

# Gagan Jagadish

Charlotte, NC | 919-641-7851 | gaganj2002@gmail.com | www.linkedin.com/in/GaganJagadish

## EDUCATION

**University of North Carolina at Charlotte, Charlotte, NC**

May 2024

Master of Science in Computer Science | Concentration: AI, Robotics, Gaming

## SKILLS

**Languages:** Python | Java | React | JavaScript | TypeScript | CSS | HTML | C/C++

**AI/ML Frameworks:** OpenAI | Google AI API | PyTorch | TensorFlow | Deep Learning | NLP | RAG | Sagemaker

**Web and Frameworks:** REST API | AWS | EC2 | Lambda | RDS | Docker | Linux | PowerShell | Agile

**Databases and Tools:** SQL | NumPy | Pandas | ETL/ELT | Tableau | Git | Scikit Learn | Android Studio | MS Visual Studios

## EXPERIENCE

### Bridge Investment Group

*AI Software Engineer – Full-Time Contract*

May 2025 – Present

- Leveraging Google Gemini API to automate lease audit workflows by extracting, interpreting, and comparing data from lease documents and property management systems.
- Developing an AI-driven solution to flag discrepancies with 90% accuracy, significantly reducing manual review time and improving operational efficiency.
- Engineering and testing recommendation logic to suggest and programmatically make corrections, targeting a 80% reduction in audit cycle time and minimizing human error in data entry.
- Designing an automated solution to improve efficiency and minimize manual effort for tenant related accounting analysis by utilizing structured RestAPI calls and creating a coherent data structure for fast data retrieval and processing.

### BL Healthcare

Jan 2024 – Apr 2025

*Software Developer*

- Designed and developed a user interface, using android studio, for monitoring health data in collaboration with clinics and external vendors. Leveraged Java, RESTful APIs and Django REST Framework to enhance system accessibility and streamline health data tracking. This improved data accessibility by 30%, enabling seamless data retrieval, ensuring better decision-making in healthcare settings.
- Implemented real-time data ingestion and processing workflows, reducing latency by 25% through optimized OS configurations and networking enhancements, reducing bottlenecks. Built interactive dashboards using AngularJS and JavaScript to visualize key system metrics, empowering stakeholders with live analytics.
- Automated hardware testing, staging, and data tracking, reducing manual effort by 40% and accelerating production cycles. Prepared scripts for ETL data logging and analysis, ensuring efficient data flow between embedded systems and backend infrastructure, reducing downtime and enhancing product quality, leading to faster delivery and elevated customer experience.

### UNC Charlotte – Machine Learning Research

Aug 2023 – May 2024

*Graduate ML Research Assistant, Deepfake Detection and Fingerprinting*

- Built Python based deep learning solutions to embed a 100-bit watermark in X-ray image dataset, ensuring image integrity and protection against tampering, achieving 95% accuracy in deep-fake detection.
- Engineered deep-fake fingerprinting algorithms leveraging GPU computing, optimizing real-time detection and reducing latency by over 80%, enhancing security in medical imaging.
- Conducted in-depth data analysis and research on adversarial attacks and watermark traceability, compiling detailed reports that streamlined research efficiency and technical documentation by 40%.

### OneTouch

Aug 2022 – Nov 2022

*Android Developer Intern, Startup*

- Integrated Google Gemini GenAI via API, using Python, to develop a chatbot and course-based recommender system, enhancing student engagement by 25% while leveraging Firebase and REST APIs for real-time data and profile management.
- Enhanced API and database integration with Firebase, optimizing data retrieval and synchronization, which increased mobile application performance, reduced post-release bug reports by 25%, and ensured a seamless user experience.

## PROJECTS

### Software Engineering – AI/ML

*Fridge Sense, Software System Design & Implementation – UNC Charlotte*

- Crafted a web application using Python, React, Azure cloud services, and the ChatGPT API to generate recipe suggestions based on user-input ingredients, resulting in a 20% reduction in recipe search time and smoother meal-planning workflows.
- Implemented YOLOv8 for object detection, improving recognition accuracy by 90%, and utilized the ChatGPT API for natural language processing, enabling more precise ingredient identification and seamless user interactions.
- Leveraged Azure cloud services for data storage and retrieval, ensuring efficient management of user-input ingredients and recipe recommendations, enabling real-time updates and personalized recipe suggestions.
