
Christian Martinez

Data Engineer

Results driven Data Engineer with hands on experience developing automating backend workflows, designing data architecture and integrating APIs across cloud environments. Adept at full stack development using Angular, React Native, [Node.js](#), Java, and Python. Recognized for designing high impact automation tools that enhanced communication efficiency and collections revenue growth.

TECHNICAL SKILLS

Programming	Java, Python, Kotlin, Node.js , C#
Frameworks	Django, React, React Native, Angular
Database	MySQL, BigQuery, SQLite, PostgreSQL, Supabase
Web/App Development-	HTML5,CSS3, JavaScript, TypeScript
Cloud Services	Google Cloud Platform (GCP), Microsoft Azure, AWS
Collaboration Tools	Git, Azure DevOps

EXPERIENCE

BMG Loans At Work, Miami, FL - *Data Engineer*

12/2023 - PRESENT

- Originally hired as an Underwriter and was **promoted after 2 months** to Data Analyst then **4 months** later to Data Engineer
- January 2025 Data Department Employee of the Month**, recognition for implementation using **Python** and data from **MySQL** for successful results of **Best Time to Call** in all Push Notifications, Dialer Calls, Voicemails, and SMS for all customers.
- Led the development and implementation of “Best Time to Call” logic across all communication workflows, developed a high-volume Five9 dialer enabling up to 10 outbound calls per agent online in Five9 CRM; introduced Later-Stage DPD commission incentives, driving **dollars collected of scheduled** from 35% to 42% (**7% increase**) (2024–2025); this lead to an incremental **\$8M in recovered delinquent revenue**.
- Developed the Best Time to Call idea, calculation, and table using data from the hour customers call us, upload documents, and the hour they use the app most often (specific to each customer), integrating it into our communication schema in **MySQL** database. The usage in dialer automated calls for our Collection department resulted in a **17% increase** in customers answering the phone and a **12% increase** in customers making a payment.
- Developed **Angular** front-end applications using **TypeScript** for the Client Services department, following a structured Dev/UAT/Prod deployment lifecycle and aligning application code with corresponding database environments.

- Lead development for a service using **Python** and data from our **BigQuery** env that schedules customers to call in our VCC vendor Five9's **API**, generating automatic outbound calling campaigns to customers using their Best Time to Call. The list of customers to call is automatically updated every night. This process has led to the **highest amount of collection outbound calls in BMG history, for over 700k outbound calls in a month**. This service was a direct cause leading to a **BMG collection department record of over \$5.5 million dollars collected in May 2025**.
- Experience executing scripts in **mySQL** to improve and make adjustments to Webportal. Webportal that is used internally by our Underwriting Department to approve/decline/review loans and Collections Department to collect/contact delinquent accounts. Examples could be adding new subreasons in our notes tab, activating (and deactivating) employees access to features in the web portal, enhancing communication scheduling, editing document request communication reasons, inserting new data, etc.
- Utilized **Azure DevOps** to collaborate with team members, track assigned tasks from Project Managers and Team leads, and ensure alignment with development goals, including feature implementation, backend process deployment and testing.
- Utilized **Google Looker Studio** and **BigQuery** to create dynamic **dashboards** that offer analytics on numerous Department (Customer Service, Underwriting, Collections) **Call KPIs** such as Inbound Call Abandon Rate, Queue Wait Time, Calls Handled by IVR. As well as dashboards for individual Agent Performance.
- Wrote queries in **MySQL** to compile monthly reports such as Bankruptcy, Loans Sold, Loan Calendar issues etc for our Client Services Department.
- Produced collection analysis reports using **Google Looker Studio** and **BigQuery**, enhancing strategies on account recovery with Collection Agent focus by evaluating performance based on accounts days past due, roll rate, collection score, and call attempts made.
- Write queries in **mySQL** to pull reports for our Compliance team to make sure our Underwriting department is following proper **Credit Policy** and Underwriting guidelines.

Upwork, Miami, FL - *React Native Mobile App Developer*

02/2025 - 06/2025

- Provided development services for a **React Native** mobile app (Klick Content) for influencers and business owners, tested in Expo Go, with daily updates pushed to GitHub.
 - Enables businesses to create competitions where influencers compete for prize money by linking their Snapchat, Instagram, and TikTok accounts to submit content and earn views. I implemented the authentication and built the RESTful APIs for secure social media integration, content submission, and leaderboard tracking.
 - Built with **React Native** (frontend), **Node.js** (backend **API** calls), **Vercel** (**PostgreSQL** storage & authentication), and **Vercel** (cloud server hosting).
 - Implemented varied navigation structures (segmented page views, stack, tab navigators) and an authentication funnel for user profiles.
 - Features state management for separate business owner and influencer experiences.
 - Monetized through monthly subscriptions for business owners and a commission on influencer payouts, I developed the stripe integration for payments and payouts.
- Provided development services for a **React Native** mobile app (Market OA) for Amazon business owners.
 - Developed a feature leveraging the **Amazon Selling Partner API (SP-API)** to index and display live Amazon product data, including ASIN, title, price, and category details.
 - Implemented **stack navigation** allowing users to click on a product and access detailed views with dynamic pricing insights.
 - Integrated **Google Custom Search API** to retrieve and display cheaper marketplace alternatives, enabling business owners to find profitable sourcing options.
 - Designed and built both the **frontend UI** in React Native and the **backend services** (Node.js/Express) for API routing, data handling, and secure authentication.
 - Optimized data flow between APIs for real-time updates and seamless cross-platform performance.

Whop.com, Miami, FL - *Sports Betting Community Founder*

06/2025 - CURRENT

- Built and currently operate a growing sports betting community with over **1,300 Twitter followers** gained organically through strategic engagement, supported by an outsourced social media marketing team.
- Developed a **JavaScript** based model that calculates implied odds on player and team props, leveraging sports data from Props.Cash to drive a profitable sports trading platform.
- Generated over **\$115,000+ in revenue and \$33,700+ in profit** through disciplined application of custom betting models and market analysis.
- Launched a **subscription service with 75+ active subscribers, earning \$4,300 in revenue to date, with a 50% commission referral program that has brought in 12 new subscribers.**
- Responsible for analytics, growth strategy, user engagement, payment processing, and model development.

EDUCATION

Florida International University, Miami, FL - *Bachelor of Arts in Studies of Business, Law & Society*

06/2021 - 04/2024

- Completed the 1st 3 semesters of my Bachelor's at University of Missouri-Kansas City (08/2019-12/2020)
- Graduation Date: April 2024
- **Course Work:**

-**Java Programming:** Gained a solid foundation in implementing data structures, **object-oriented programming**, and developing in the **Spring Boot** framework.

-**Designing Web Pages (HTML/CSS):** Learned about **web development fundamentals**, front-end design, developed a Lamborghini website as our semester final.

-**Computer Data Analytics (Excel):** Applied **data analytics** to interpret large data sets.

Harvard University, Online - *Harvard CS50 Courses*

01/2023 - CURRENT

- **CS50 Web Programming with Python and JavaScript:** Focused on **fullstack web development**, APIs, **Django framework** and cloud deployment. Used **Git** to learn how to collaborate in a work environment and post to new branches to test new features.
- **CS50's Mobile App Development with React Native:** Emphasized building cross-platform mobile apps, utilizing **Javascript, Node.js, React, React Native**, state management, and deployment strategies. Gained hands-on experience with debugging, performance optimization, and integrating tools like **Redux** and **Expo** components.
- **CS50 Intro to Computer Science:** Covered key intro topics in **data structures, algorithms, and system architecture.**

Udemy.com, Online - *Udemy Coursework*

01/2023 - CURRENT

- **100 Days of Code: The Complete Python Pro Bootcamp:** Focused on advanced Python techniques including **API development, data automation, and cloud services integration.**
- **The Complete Android 15 Course -Master Java & Kotlin:** Gained proficiency in Android app development using **Java** and **Kotlin**. Developed a variety of Mobile apps including **MVVM-based apps, using ROOM library, Firebase-integrated apps.** Learned to design responsive user interfaces with Constraint Layout and build back-end structures.
- **Automate the Boring Stuff with Python Programming:** Mastered automation techniques using **Python** and have applied them in my FinTech experience at BMG Loans At Work.
