SUMMARY

Software Developer with 6+ years of experience in Java, Spring Boot, Kotlin, and Go, building scalable microservices across AWS, Azure, and GCP using Docker, ECS, and Terraform. Proficient in ReactJS, Angular, JavaScript, and TypeScript, with hands-on experience integrating frontends with REST and GraphQL APIs. Skilled in building event-driven systems using Kafka, gRPC, and Cloud Pub/Sub. Integrated GPT APIs, SageMaker, and internal copilots to support AI-driven workflows. Experienced in CI/CD pipelines, monitoring tools, and databases like Aurora, MongoDB, and Redis.

WORK EXPERIENCE

Software Engineer – Meta, USA

Aug 2024 - Present

- Built backend services using Java and designed catalog data models to support the Instagram Subscriptions feature, integrating product data from Shopify and enabling sellers to sync catalogs seamlessly.
- Developed full stack features for seller onboarding, including React-based UIs and GraphQL APIs, allowing advertisers to manage subscriptions, track issues, and improve their integration status with Meta platforms.
- Built an AI-powered chatbot MVP using Meta's LLaMA3 framework and frontend components to help small advertisers set up campaigns and troubleshoot integration problems independently.
- Implemented a backend notification system to alert sellers about SLA violations, returns, and inconsistent order states, while also developing UI components for tracking alerts and resolution metrics.
- Collaborated with business and partner engineering teams to debug integration issues, enhance the reliability of Meta's commerce and ads systems, and improve onboarding workflows across both backend and frontend layers.

Java Full Stack Developer –American Airlines, USA

Jan 2023 - Jul 2024

- Enhanced Kotlin Android modules and integrated with backend Java APIs, improving UI-side error handling and diagnostics, which led to a 28% reduction in mobile support incidents.
- Built and secured RESTful APIs using Spring Boot and Node.js, deployed on AWS ECS Fargate, integrated with RDS, S3, DynamoDB, and Kafka, enabling real-time event ingestion and seamless backend processing. Connected to ReactJS + TypeScript dashboards for flight operations and airport visibility.
- Developed dynamic UIs using ReactJS, Material UI, and served via CloudFront, improving responsiveness and global accessibility for airline partners.
- Delivered full stack features in Agile teams, integrating GPT APIs, SageMaker models, and AWS services like Lambda, API Gateway, SQS, and CloudWatch to automate copilots and support workflows.

Software Developer – Truist Bank, USA

Jun 2021 - Dec 2022

- Designed and deployed Spring Boot microservices on Azure Kubernetes Service (AKS) for scalable financial systems, enabling multi-region deployments and cloud-native resilience.
- Built Apache Airflow pipelines and integrated Liquibase-based schema versioning for Oracle, MongoDB, and Redis, improving ETL performance by 20% and ensuring database consistency.
- Developed internal admin dashboards using Angular and JavaScript to visualize ETL status, schema drift, and data processing metrics, enabling faster debugging and real-time pipeline visibility.
- Secured APIs using OAuth2, API Gateway, and OWASP guidelines; wrote tests with JUnit and Mockito, and contributed to AI/ML and blockchain PoCs for credit scoring in Agile teams.

Java Developer –Kaiser Permanente, USA

Oct 2019 - May 2021

- Built and deployed Spring Boot microservices on Google Cloud (GCP) using Cloud Pub/Sub for pharmacy partner onboarding, asynchronous order syncing, and replacing legacy JMS queues.
- Automated ingestion of prescriptions and diagnostics using Spring Batch, Cloud Scheduler, and HL7/FHIR, integrating Cloud Functions and Vision API for OCR-based data extraction and reporting.
- Streamed data to BigQuery via Datastream, reducing query latency by 35%, integrated APIs with React Native and Angular apps, and migrated services to Cloud Run, improving deployment speed by 50% with automated rollout and monitoring.

TECHNICAL SKILLS

Languages :Java 17+, C, Go, Scala, Kotlin Python

Libraries/Frameworks/Tools : Spring Boot, Hibernate, Spring Data JPA, Kafka, React, Node.js, Docker, Git, Flask, CI/CD Pipelines, Apache Tomcat, Maven, Jenkins, WebSphere, Cypress, Cucumber, Gatling, JUnit, Mockito, Postman

Databases : MySQL, MongoDB, DynamoDB, Oracle, Cassandra, PostgreSQL

Cloud : AWS (EC2, S3, Lambda, ECS, EKS, CloudWatch), Kubernetes, Terraform, Azure, Dynatrace, Splunk, OpenShift

Others : Full-stack development, DevOps, Agile, Scrum, Waterfall SDLC, TDD, Design Patterns, Automation, Code Reviews

EDUCATION

Masters in Computer Science – Herguan University, Sunnyvale

Bachelors in Computer Science Engineering – Sri Venkateswara Engineering College
