

Dinith Kumar Pabbu

J2EE Developer | Email: dinith9102@gmail.com | Ph #: 203-936-8646

SUMMARY

- **5 years** of experience in the field of **Information Technology** as a **Full Stack Developer** in core areas such as **Analysis, Design, Coding, Testing and Deployment** using **Java software** and **J2EE technologies** in the **Software Development Life Cycle**.
- Highly skilled and experienced in **Agile Development Process** for diverse requirements, with a strong record of working well with a team of highly motivated colleagues.
- Solid knowledge of **Spring**, including **Spring Core, Spring Boot, Spring MVC, Spring DAO (Spring JDBC, Spring ORM, Spring Data JPA), Spring Transaction Management, Spring IOC, and Hibernate**.
- **Implementation** experience with multi-tiered, highly scalable, component-based, and service-driven Enterprise Java applications using **Singleton, Service Locator, Session Façade, and Data Access Objects (DAO)**.
- **jQuery, AJAX, JSON, Bootstrap, Angular 2/4/7/8/9/10/11/12/13/14/15, Express JS, Node.js, and Node.js** are among my skills.
- Expertise **Angular routing concepts, components, filters, MVC architecture, expressions, directives**.
- Proficiency with object-oriented JavaScript code and **Angular Directives and jQuery** functionality for client-side validation.
- Hands on experience with **NgRX framework, RxJs libraries, Ui Bootstrap, UI Router, and Angular Material frameworks**.
- Extensive experience in using **jQuery UI, Bootstrap mobile** to design websites that will be responsive and cross-browser compatible.
- Proficient in **Spring Boot, Pivotal Cloud Foundry, Spring Cloud Netflix** and other **open-source frameworks** for designing and developing **Microservices**.
- Experience with **Amazon Web Services (AWS) services** such as **EC2, VPC, Cloud Watch, Cloud Front, Cloud Formation, IAM, S3, Amazon RDS, Elastic Cache, SNS, and SQS**.
- Solid understanding of the security components of **Spring Security**, including **Basic Authentication, OAuth 2.0, and LDAP**.
- Experience with **SOA implementations** using **Apache AXIS** framework based on **XML/UDDI/WSDL-based Web Services**.
- Extensive experience using **Kafka** as a **distributed publish-subscribe system**.
- Expertise in **application/web servers** such as **IBM WebSphere, WebLogic Application Servers, JBoss, and Tomcat**.
- Strong background in **Core Java concepts**, such as **Exception Handling, Multithreading, Synchronization, Serialization, I/O, Collections Framework, Java Beans, and Executor Services**.
- Experience with **Visual Studio, Eclipse, IntelliJ, and Spring Tool Suite (STS)**.
- Experience with **JSON and XML technologies** such as **XSL, XSLT, XPath, DOM parsers, and JAXB**.
- Development experience with complex **PL/SQL queries, Procedures, Triggers, Stored Procedures, Packages, and Views** in various databases, including **Oracle, MySQL, and SQL Server**.
- Hands-on experience writing applications using **Maven, Ant, Gradle, and Jenkins** for **continuous integration**, and deploying them to servers.
- Knowledge of the **bug tracking and issue tracking** software **Jira**.
- A highly motivated **team player** with excellent **communication, analytical, documentation, and organizational skills**.

TECHNICAL SKILLS

Programming Languages	Core Java 7/8/11/17, J2EE, SQL, PL/SQL
Frameworks	Spring, Spring Core, Spring Boot, Spring MVC, Spring DAO (Spring JDBC, Spring ORM, Spring Data JPA), Spring Transaction Management, Spring IOC, Hibernate
WEB SERVICES	SOAP, RESTFUL, JAX-RPC, JAX-WS, JAX-B
Web Technologies	HTML 5, CSS 3, JavaScript ES5/ES6, Typescript, Bootstrap, SASS, LESS, AJAX and XML
Frameworks/Libraries	Angular 2/4/5/6/7/8/9/10/11/12/13/14/15, Angular JS, jQuery, Node JS, Awesome Fonts.
IDEs	Visual Studio, Eclipse IDE, IntelliJ, Spring Tool Suite (STS)
Messaging Servers	Apache Kafka, RabbitMQ, ActiveMQ
Deployment and Build Tools	Jenkins, Maven
Version Control Tools	Git, SVN, CVS
Methodologies	Agile, Scrum, SDLC Waterfall model
Operating System	Windows, Linux

EXPERIENCE

Full Stack Developer

- Upgraded from **Java 11 to Java 17**. Implemented Utility methods, local variable syntax for lambda parameters, nested access control, and reading and writing strings are among the features that were used in this project.
- Developed a system design based on user stories and supporting requirements.
- Upgraded legacy application using **Angular 15, NPM, Node JS, Angular Material, and Typescript**.
- Used **Spring Boot Security Starter** for authentication of Restful web services.
- Improved **Java 17** code with new features, ensuring efficiency and scalability.
- Created Java applications that support **JSON** data interchange, parsing, and generation.
- Developed web applications using **Agile** and **Scrum** methodologies using **Typescript** and **Angular 15**.
- Incorporated front-end APIs with back-end APIs and post/get data from back-end with **HTTP Client**.
- Handled component lifecycle hooks - structural directives - ng module configuration - services - cross-component notification service - routing and nested routes - guards - form processing and validation
- Architected and implemented event-driven microservices using **Spring Boot** and the **Axon Framework**, applying **CQRS (Command Query Responsibility Segregation)** to separate read and write models for a high-traffic financial platform.
- Utilized **Spring Cloud Config** for centralized management of configuration properties across all microservices, enabling dynamic updates without redeployment.
- Implemented **Netflix OSS components** including **Eureka** for service discovery and **Zuul** as an API gateway to manage routing and filtering for microservices.
- Secured all microservices and REST APIs using **Spring Security** with **OAuth 2.0** for token-based authentication and authorization.
- Applied principles of **Zero Trust Architecture (ZTA)** by enforcing strict **Identity and Access Management (IAM)** policies and network micro-segmentation within the AWS ecosystem.
- Implemented comprehensive application monitoring and real-time alerting using **Splunk** to proactively identify and troubleshoot performance bottlenecks and errors.
- Integrated **Elastic Search** to develop powerful search functionalities, enabling fast and efficient data retrieval from large, complex datasets.
- Developed dynamic and reusable user interface components using **React.js** to modernize legacy views, integrating with Spring Boot **REST APIs**.
- Managed complex application state in Angular applications using **NgRx**, ensuring a predictable and maintainable data flow.
- Leveraged **Amazon CloudWatch** for monitoring application metrics, logging, and setting up alarms for operational health.
- Utilized **AWS S3** for secure and durable storage of application data, logs, and static assets.
- Integrated **Docker** and **Kubernetes** directly into the **Jenkins CI/CD pipeline** to fully automate the build, test, and deployment process of containerized applications.
- Developed and deployed REST APIs and microservices in Java **J2EE** using **Spring Boot**.
- Utilized **Java 17** features such as lambda expressions and functional interfaces to develop code that is concise and expressive.
- Customized **Kafka** producers and consumers to meet project requirements, ensuring seamless application communication.
- Connected AWS client APIs with Console configuration for **AWS EC2**.
- Configured the Router module with child routes and route guards to perform routing and navigation of the application.
- Resolved browser compatibility issues by making the application run in different browsers, including **IE11**.
- Developed knowledge of MongoDB database concepts like locking, transactions, indexes, Sharding, replication, and schema design.
- Handled component lifecycle hooks - structural directives - ng module configuration - services - cross-component notification service - routing and nested routes - guards - form processing and validation.
- Connected to external systems and APIs that communicate using **JSON** in order to integrate with them.
- Implemented the **Java Platform Enterprise Edition** by implementing applications using the Apache Tomcat application server, an application server that supports the Java Platform.
- Used **JIRA** for managing projects, tracking issues, monitoring errors, and resolving errors in order to improve our processes.
- Improved scalability and integration of applications across platforms with Jenkins.
- Used **GIT** for **version control**, **Maven** for **build scripts**, and Log4j log files for log4j logging.
- Utilized **JavaScript ES5** for the development of cutting edge user interfaces and components.

Environment: Java 17, Spring, Spring boot, Spring MVC, Angular 15, TypeScript, Node JS, Angular CLI, Angular Material, NPM, Node JS, HTML5, CSS3, Rest, Kafka, Maven, Spring-Data, AWS, Jenkins, MongoDB, Log4j, Eclipse, Spring Security, Tomcat, Agile Methodology, SQL, GIT, Jira, Windows.

Full Stack Developer

- Achieved business requirements and functional specifications by developing/programming new features and functionality.
- Provided requirement analysis, design, and maintenance in **Agile** or **Daily Scrum environments**.

- Implemented nested control access methods in **Java 11**, utility methods and local variables.
 - Utilized Spring Framework features such as **Spring Boot**, **Spring Transaction**, **Spring Data**, and **Spring AOP** with **Spring MVC** to develop an application.
 - Created a Single Page Application using **Angular 11/12** that allows users to login, logout, recover their accounts, and generate new passwords if they forget theirs.
 - Created new applications, components, or modules based on functional requirements.
 - Utilized **HTTP** methods such as **GET**, **POST**, **PUT**, and **Delete** to develop and consume user and account **Microservices**.
 - Implemented Lambda functions in **AWS services** for developing platform APIs and deploying and maintaining applications.
 - Extracted relevant information from API responses, processing and transforming them.
 - Installed libraries like **angular-cli**, **typescript**, etc., with the **Node Package Manager (NPM)**.
 - Developed and implemented performance enhancements for **Angular** applications over the course of three years.
 - Provided Restful web services using **JAX-RS** annotations, Jersey as a provider, and **OAuth2** as a security mechanism.
 - Implemented seamless data exchange by integrating Java objects with **JSON** representations.
 - Utilized **Java 11** methods for reading and writing files.
 - Accessed two APIs using **RESTful Web Services** to transfer **JSON data**.
 - Developed and implemented **MongoDB** data models to store and retrieve data efficiently.
 - Contributed to the building and deployment of applications with **Maven scripts**, as well as working with the development team on issues related to CI, Maven, and reporting.
 - Designed and developed robust **RESTful Microservices** using **Spring Boot**, **Spring Data JPA**, and **Spring MVC** to support new business features and functionality.
 - Implemented **Spring AOP** for cross-cutting concerns such as application logging, performance monitoring, and transaction management.
 - Wrote complex **PL/SQL** queries, **stored procedures**, and **database functions** to optimize data access and business logic on the database layer.
 - Built a **Single Page Application (SPA)** using **Angular 11/12**, implementing features like lazy loading to optimize application performance and initial load times.
 - Utilized **RxJS Observables** and operators to handle asynchronous HTTP requests and responses from backend REST APIs.
 - Created responsive and modern user interfaces using **Angular Material** and **Bootstrap**, ensuring a consistent experience across different devices.
 - Developed and deployed **AWS Lambda functions** written in Java to create serverless APIs and execute event-driven business logic, reducing infrastructure management overhead.
 - Gained hands-on experience with **AWS S3** for storing and retrieving user-generated content and application assets.
 - Authored and executed unit tests for services and components using **JUnit** and **Mockito**, ensuring code reliability and facilitating Test-Driven Development (TDD) practices.
 - Participated in regular **code reviews** to ensure adherence to Java and Angular coding standards, improving overall code quality and team knowledge sharing.
 - Gained initial experience with message-driven architecture by implementing **Apache Kafka** for asynchronous communication between key services, improving system decoupling.
 - Ensured that version control and collaboration on GitHub were maintained effectively by coordinating the development of code repositories on the platform.
 - Tracked development, requested answers, fixed bugs, and handled questions from the business using **JIRA**.
 - Verified that coding standards for Java were followed.
 - Managed users, file permissions, and backups as part of routine system administration tasks.
- Environment:** Java 11, Spring Boot, Microservices, Spring Transaction Management, Spring Data, Spring AOP, Spring Security, AWS, OAuth 2, HTML5, CSS3, Angular 11/12, Typescript, Angular CLI, Bootstrap, Node JS, AJAX, JSON, Apache Tomcat Server, Jenkins, Unix, HTTP, JAX-RS, Jira, GITHUB, MongoDB, Visual Studio, Maven, Agile, Windows.

Cyient Ltd | Hyderabad, India

Jan 2020 – Aug 2022

Full Stack Developer

- Involved in all phases of the development of '**Agile Development Methodology/SCRUM**', including development, testing, and refinement.
- Developed Spring-based applications quickly and with very few configurations using **Spring Boot framework**.
- Engaged in the process of applying various validation variables to client-side data to ensure that it complies with specific criteria by applying **TypeScript**, **Bootstrap**, and **HTML5**.
- Improved the user experience and developed Angular 8/9 and **HTTP Observable** functions to acquire data from REST Web Services.
- Utilized **Angular's** component-based architecture to consume **REST APIs**.
- Implemented **HTTP** requests using **Observables** and looped over results using its functions.
- Utilised **Java 8+'s** compact profiles to develop applications that target different deployment environments with a reduced

memory footprint.

- Utilized **Java 8** Stream API to perform efficient operations on streams and collections.
- Implemented the new Date and Time API introduced in **Java 8 (java.time package)** to improve date and time handling.
- Implemented **Spring Data JPA** to configure the persistence layers.
- Developed a deep understanding of **Java 8+** interfaces, including default and static methods.
- Implemented all **CRUD** functionality through REST-based Microservices achieved using **Spring Boot**.
- Achieved on-time completion of **Jira** tickets and regularly updated statuses.
- Added the Optional class to **Java 8** in order to handle potentially null values and avoid NullPointerExceptions.
- Used the **NgRx** library to manage the state of the application through the use of the NgRx library.
- Developed custom Angular modules, components, and services that are self-contained, reusable, and testable using **Angular CLI**.
- Deployed Jenkins to AWS using **Continuous Delivery/Continuous Integration (CD/CI)**.
- Created the **Spring AOP Programming** to setup logging.
- Integrated AWS client APIs with AWS Console configuration for **AWS EC2**.
- Managed the servers and ran the code using AWS Lambda.
- Used **Maven** to develop and deploy the application on a **Tomcat server**.
- Assured an error-free application throughout the whole development process with **Jenkins CI/CD**.
- Contributed to the **GIT repository** by maintaining the source code.

Environment: Java 8, Spring, Spring Boot, Microservices, Spring JPA, REST, JAX RS, AWS, Jenkins, Oracle, WebLogic, Apache Tomcat, Angular 8/9, TypeScript, Angular CLI, NPM, Node JS, HTML5, CSS3, Rest API, Bootstrap, GIT, LOG4J, Agile, Windows.
