

EDUCATION

New Jersey Institute of Technology University, Newark, NJ	Jan 2026 - May 2028
M.S. Artificial Intelligence	GPA: 4.0
Berea College, Berea, KY	Aug 2021 – Dec 2024
B.A. Computer & Information Science	GPA: 3.9
Relevant Classes: Data Structure & Algorithm, Operating Systems, Open-Source Engineering, Software Design & Implementation, Computer Complexity & Modeling, Machine Learning, Artificial Intelligence, Natural Language Processing, Cloud Computing, Distributed Computing, Deep Learning, Advanced Operating Systems, Distributed Computing, Computer Networks, Calculus-I/II/III	

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript, C/C++, Java, Flutter, Swift, R, SQL/NoSQL, Bash, HTML/CSS
Frameworks & Tools: React, Spring Boot, Django, Flask, Angular, Tensor Flow, PyTorch, Docker, Kubernetes, Node.js, Express.js, Microsoft Azure
System & Infrastructure: AWS, PostgreSQL, Linux, CI/CD, MongoDB

EXPERIENCE

The Boeing Company	May 2024 – Aug 2024
Software Engineer	Ridley Park, PA / Seattle WA
- Developed REST APIs with Java and Spring Boot, handling 500+ daily request with sub-50ms response time, integrated AWS SDK to support new business flows. - Created response React UIs that improved user efficiency by 25%. Streamlined multi-step user workflows into single-page experiences, reducing task time by 40% and boosting internal adoption rates. - Designed and integrated asynchronous workflows usings AWS step Function and Lamda, enabling event-driven processing with built-in entry logic, reducing manual intervention by ~15% and enhancing system reliability.	
Cloud Engineer Intern	May 2023 – Aug 2023
- Developed and deployed web applications using Python and Flask, increasing user engagement by 25% and decreasing page load times by 30% through refined coding and efficient database queries. - Spearheaded cross-functional collaboration, brainstorming, and implementing innovative features that fortified app functionality and boosted user satisfaction by a remarkable 20% through user-centric design principles and agile methodologies. - Streamlined codebase and optimized algorithms, reducing code complexity by 20% and improving application performance by 15% through code reviews and optimizations.	
Runestone Academy	May 2022 – Aug 2022
Open-Source Software Developer	Virtual, USA
- Implemented a comprehensive standardization of timestamps across diverse sections of the Runestone project, ensuring a seamless and cohesive user experience and demonstrating meticulous attention to detail. - Spearheaded an overhaul of project documentation with a user-centric approach, resulting in a significant 20% enhancement in clarity and accessibility for contributors, facilitating a more transparent and collaborative development process. - Collaborated within the development team to optimize the timestamp implementation process, successfully reducing the time required for this task by 15%, showcasing a commitment to efficiency and continuous process improvement.	
Berea College	May 2022 –Dec 2024
Full-Stack Engineer	Berea, KY
- Developed AI models utilizing TensorFlow and Python libraries, including Vision Transformer, to analyze sequential loops of ultrasound images, achieving a 70% accuracy rate in estimating image quality and providing descriptive information. - Addressed deep learning limitations in medical images computing, implementing an innovative methodology for explainable models, leading to 80% accuracy rate in assessing image quality. - Enhanced the project’s capabilities by extending models to analyze sequential ultrasound time loops, leveraging Vision Transformer for quality estimation, achieving a significant 75% accuracy rate in estimating image quality, and providing valuable descriptive insights.	
Head TA, Computer Science Department	May 2022 – Dec 2024
- Delivered lectures and conducted lab sessions in the Data Structure and Algorithm course, helping students strengthen their understanding and participation in core OOP concepts. - Promoted to Lead TA of the CS Department, where I supervised department-wide initiatives and organized events and activities. - Facilitated lab hours, reviews sessions, and academic support opportunities to help students succeed in courses like operating systems.	

PROJECTS
