

Gideon Jardine

518-480-5070 | gideon.jardine@gmail.com | [LinkedIn](#) | [GitHub](#)

Summary

Software engineer skilled in designing scalable back-end solutions with Java, Python and SQL. Led a computer vision research team to develop a CNN-based handwriting recognition system while establishing 90% code coverage standards and a CI/CD pipeline. Experienced in data structures, object-oriented programming and collaborating across teams to deliver robust applications.

Education

Brigham Young University

BS, Computer Science

Apr 2024

Provo, Utah

- **Coursework:** Algorithm Design and Analysis, Deep Learning, Advanced Programming Concepts, Statistics, Computational Linear Algebra, Software Design, Systems Programming, Computer Security, Database Modeling and Concepts, Mathematical Cryptography, Web Programming, Testing, Analysis, and Verification

Skills

- **Programming Languages:** Java, C++, JavaScript, Python
- **Front-End Technologies:** HTML, CSS, React, Vue
- **Back-End & Database:** Back-End Web Development, SQL, MySQL, Database modeling & management, Web APIs, AWS Cloud Services
- **Data Science & Machine Learning:** Pandas, NumPy, PyTorch, Scikit-Learn, SciPy, Matplotlib, Jupyter Notebook
- **DevOps & Tools:** Bash Scripting, Python Scripting
- **Software Engineering & Methodologies:** Software architecture, Software Development Lifecycle, Agile Development, Object-Oriented Programming, Computer Science Concepts, Data Structures
- **Languages:** Fluent in Spanish

Work Experience

BYU

Research Assistant Lead; Computer Vision Team

Sep 2023 - May 2024

Provo, Utah

- Engineered a convolutional neural network using object-oriented programming and core computer science concepts in Python to digitize ~10,000 records for FamilySearch.org
- Implemented software development lifecycle best practices, including standards for 90% code coverage and a CI/CD pipeline to ensure industry-level code quality
- Led a team of 3 using agile development practices to process Iowa Census/Death records

Blue Raven Solar

Project Manager

May 2024 - Present

Provo, Utah

- Generated \$3.17 million in revenue by implementing agile development methodologies to streamline project delivery
- Collaborated with cross-functional teams to manage accounts for the western region of the company

Relevant Projects

March Madness Prediction using an ensemble of KNN, MLP, and Random Forest

BYU

Generative text-to-speech and speech-to-text using Tacotron and Waveglow, respectively

BYU

Created own version of a social media app where the user could login, logout, post statuses, friend and unfriend. Used AWS Lambda and SQL

Experience creating both front and back end with Family Tree App in Android Studio

Created a Flappy Bird mimic in Unity.

Created the board game Othello in Python.

Created a Chess game in Godot.
