INTERESTS

- 📄 Self Hosting
Postiz, Dozzle, Ackee, n8n, Twenty
- 🔗 Open Source
NeoVim, ActivePieces, Omarchy
- 🤖 AI
Agents, OpenCode, BMAD, Gemini CLI

SKILLS

- Languages:
Go, Java, Python, C, SQL (Postgres), Typescript, HTML, CSS, Javascript
- Frontend
React, State Management, Tailwind
- Backend
Microservices, RabbitMQ, Redis
- AI
AI Agents, Prompt Engineering, RAG
- DevOps & Infrastructure
Linux, Docker, Kubernetes, n8n, Actions
- Systems Architecture
RESTful APIs, Event-Driven, Test-Driven
- Tools
Git, Jira, Figma, Postman, CLIs, TUIs
- Cloud
Google Cloud Platform, Oracle, Vercel
- Other
Data Structures, Algorithms, Vim Motions

LANGUAGES

- | | |
|---------|--------------|
| Spanish | Japanese |
| Fluent | Intermediate |

I get curious by doing whether it's learning k3s with a homelab or exploring cloud providers by self-hosting opensource applications.

EXPERIENCE

TechLead NYC	New York, NY (Remote)
Automation Engineer (Freelance)	Jan 2026 - Present

- Architected an end to end event management and accountability system using n8n to resolve low attendee retention for a professional networking group.
- Increased event attendance by 150% (from 12 to 30 average attendees) by implementing automated accountability workflows and personalized follow up sequences.
- Engineered an automated RSVP and check in pipeline utilizing n8n webhooks and QR code generation for seamless, real time attendance tracking and data synchronization.
- Integrated AI driven matching algorithm and post event outreach within n8n to pair attendees based on professional interests and send automated, personalized engagement emails.

PROJECTS

TinyAutomator	Apr 2025 - June 2025
---------------	----------------------

- Architected a modular workflow engine in Golang that utilizes RabbitMQ for asynchronous task distribution and Redis for real time execution state tracking.
- Designed and implemented a React-based UI for three distinct workflow triggers and custom actions.

<https://github.com/tinyautomator/tinyautomator-core>

HyprTask	Oct 2025 - Dec 2025
----------	---------------------

- Engineered a high performance Linux task manager in Golang specifically for the Hyprland compositor, utilizing the Bubble Tea TUI framework to deliver a keyboard centric system monitoring interface.
- Developed a concurrent process management engine that leverages `sync.WaitGroup` and Go routines to perform background metric enrichment, reducing initial UI load delay by bypassing heavy system calls.
- Integrated real time window manager metadata by interfacing with the Hyprland IPC, enabling the mapping of system PIDs to specific graphical workspaces and monitors.

League of Legends-Inspired Portfolio	Sep 2025 - Present
--------------------------------------	--------------------

- Transitioned hosting infrastructure from Vercel to a self-managed server environment, implementing Ackee for privacy-focused analytics to track visitor engagement and site views.
- Expanded platform functionality by engineering a custom blog module and integrating React Three Fiber to render an interactive 3D Summoner's Rift playground.
