SUMMARY

Software Engineer and AI Developer with 1.5+ years of internship experience building intelligent systems using Machine Learning, Computer Vision, AR/IoT, and cloud tools. Experienced in developing scalable applications, integrating RESTful APIs, and deploying models in real-time environments. Strong foundation in SDLC, object-oriented design, and CI/CD workflows with practical exposure to research and production deployments.

EDUCATION

Bachelor of Technology – Computer Science & Engineering (AI & ML) Visakhapatnam, India
Vignan's Institute of Engineering for Women · CGPA: 7.76/10 · Expected Graduation: Apr 2026
• **Relevant Coursework:** Deep Learning, Compiler Design, Computer Networks, DBMS

EXPERIENCE

Symbiosis Centre for Applied AI (SCAAI) Jun 2024 – Present
AI Research Intern – Sports Analytics & Computer Vision Pune, India

- Developed and deployed AI-driven systems integrating AR and IoT for industrial hazard detection, improving monitoring efficiency by **30%**.
- Built Python microservices and REST APIs for real-time safety alerts using TensorFlow and OpenCV.
- Collaborated in Agile teams; contributed to model validation, documentation, and research dissemination.

JMedia Corp Nov 2023 – Jan 2024
Artificial Intelligence Intern – Conversational AI Remote, USA

- Designed and deployed RESTful chatbot microservices using Flask and NLP, improving response accuracy by **25%**.
- Automated API testing and deployment workflows on AWS with CI/CD, reducing manual testing time by **40%**.
- Implemented monitoring and debugging strategies ensuring high availability for production services.

PROJECTS

Femora – AI-Powered Emergency Safety Web App Aug 2025
HTML5 · CSS3 · JavaScript · WebRTC · Web Speech API · Flask

- Led the design and development of an AI-based emergency web app enabling voice and gesture-triggered alerts with geolocation.
- Integrated automated fake-call simulation and AI assistant for hands-free safety activation workflows.
- Optimized backend synchronization to improve alert dispatch latency by **60%**.

Orama – Visual Assistant for the Visually Impaired Apr 2024
YOLO · Tesseract OCR · Flutter · Google TTS · TensorFlow Lite

- Developed a mobile assistant that provides real-time object detection and text recognition with audio feedback.
- Integrated on-device TensorFlow Lite inference and Google TTS for offline audio navigation.
- Reduced inference latency by **35%** via model pruning and quantization for mobile deployment.

Ok!Asaan – AR/IoT-Based Warehouse Safety System Jun 2024
TensorFlow · Flask · OpenCV · Raspberry Pi · AR SDKs · IoT Sensors

- Designed an AI-driven AR/IoT system for real-time hazard detection, machine calibration, and worker safety monitoring.
- Reduced warehouse incidents by **60%** and inspection time by **50%** using decentralized monitoring and alerts.
- Aligned solution with KAIZEN, ISO, and HSE standards to improve operational safety compliance.

SKILLS

Programming Languages: Python, Java, C, HTML, CSS, JavaScript, SQL
Frameworks & Libraries: TensorFlow, Keras, Flask, React.js, Node.js, Pandas, NumPy
Software Engineering: SDLC, OOP, Data Structures & Algorithms, TDD, CI/CD, Debugging, API Integration
Tools & Platforms: AWS, Firebase, MongoDB, MySQL, Docker, Git, GitHub, Postman, VS Code
Soft Skills: Communication, Problem Solving, Teamwork, Adaptability, Research Thinking
