SUMMARY

Full Stack Developer / AI-Integration Engineer with 5+ years delivering cloud-native web applications on AWS. Experienced building scalable Python backends (Django, FastAPI, Flask) and responsive frontends (React/Vite), with secure REST/WebSocket APIs, microservices, and reliable database integrations (RDS/PostgreSQL, DynamoDB). Strong track record designing event-driven and workflow-based systems (Step Functions, EventBridge, SQS/SNS, webhooks) with an automation-first approach using IaC (CDK/SAM/Terraform), CI/CD (GitHub Actions/GitLab), and automated testing (Pytest/Moto/Jest) and code scanning (SonarQube, CodeRabbit, CodeGuru). Built and deployed production LLM-powered applications using OpenAI APIs with a focus on performance, observability, cost optimization, and security best practices.

TECHNICAL SKILLS

- **Integration & APIs:** REST, WebSockets, Webhooks, OpenAPI/Swagger, API Gateway, middleware patterns, ETL-style sync workflows, FastAPI, Flask, Django, Express
- **Automation & Orchestration:** AWS Step Functions, scheduled workflows, event-driven pipelines, GitHub Actions, AWS Codepipeline, GitLab CI/CD
- **AWS:** Lambda, API Gateway, EC2, ECS, Cognito, Lex, Connect, EventBridge, SQS, SNS, S3, DynamoDB
- **Security:** JWT, OAuth2/OIDC concepts, Cognito User Pools/IdPs, IAM least-privilege, cryptography, helmet, FastAPI Security, Django/DRF
- **Data:** RDS (MySQL), DynamoDB, MongoDB, SQL optimization, stored procedures
- **IaC & Quality:** AWS CDK, SAM, CloudFormation, Terraform, SonarQube, Lambda Powertools, Confluence, Mypy, Pydantic
- **Testing & Tools:** Pytest, Moto, Unittest, Jest, Coderabbit, CodeGuru

CERTIFICATIONS

- AWS Certified Cloud Practitioner (2023)
- AWS Certified Developer Associate – DVA-C02 (2023)

EDUCATION

- **City College of New York, 2020-2021**, Masters degree

PROFESSIONAL EXPERIENCE

Intervision Systems | Fullstack Cloud Architect | AWS, Python, Typescript | Jan 2025 - Oct 2025

- Collaborated with multiple clients to migrate and modernize CCaaS solutions on AWS, aligning architecture to security, reliability, and scalability requirements.
- Built an internal Django admin/config portal to manage platform configuration (rubrics, prompts, feature flags) and support operational workflows with role-based access.
- Built Django-based dashboards to monitor call-center workflows and system health (CloudWatch-driven metrics) with role-based access.
- Developed a secure Python backend using FastAPI (request validation with Pydantic,

OpenAPI/Swagger docs, clean routing/service layers) deployed behind API Gateway + Lambda; infrastructure provisioned via AWS CDK.

- Integrated frontend-to-backend APIs (auth/session handling, request/response contracts), improving UX performance via caching, loading states, and resilient retries for network variability.
- Designed and Developed Customer-First Callback Solution, incorporating AWS StepFunctions, Lambdas, DynamoDB tables, SNS, Connect & SQS Queues for an optimized, event-driven solution.
- Developed AI-incorporated QnA chatbots and interface using Amazon Lex, Bedrock with Claude Sonnet, DynamoDB, React and State Machine.
- Developed and owned TypeScript Lambdas (Node.js 23) using AWS SDK V3, strict typing, and middy/powertools; delivered infrastructure via reusable CDK TypeScript constructs.
- Created reusable CDK (TypeScript) constructs for API Gateway + Lambda + DynamoDB + Cognito patterns.
- Developed complex AI workflows using Kendra for web scraping, and Claude for RAG query-time answer generation alongside guardrail policies and specific metric threshold tuning alongside minimal human reviews to ensure quality and consistency.
- Implemented CodeRabbit, CodeGuru & other AI tools in CICD workflows for code quality control.
- Collaborated with stakeholders to gather and understand business and technical requirements.
- Developed secure REST APIs using Apigateway, Cognito, Lambdas, VTL Mapping templates
- Created CICD workflows for clients using both GitHub Actions/Workflows to recreate production environments in lower environments for adequate testing and development.
- Created highly distributed and scalable systems using SQS, Eventbridge, and SNS.
- Designed and documented work on Confluence, emphasis on code reviews and held KT sessions.

Kforce/Kemper | AWS Connect Consultant | AWS, Python | Mar 2024 - Dec 2024 Remote

- Designed, developed and implemented an end-to-end CCaaS features, including automation throughout the different environments, unit and integration testing.
- Implemented estimated wait time solution, providing callers an approximate number of minutes they will be waiting in queue.
- Developed a customer-first callback solution where we offer available time slots throughout the day to customers and give them a call during that time slot if an agent is available, otherwise we route them to voicemail.
- Created post-call survey feature for callers
- Implemented DevOps process to incorporate rollback mechanisms and precise error handling using version control, logging and monitoring.
- Built tooling that was adaptive to meet the changing requirements of the client.
- Created design documentation for the automation process along with a runbook and technical documentation for the underlying code and processes alongside holding KT sessions and demos with the team.
- Used tools such as Draw.IO, Powerpoint & Confluence for design and architecture.

Cognizant | Fullstack/Amazon Connect Developer | Feb 2022 - November 2023 Remote

- Delivered multiple cloud-based migration and integration projects across multiple end clients, tailoring architectures and automation to different business requirements, timelines, and compliance constraints.
- Built and integrated AI-incorporated QnA chatbots and interfaces using Amazon Lex + Bedrock (Claude Sonnet) with DynamoDB persistence and Step Functions orchestration; implemented a React UI for streamlined user interaction and operational workflows.

- Designed more advanced AI workflows leveraging Kendra for content ingestion/web sourcing and Claude for RAG answer generation, including guardrail policy alignment, metric threshold tuning, and lightweight human review loops to maintain response quality and consistency.
- Developed multiple AWS Lambda services using Boto3 to automate workflows, integrate services, and reduce manual operational overhead.
- Built and integrated AWS Lex chatbots with Lambda backends to automate customer interactions and route intent-based workflows
- Configured Amazon Connect components (contact flows, queues, routing profiles, hours of operation) and integrated with backend systems for end-to-end automation.
- Shipped infrastructure via reusable CDK (TypeScript/Python) constructs, including standardized patterns for API Gateway + Lambda + DynamoDB + Cognito, accelerating delivery and ensuring consistent security/auth across projects.
- Implemented authorization patterns using Cognito User Pools/IdPs and custom authorizers, supporting secure access and token-based workflows
- Strengthened engineering quality gates by integrating CodeGuru, CodeRabbit, and related tooling into CI/CD workflows to improve code review throughput, reduce defects, and enforce consistent standards.
- Produced runbooks and system documentation in Confluence, and maintained strong client communication to define integration requirements.

PROJECTS/FREELANCE

InterviewMentor.io | Fullstack AI Engineer | AWS + OpenAI + CDK + React | Dec - Jan 2025

- Built a scalable LLM-powered interview simulation platform integrating OpenAI APIs to generate prompts, evaluate responses, and deliver structured feedback.
- Developed a secure backend using API Gateway (REST) + Lambda, with infrastructure provisioned via AWS CDK (Python) for repeatable, production-grade deployments.
- Implemented CI/CD with GitHub Actions, including automated test execution and deployment workflows with environment-based configuration.
- Designed for scalability and reliability using serverless patterns and modular services; ensured consistent API contracts and maintainable integration points for future feature expansion.
- Built the React/Vite frontend with reusable components and clean state management for a responsive interview experience (session flow, results/feedback views, error handling).
- Integrated frontend-to-backend APIs (auth/session handling, request/response contracts), and optimized UX performance via client-side caching, loading states, and resilient retries for network variability.
- Implemented Stripe webhook integrations to automate order/payment processing (e.g., payment succeeded/failed, refunds), ensuring idempotent processing, secure signature verification, and reliable downstream updates.
- Integrated SendGrid for transactional + promotional email campaigns (templates, segmentation, unsubscribe handling), using event callbacks/webhooks to track deliverability signals (delivered/bounced/complaints) and improve messaging workflows.

Integrations: Stripe webhooks, SendGrid (Twilio) email APIs/webhooks, event-driven automation, secure callback handling.
