Authorized to work under F1-STEM OPT through Aug 2028

WORK EXPERIENCE

Software Engineer II, JP Morgan Chase | Hyderabad India

Aug '20 – June '23

- Led the adoption of gRPC/Protobuf for market data APIs built in .NET, enabling 200+ institutional clients to integrate the trading applications in Python, Java, C++ with a 55% reduction in bandwidth usage for 5,000+ securities
- Redesigned the order validation engine in C# to reduce the routing errors by 99% saving \$10M in trades by introducing strict schema enforcement, optimal serialization utilizing Kafka messaging to handle massive order events to the API service.
- Optimized critical trading operations reducing latency by 40% through strategic use of Memory, Span, ArrayPool, compiled LINQ expressions, and database query optimization with Entity Framework query splitting
- Developed data ingestion and processing pipeline for CAT reporting, processing 10M+ daily events, utilizing batching and background services (IHostedService) in .NET Core, achieved 98% on-time submission rate
- Mentored 3 junior engineers, providing continuous guidance and support to shape their professional development, defining and planning work, and managing their integration and performance over time

Software Engineer, Eze Software | Hyderabad India

June 2018 – July 2020

- Developed end-end web application to streamline the client onboarding using ASP.NET Core, blazer and Entity Framework implementing SOLD principles to manage user-accounts configurations and identity management.
- Created route validation service in C# with .NET Framework 4.7, utilizing LINQ for complex business logic, custom attributes for validation rules, and reflection for dynamic rule execution, reducing support tickets by 65%
- Built diagnostic tooling and automated PowerShell scripts integrated with .NET APIs for production support, implementing retry policies with Polly, exponential backoff, and circuit breakers for resilient error handling
- Implemented comprehensive unit and integration tests using xUnit, Moq, and FluentAssertions, achieving 85%+ code coverage, reducing cycle time by 50%.

Software Engineer, Faishion | Remote, US

Aug 2025 – Present

- Architected subscription management system integrating Stripe API using modern C# patterns including record types, nullable reference types, and pattern matching for payment webhook processing and subscription lifecycle management.
- Implemented Server-Sent Events (SSE) infrastructure using ASP.NET Core for real-time LLM streaming, utilizing IAsyncEnumerable, channels, and Background Service for efficient async stream processing, reducing latency by 70%

EDUCATION

• MS. Computer Science from Illinois Institute of Technology Chicago

Aug '23 – May '25

• B.E. Electronics and Communication from National Institute of Technology (NIT) Trichy

Aug '14 - May '18

PROJECTS

Smart Real-Time Multimodal Assistance System Python, PyTorch, YOLOv8, CLIP, OpenCV, Text-to-Speech

- Developed accessibility application combining computer vision and natural language processing to assist visually impaired users, implementing real-time object detection, spatial reasoning, and audio feedback generation
- Integrated CLIP for multimodal understanding and YOLOv8 for object localization, optimizing inference pipeline to achieve sub-second latency through model quantization, batch processing, and GPU acceleration

Train2Fit – AI-Powered Workout Form Analyzer | YOLOv8, MediaPipe, Flask, OpenCV, Video Processing

- Built a real-time computer vision pipeline using pose estimation to analyze exercise biomechanics from live video, with low-latency feedback powered by a RESTful and WebSocket-based backend.

SKILLS

- .NET Technologies: C# 10+, .NET Core 6/7/8, ASP.NET Core, .NET Framework 4.x, Entity Framework Core, LINQ, ADO.NET
- Web Development: ASP.NET Core MVC, Web API, RESTful Services, gRPC, SignalR, Razor Pages, Blazor
- Messaging & Events: Apache Kafka, RabbitMQ, Azure Service Bus, MassTransit, Event-Driven Architecture, CQRS
- Database: SQL Server, Entity Framework Core, Dapper, PostgreSQL, Redis, MongoDB, T-SQL, Stored Procedures
- Cloud & evOps: Azure (App Service, Functions, Service Bus, SQL), AWS, Docker, Kubernetes, Azure DevOps
