Education

Bachelor of Science in Computer Science

Aug 2022 - May 2026

Rochester Institute of Technology - Expected Graduation: May 2026 |

Skills

- Programming Languages: **Python, Go, Java, TypeScript, JavaScript, SQL, C, C++**
- Frameworks & Tools: **AWS, PostgreSQL, Node.js, Docker, Kubernetes, REST APIs, GraphQL, Fastify, Git**
- Software Engineering: **Back-End Web Development, Data Structures and Algorithms, Object-Oriented Programming, Software Development Lifecycle (SDLC), Server-side Scripting**
- Professional: Remote Team Collaboration, Agile Development, Cross-functional Design, Debugging and Troubleshooting, Clean Code Practices

Work Experience

Full Stack Software Engineer (Co-op) — Volo Sports

May 2024 - Present

Stack: Python, TypeScript, React, GCS, PostgreSQL, Docker, Kubernetes, GitLab

- **Designed and developed back-end web solutions**, enabling 15+ national teams to reduce manual task completion by ~60% through **clean and efficient code**
- **Maintained software applications using industry best practices**, supporting platform performance for ~72k concurrent users while ensuring **robust application functionality**
- **Applied Object-Oriented Programming (OOP)** to architect end-to-end features, **preventing \$10,000s in potential losses** by proactively **debugging and troubleshooting** issues
- **Managed database systems** using **PostgreSQL**, optimizing data refresh and anonymization scripts to run 40x faster while maintaining high-quality data integrity
- **Collaborated with cross-functional teams** within an **Agile development** framework to design scalable software solutions and safeguard 3k+ daily financial transactions
- **Owned the software development lifecycle** for a containerized recommendation engine, driving a 300% increase in content relevance through **AWS cloud services**

Software Engineer (Contract) — BenefAI

Jun 2025 - Aug 2025

Stack: Python, PostgreSQL, FastAPI, GeminiAI API

- **Lead technical engineering efforts** in a fast-paced environment, designing an AI interface that increased user-perceived product speed by 98% through **server-side scripting**
- **Implemented data structures and algorithms** to perform complex manipulations, demonstrating a **collaborative mindset** to deliver high-quality AI-powered features

Projects

Distributed Intelligence & Real-Time Exchange Platform

Stack: TypeScript, Go, Python, React, Node.js, GraphQL, Terraform, Docker, AWS, Redis

- **Architected robust and scalable software solutions** in **Go**, implementing distributed worker nodes to handle 10k+ concurrent requests with sub-millisecond latency
- **Applied CS concepts and algorithms** to engineer a high-throughput trade engine, ensuring 99.9% uptime and adhering to **industry best practices** for back-end performance
- **Developed server-side services** using a cache-aside pattern with Redis, optimizing large-scale queries and improving responsiveness by 90%
- **Utilized Object-Oriented Programming (OOP)** and **cloud services (AWS)** to synthesize system-level requirements into secure, individual components
