum, Kanban

PROFESSIONAL EXPERIENCE

Java/J2EE Developer | Full Stack Developer | Alliant Credit Union, Chicago, IL | August 2022 - Present

- Spearheaded scalable backend microservices with **Java and Spring Boot**, supporting a 25% increase in transaction volume without performance degradation.
- Optimized **Hibernate**-based data access, reducing query times by 30%, enabling faster transaction processing and improved user experience; Leveraged Java **multi-threading** to enhance concurrency, increasing throughput by 15% during peak loads.
- Built and maintained **GraphQL APIs and RESTful microservices**, enhancing client-side data retrieval speed by 20% and increasing API flexibility.
- Deployed and managed applications on **AWS EC2, S3, and RDS** with **cloud-native deployments**, leveraging **Auto Scaling, AWS Lambda, and AWS API Gateway** for resilient and cost-effective infrastructure.
- Achieved a 35% increase in real-time data throughput by integrating **gRPC** and **Apache Kafka** for optimized communication and processing.
- Built dynamic user interfaces using **React.js, Redux, and React Router** and ensured seamless navigation and efficient state management in complex web apps.
- Styled web components with **Bootstrap** and implemented modern **JavaScript (ES6+)** features to enhance UI responsiveness and maintainability.
- Documented APIs using **Swagger**, facilitating clear communication and faster onboarding for cross-functional teams.
- Automated build and deployment pipelines with **Jenkins** and **Gradle**, streamlining CI/CD processes for rapid and reliable software releases.
- Managed infrastructure as code using **AWS CloudFormation**, enabling consistent and repeatable cloud resource provisioning.
- Enforced code quality and security compliance through **SonarQube** scans and **Spring Security**, decreasing vulnerabilities by 30%.
- Containerized applications using **Docker** and orchestrated with **Kubernetes**, improving deployment scalability and reducing environment drift by 25%.
- Led **sprint planning** and **backlog grooming** sessions using **JIRA** to ensure timely feature delivery and cross-team alignment.
- Collaborated with cross-functional teams using **Git** for version control, ensuring seamless code integration and conflict resolution.

Environment: Java, Spring Core, Spring Boot, Hibernate, GraphQL, AWS, Apache Kafka, React.js, Bootstrap, JavaScript (ES6+), Swagger, Jenkins, Gradle, SonarQube, Spring Security, Docker, Agile, JIRA, Git.

Java/J2EE Developer | Dwolla, Des Moines, IA | October 2020 - July 2022

- Built microservices with **Spring Boot**, boosting system throughput by 35% and cutting latency by 20%, enhancing customer experience.

- Designed and implemented modular **microservices** with **Spring AOP** for logging, security, and transaction management, increasing service maintainability and traceability.
 - Utilized **Hibernate ORM** and integrated **MongoDB**, improving query performance by 30% and enhancing data flexibility by 40%.
 - Developed and maintained batch processing jobs using **Spring Batch** for scheduled data transformations and report generation.
 - Implemented **RabbitMQ** for asynchronous messaging, improving responsiveness by 22% and enabling better service decoupling.
 - Contributed to full-stack development using **Angular, TypeScript, Tailwind CSS, HTML5, and AJAX**, improving front-end performance and visual consistency across platforms.
 - Leveraged **AWS EC2, S3, RDS, and Lambda** with **Auto Scaling**, achieving 90% uptime and reducing infrastructure costs by 15%.
 - Automated CI/CD pipelines with **Jenkins and Terraform**, reducing deployment time from hours to under 15 minutes and ensuring consistent environment setups.
 - Deployed applications on **Apache Tomcat**, fine-tuning configurations for optimized runtime performance and memory management.
 - Monitored applications using **ELK Stack**, decreasing incident response time by 30% through proactive log analysis.
 - Implemented **OAuth 2.0** authentication, reducing security incidents by 40%.
 - Used **Git** for version control and **Postman** for API testing to ensure the quality and consistency of service interactions.
 - Worked within **Agile** and **Scrum** methodologies, attending daily stand-ups, sprint planning, and retrospectives via **JIRA** to track tasks and ensure timely project delivery.
- Environment:** Java, Spring Boot, RESTful APIs, Hibernate, AWS, RabbitMQ, Angular, TypeScript, Tailwind CSS, Jenkins, Terraform, Apache Tomcat, ELK Stack, Git, Postman, Agile, Scrum, JIRA.

Java Backend Developer | Rebag, New York, NY | December 2018 - September 2020

- Developed and maintained scalable **Java backend services** using the **Spring Framework**, leveraging **Dependency Injection (DI)** and **Inversion of Control (IoC)** for modular and testable application architecture.
 - Developed cloud-native **RESTful APIs** and **microservices** to deliver high-performance, scalable applications.
 - Integrated **JPA** for object-relational mapping and optimized database interactions with **MySQL**, reducing query response times by 25%.
 - Deployed services on **Azure App Services** and managed workflows with **Azure Logic Apps, Functions, and DevOps** for scalable, resilient cloud operations.
 - Engineered secure authentication and authorization with **Azure Active Directory (Azure AD)**, ensuring robust identity governance across services.
 - Implemented **WebSocket** protocols to support real-time data feeds and notifications, enhancing user engagement.
 - Contributed to front-end development by creating UI components using **HTML5, CSS3, Material UI, JavaScript, and jQuery**, optimizing for a superior user experience.
 - Implemented automated **CI/CD pipelines** with **Azure DevOps** to accelerate and streamline production releases.
 - Deployed and managed applications on **JBoss Application Server**, fine-tuning configuration for performance and reliability.
 - Wrote and maintained unit tests using **JUnit**, increasing code coverage and reducing post-release defects through rigorous testing practices.
 - Worked in a fast-paced **Agile** environment, actively participating in **Scrum** ceremonies and cross-functional sprint planning to align deliverables with business goals.
- Environment:** Java, Spring, RESTful APIs, Microservices, JPA, MySQL, Azure, WebSocket, HTML5, CSS3, Material UI, JavaScript, jQuery, CI/CD, JBoss Application Server, JUnit, Agile, Scrum.

Java Developer | Cosmico Studios, Miami, FL | June 2017 - November 2018

- Developed scalable and maintainable Java-based web applications using **Java, Spring MVC, and Hibernate ORM**, ensuring seamless integration with enterprise-grade systems.
 - Designed and consumed **SOAP web services** and created comprehensive **WSDL** definitions to support B2B integrations across client platforms.
 - Utilized **Java Messaging Service (JMS)** to implement asynchronous message processing, improving system responsiveness and decoupling backend services.
 - Wrote complex **SQL** queries and optimized stored procedures using **PL/SQL** in **Oracle Database**, improving database interaction speed by 20%.
 - Created dynamic front-end components with **JSP**, enhancing user interaction and reducing client-side rendering load.
 - Improved code quality and reduced bugs through adherence to **SOLID principles**, rigorous code reviews, and comprehensive unit testing.
 - Used **Maven** for robust project builds and streamlined dependency management, significantly improving CI/CD efficiency.
 - Facilitated **Agile** ceremonies and used **Kanban** to streamline workflows, boosting team collaboration and delivery speed.
- Environment:** Java, Spring MVC, Hibernate ORM, SOAP, WSDL, JMS, SQL, PL/SQL, Oracle, JSP, Maven, Agile, Kanban.

EDUCATION
Master of Computer Applications (MCA) St. Ann's Degree & PG College for Women, India.
