Professional Summary

Software Engineer with 2+ years of experience designing and developing scalable backend web applications. Specializes in Python, Java, and SQL for building microservices and RESTful APIs, with hands-on expertise in Apache Kafka, Spark Streaming, and AWS-native services to process high-throughput data pipelines. Delivered production-ready software with Docker, Kubernetes, and CI/CD practices, improving processing latency and system reliability in enterprise environments.

Technical Skills

- Languages & Frameworks:** Python, Java, C++, C#, .NET, SQL, HTML, OOP, CSS, JavaScript, TypeScript, ReactJS, Angular, Node.js, MongoDB
- Data Analytics:** SQL, Tableau, Power BI
- AI & Machine Learning:** TensorFlow, PyTorch, Scikit-learn, Keras, Pandas, NumPy, SciPy, Statsmodels, OpenCV, NLP, CNN, Deep Learning, OpenAI, RAG, LangChain, LLMs Design, Prompt Engineering
- Cloud Platforms:** AWS (EC2, S3, Lambda, Athena), Azure (Data Factory), Cloud Services
- Big Data:** Apache Spark, Spark Streaming, Apache Kafka, Hadoop
- Tools & DevOps:** Git, VS Code, Postman, Streamlit, Jupyter, MySQL, SonarQube, Jenkins, Docker, Kubernetes, Agile Methodology, High-Quality Software Development
- Software Development Practices:** Back-End Web Development, Software Development Lifecycle, Database Management, Computer Science Concepts

Experience

State Street

Software Engineer

Charlotte, NC · May 2025 - Present

- Developed and enhanced backend components using Python and SQL following software development lifecycle best practices in a joint research-industry initiative focused on financial risk analytics.
- Designed and implemented scalable data ingestion and preprocessing pipelines leveraging data structures and algorithms to process and normalize 5M+ transaction records, improving downstream model accuracy and reliability.
- Built REST-based inference services using FastAPI and Docker, enabling low-latency model execution and reducing end-to-end processing time by 30%.
- Integrated analytics services with AWS S3, Lambda, and Athena cloud services to support scalable data storage, querying, and reporting for fraud analysis teams.
- Implemented robust validation checks, structured logging, and centralized exception handling to improve production stability and traceability of data pipelines.

JPMorgan Chase & Co.

Software Engineer

Hyderabad, India · Aug 2022 - May 2024

- Built real-time data pipelines using Apache Kafka and Spark Streaming to process 5M+ events per day for transaction monitoring.
- Optimized SQL Server and Oracle queries applying database management principles, reducing batch and reconciliation runtimes by 45% in high-volume workflows.
- Developed and maintained 25+ REST APIs using back-end web development best practices with proper versioning, authentication, and standardized error handling.
- Automated CI/CD workflows using Jenkins, Docker, and Kubernetes, supporting 50+ monthly deployments with 99.9% uptime.
- Implemented secure coding practices using TLS 1.3 and AES-256 to protect 10M+ daily financial transactions.
- Migrated 8+ legacy services to AWS-based microservices cloud services, improving scalability and deployment consistency.

Software Engineer Intern

Hyderabad, India · Jun 2022 - Aug 2022

- Developed and tested 10+ Spring Boot services supporting internal banking applications and business workflows.
- Implemented and optimized 15+ SQL Server stored procedures for reporting and reconciliation processes.
- Assisted in migrating 5+ legacy services to AWS-based containerized deployments using Docker.
- Supported 20+ defect fixes, regression test cycles, and release validation activities for production readiness.

Projects

SPECTRE: Visual Speech-Aware Perceptual 3D Facial Expression Reconstruction | [GitHub](#)

- Built a real-time (≤ 30 FPS) 3D facial expression reconstruction system using FLAME, AV-HuBERT, and PyTorch3D; processed 100k+ video frames and 500+ hours of LRS3 data; deployed Streamlit on AWS EC2 (T4 GPU).

AQI Dashboard - Air Quality Visualization Web App | [GitHub](#)

- Developed a Streamlit dashboard analyzing U.S. AQI trends (1980–2022) using Plotly with geospatial and temporal analysis on 1M+ records.

Canteen Management System | [GitHub](#)

- Built a MERN-stack food ordering system with authentication, cart, order history, and admin dashboards; achieved <200 ms real-time updates.

Education

University of North Carolina at Charlotte, NC, USA

Master of Science, Computer Science (GPA: 4.0/4.0)

Aug 2024 - Dec 2025

Charlotte, NC, USA
