.NET / Blazor Web Application Developer

Full-stack web developer specializing in **C#, ASP.NET Core, Blazor, REST API development, and SQL Server**. Experienced in building secure, scalable, high-performance applications with strong emphasis on **front-end functionality, API integration, and automation**. Proven ability to translate business requirements into clean, maintainable code while improving performance, reducing manual workload, and driving operational efficiency. Adept at debugging, optimizing UI/UX, and collaborating in Agile environments using Git, Azure DevOps, and modern development practices.

CORE SKILLS

Languages & Frameworks: C#, ASP.NET Core, .NET 6, Blazor (Server & WASM), JavaScript (ES6+), HTML5, CSS3, SASS, Bootstrap, jQuery, WinForms

Back-End & APIs: RESTful API Development, JSON, JWT, Authentication & Authorization, Dependency Injection, SignalR, T-SQL, SQL Server

Tools & Platforms: Git, Azure Services (Blob Storage, Translator), Azure DevOps, Swagger, Postman/Insomnia, SSMS, Telerik Kendo UI, Figma

Additional: Object-Oriented Programming, Performance Optimization, Web Scraping Automation, OCR Integration, CI/CD (novice), AWS (novice)

PROFESSIONAL EXPERIENCE

Web Application Developer

Constellation Corp. — Baltimore, MD Dec 2020 – Jun 2025

- Developed and maintained enterprise-level **Blazor Server** applications supporting 40+ internal users, improving accuracy, performance, and operational efficiency. (see FDGConnect.com)
- Built secure **RESTful APIs** using C#, ASP.NET Core, and JavaScript to support authentication, partner integrations, and internal workflows.
- Translated Figma wireframes into responsive, accessible UI using **Telerik Kendo UI**, HTML5, CSS3, and modern JavaScript.
- Debugged and resolved UI, performance, and API issues across multiple internal systems, improving stability and reducing support tickets.
- Designed and executed custom **SQL queries and stored procedures** to support business logic and data processing.
- Led code reviews to ensure maintainability, readability, and adherence to coding standards.
- Implemented automated **web scraping** pipelines that reduced manual workload by **100,000 bills**

per month, saving the company **over \$50,000 annually**.

- Built an OCR-driven translation workflow supporting **100+ languages**, reducing international billing processing time by **30%**.
- Collaborated with cross-functional teams using Git, Azure DevOps, and Agile methodologies.

Contract Driver (Part-Time)

CDS / NAPA Auto Parts — Pocatello, ID Sep 2024 – Present

- Delivered automotive parts via inter-store transfer, ensuring accuracy of orders and timely fulfillment.
- Maintained reliable route coverage and customer satisfaction.

Desk Clerk & Technology Specialist

Portneuf District Library — Chubbuck, ID Jul 2015 – Sep 2020

- Provided IT support for 50+ public computers, printers, and peripherals, maintaining 99% uptime.
- Managed hardware/software upgrades, cybersecurity improvements, and system maintenance.
- Implemented a cost-effective security system within a \$1,200 budget, reducing vandalism and enabling remote monitoring.
- Expanded gaming programs and collections, increasing community engagement and reversing declining visitation.

EDUCATION

B.B.A., Business Informatics Idaho State University

PROJECTS

FDGConnect (Internal Enterprise Application)

A secure, API-driven internal application used for data processing and workflow management. Contributed to UI development, authentication logic, and integration with partner systems. Included here due to name recognition among industry employers.

CinderValeStation.com

Self-hosted web application deployed on a personal Ubuntu server. Demonstrating hands-on experience with hosting, deployment, DNS configuration, and maintaining a live production environment outside of managed cloud platforms.
