

Nirmit Shah

Boston, MA | (857) 398-8283 | shah.nirm@northeastern.edu | [linkedin.com/in/shah-nirmit](https://www.linkedin.com/in/shah-nirmit) | nirmit23.github.io

Education

Northeastern University - Master of Science in Computer Software Engineering
University of Mumbai - Bachelor of Engineering in Information Technology

Boston, Massachusetts
Mumbai, India

Experience

Northeastern University

Boston, Massachusetts

User Experience Design and Testing Engineer

January 2025 - April 2025

- Mentored **50+** students on advanced **UI/UX design principles** including **user-centered design**, **interaction design**, and **responsive layouts**, translating **Figma wireframes** and **design systems** into accessible interfaces using **HTML5**, **CSS3**, and **React**
- Guided hands-on development and workshops emphasizing **component-driven architecture**, **UX fundamentals**, usability, accessibility (**WCAG**), and design consistency, enabling production-ready interfaces with improved flow, performance, and reusable components

Enlabel Global Services, Inc.

Boston, Massachusetts

Software Engineer

June 2024 - January 2025

- Architected a high-performance marketing platform using **Next.js**, **Tailwind CSS** and **GraphQL API**, reducing content publishing latency by **40%** and supporting **5K+** monthly visitors
- Developed a full-stack **SaaS** content management workflow in **React (ES6)**, automating uploads and approvals, persisting metadata in **SQL Server**, and publishing a shared component library to **npm** that standardized UI across **3** applications and reduced code redundancy by **20%**
- Designed and enforced robust **REST API** validation standards across **Java**-based microservices, improving system reliability and resolving **18** integration issues during **CI/CD** workflows
- Engineered an automated **UI** testing framework using **C#**, **.NET**, **Selenium**, and **NUnit**, collaborating with **QA** to resolve **40** critical **Jenkins** failures and reducing recurring **CI** test failures by **25%**
- Implemented a **SSO** authentication system using **OAuth 2.0 + JWT**, integrating marketing site with **SaaS** portal through **C#/.NET** microservices

Finalyca Technologies Pvt. Ltd

Mumbai, India

Software Engineer

June 2022 - June 2023

- Architected a pre-login **Next.js SSR** portal using **TypeScript** and responsive **CSS**, implemented a **Node.js**-based CSV-to-JSON ingestion pipeline and enhanced **SEO** with optimized metadata, improving page visibility
- Modernized a legacy **ASP.NET MVC** portal by migrating it to a modular, component driven **React** architecture, refactoring **120+** components and optimizing **GitLab CI/CD** pipelines, reducing build times by **12%**
- Designed **Java SOAP APIs** for PMS data processing using a layered controller architecture and **Redis** caching within a **microservices** ecosystem, reducing server-side latency by **8%** and establishing consistent **API** and caching guidelines
- Built **34+** interactive Highcharts dashboards for investment analytics, integrating **lazy-loaded**, range-based data fetching with backend services to accelerate rendering and achieve **99%** cross-browser responsiveness across high-volume financial visualizations

Shaalastic

Mumbai, India

Software Engineer

May 2020 - August 2021

- Engineered a secure, role-based instructional platform using **Laravel MVC** and **PHP**, integrating **REST APIs** and dynamic **MySQL** schema management to enhance scalability and reduce query latency by **25%**, supporting **500+** active learners
- Implemented database indexing and **Git-based** workflows to optimize query performance and streamline **version control**

Technical Skills

Languages: C, C++, Python, Java, JavaScript, TypeScript, SQL
Web development: React, Angular, Next.js, Node.js, HTML, CSS, Sass, Tailwind, SwiftUI, .NET, Spring Boot, npm
Cloud & DevOps: AWS (EC2, RDS, S3, Lambda), GCP, Docker, Terraform, Jenkins, GitHub Actions, Postman, Selenium
Databases: SQL Server, PostgreSQL, MongoDB, Redis, RabbitMQ

Projects

Supply Chain Management System Java, Swing, Hibernate, MVC Architecture - [Link](#)

May 2025 - August 2025

- Built a Java-based supply chain management system using Swing and Hibernate, applying layered architecture and GoF design patterns for modularity and scalability
- Implemented domain services for orders, inventory, suppliers, and payments, adding custom logging and state-tracking utilities to improve reliability and simplify debugging and workflow monitoring

Health Check API AWS, Google Cloud Platform, Node.js, MySQL - [Link](#)

January 2025 - May 2025

- Built a cloud-native REST API using Node.js, Express, and MySQL on AWS EC2, enabling observability with CloudWatch and StatsD to monitor API latency and database performance
- Automated infrastructure and delivery using Terraform, Packer, and GitHub Actions, implementing zero-touch EC2 deployments, CI/CD validation, and security controls including AWS KMS, secrets management, and SSL

Boston Town React, MongoDB, Express.js, Node.js- [Link](#)

September 2023 - December 2023

- Developed a MERN-stack property listing platform for 319K+ Boston properties, building an Ant Design-based frontend to deliver a seamless, optimized user experience
- Integrated Mapbox and Leaflet to create an interactive heat map visualizing 741 apartment rental incidents and enabling effective user-agent connections
