EDUCATION

University of South Florida

December 2025

Bachelor of Science in Computer Science, **GPA: 3.9/4.0**

Relevant Courses: Data Structures, Analysis of Algorithms, Software Engineering, Operating Systems, Database Design, Advanced OOP in C++, Computer Architecture, Computer Logic & Design, Affective Computing

Awards & Certifications: AWS Certified Cloud Practitioner, USF Dean's List (Spring 2022 – Fall 2025)

TECHNICAL SKILLS

Languages: Python, Go, C/C++, JavaScript, SQL

Infrastructure: Node.js, Kafka, Spark, Docker, Kubernetes, Redis, PostgreSQL, MongoDB, AWS, Elasticsearch, Jenkins

AI/ML & Data: PyTorch, TensorFlow, LangChain, NumPy, Pandas, Hugging Face, Power BI, AWS SageMaker

EXPERIENCE

Dell Technologies - Software Engineer Intern | Round Rock, TX

May 2025 – Aug 2025

- Eliminated **15+ hours/week** of manual tracking by building backend services in Python that exported **40,000+** purchase orders from Quickbase to Jira with automated approvals and status tracking
- Reduced NetBox lookup latency from **~24h to under 5 mins** by replacing REST polling with GraphQL, enabling real-time visibility into space/power utilization data across **25+ labs**
- Standardized Jira and Tableau API access for **5+ teams** by building REST API client libraries with Vault-based token storage to simplify authentication and request handling
- Automated build process by implementing **CI/CD** pipelines in Jenkins to deploy Dockerized services on Linux node

Tenex Software Solutions - Software Engineer Intern | Tampa, FL

Aug 2024 – May 2025

- Detected **75+** security vulnerabilities by developing Go microservices with fault-tolerance and retry mechanisms to process NVD security data and store results in MongoDB
- Improved execution time by **40%** by optimizing PostgreSQL queries with restructured composite indexes and joins
- Resolved **20+** data-binding defects in VB.NET and DevExpress modules, enhancing stability of client applications

AgWise - Machine Learning Intern | St. Petersburg, FL

Jun 2024 – Aug 2024

- Achieved **89.7%** prediction accuracy in corn commodities trading by implementing **Random Forest model** with 60 decision trees, trained on technical indicators such as RSI and Momentum
- Boosted sentiment accuracy of FinBERT LLM by **30%** through fine-tuning model on labeled commodity-news articles
- Cut **\$8K** in hardware costs by deploying models in the cloud (AWS SageMaker) and exposing endpoints via FastAPI

PROJECTS

BullSublease | bullsublease.com | Express.js, React, Firebase, Google Maps API, AWS

May 2025

- Developed full stack web app with Express.js, React, and Firebase for students to sublease apartments, providing secure authentication, real-time messaging, and Google Maps visualization, connecting **150+ students**
- Reduced load time from **5s to 1.1s** by deploying backend on EC2, frontend on S3, and utilizing CloudFront as a CDN

SupplyStream | Python, Kafka, Spark, Hugging Face, Elasticsearch

Jan 2025

- Built real-time ETL pipeline for supply chain disruption monitoring that ingests FreightWaves news into Kafka and uses Spark Streaming with Hugging Face models to classify events by topic, geography, and disruption
- Indexed events into Elasticsearch and built Kibana dashboards to filter disruptions by region and impact level

QuillAI | Express.js, Next.js (TypeScript), Redis, Qdrant, OpenAI

Nov 2024

- Designed **Retrieval-Augmented Generation (RAG)** chat application that processed uploaded PDFs into vector embeddings using OpenAI and stored them in Qdrant DB for semantic search
- Engineered Express backend using Redis queues to process documents asynchronously, enabling real-time Q&A

LEADERSHIP

Teaching Assistant | University of South Florida

Jul 2024 – Present

- Mentored 36 students on Agile SDLC and UML concepts in Software Engineering course, improving grades by **12%**
