(Green Card)

Seattle, WA, USA | +1 (425) 435-8191 | ronaksoni1@gmail.com | [LinkedIn](#)

Summary

Software Engineer with 6+ years of experience designing and delivering scalable, secure, full-stack applications across banking, fintech, insurance, and SaaS domains. Strong expertise in Java, Spring Boot, microservices architecture, REST APIs, and event-driven systems, with hands-on experience in React, Angular, Node.js, and Express for modern frontend development. Proven ability to build cloud-native solutions using AWS, containerize applications with Docker and Kubernetes, and automate deployments through CI/CD pipelines (Jenkins). Experienced in Kafka-based asynchronous processing, Oracle and MySQL database optimization, Redis caching, and OAuth2/Spring Security for enterprise-grade security. Adept at working in Agile environments, delivering high-quality, production-ready systems that improve performance, reliability, and business outcomes.

Skills

- Programming Languages:** Java (8/11/17), JavaScript (ES6+), TypeScript, SQL
- Backend Development:** Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Microservices Architecture, RESTful APIs, JAX-RS, OAuth2, Event-Driven Systems, API Design
- Frontend Development:** React.js, Angular, HTML5, CSS3, Responsive UI Development, Component-Based Architecture
- Cloud & DevOps Technologies:** AWS (EC2, S3, RDS), Docker, Kubernetes, Jenkins, CI/CD Pipelines, Cloud-Native Deployment, Infrastructure Automation
- Messaging & Streaming:** Apache Kafka, Asynchronous Messaging, Distributed Event Processing
- Databases & Caching:** Oracle, MySQL, Redis, SQL Optimization, Indexing Strategies, Stored Procedures, Data Modeling
- Testing & Quality Engineering:** JUnit, Mockito, Unit Testing, Integration Testing, Regression Testing, Test Coverage Improvement
- Security & Authentication:** Spring Security, OAuth 2.0, Role-Based Access Control, Secure API Design
- Build & Version Control:** Maven, Gradle, Git, GitHub, Source Code Management
- Software Engineering Practices:** Object-Oriented Design, Design Patterns, Agile/Scrum Methodologies, Debugging, Performance Optimization, Code Refactoring
- Monitoring & Reliability:** Application Logging, Production Issue Resolution, Deployment Stability, Incident Reduction
- Collaboration & Tools:** JIRA, Cross-Functional Collaboration, Sprint Planning, Requirements Analysis

Experience

Software Engineer 08/2024 – Present
SMBC MANU BANK USA

- Engineered secure backend microservices using Java 17 and Spring Boot, to modernize internal banking workflows, improving transaction processing throughput by 32% for retail and corporate banking users.
- Architected REST APIs with Spring MVC and Spring Data JPA, to integrate core banking systems with downstream risk platforms, reducing data reconciliation failures by 40% for compliance teams.
- Implemented OAuth2-based authentication and role-based authorization using Spring Security, to enforce regulatory access controls, supporting SOX and FFIEC audit requirements.
- Containerized backend services with Docker and deployed onto Kubernetes, to enable zero-downtime releases, cutting deployment rollback incidents by 45% for operations teams.
- Optimized Oracle SQL queries and indexing strategies, to accelerate high-volume batch jobs, reducing nightly settlement runtimes by 28% for finance stakeholders.
- Integrated Apache Kafka for asynchronous event processing, to decouple payment and notification services, increasing system resilience during peak banking hours.
- Automated CI/CD pipelines using Jenkins, to standardize build, test, and deployment workflows, shortening release cycles from bi-weekly to weekly deliveries.

Software Engineer 11/2022 – 07/2024
Intuit USA

- Developed scalable backend services using Java, Spring Boot, and REST APIs, to support tax calculation and filing workflows, handling millions of transactions per filing season.
- Designed reusable frontend components with React.js and TypeScript, to enhance customer-facing tax dashboards, increasing user completion rates by 18%.
- Implemented distributed caching using Redis, to reduce repeated database reads, lowering average API latency by 220ms for high-traffic endpoints.
- Refactored monolithic services into modular microservices, to improve fault isolation, decreasing production incident blast radius by 35% for support teams.
- Deployed cloud-native services on AWS (EC2, S3, RDS), to ensure horizontal scalability during peak tax deadlines, maintaining 99.9% availability.

- Established automated unit and integration testing using JUnit and Mockito, to improve regression coverage, preventing 30+ critical defects from reaching production.
- Collaborated with product managers and UX teams in Agile sprints, to translate tax law changes into technical solutions within strict IRS deadlines.

Technology Analyst

06/2021 – 10/2022

Infosys Limited

USA

- Implemented insurance policy and claims microservices using Java and Spring Boot, to modernize legacy systems, improving service response times by 34% for underwriting teams.
- Built RESTful APIs using Spring MVC and JAX-RS, to integrate claims processing with third-party vendor systems, reducing manual handoffs by 40%.
- Decomposed a monolithic application into independently deployable services, to enable parallel development, increasing sprint delivery velocity by 25%.
- Designed relational data models and PL/SQL procedures in Oracle, to support policy lifecycle management, ensuring ACID compliance for financial records.
- Containerized services using Docker and automated builds via Jenkins, to enforce consistent environments across QA and production pipelines.
- Secured APIs with OAuth 2.0 and Spring Security, to protect sensitive customer and policyholder data, aligning with insurance regulatory standards.
- Actively resolved JIRA-tracked defects and participated in on-call rotations, contributing to a 20% reduction in production incidents.

Software Developer

02/2020 – 05/2021

Venture Smarter

USA

- Developed full-stack web applications using Java, Spring Boot, and JavaScript, to support business consulting workflows for early-stage startups.
- Built responsive user interfaces using Angular and HTML/CSS, to improve dashboard usability, increasing customer engagement by 22%.
- Designed REST APIs and backend services, to manage client onboarding and analytics modules, supporting thousands of concurrent users.
- Integrated MySQL databases and optimized query performance, to reduce report generation time by 30% for business analysts.
- Implemented Node.js and Express-based services for auxiliary features, enabling faster prototyping cycles for product teams.
- Used Git and GitHub for version control and collaborated in Agile teams, delivering features across bi-weekly sprint cycles.
- Assisted in production deployments and bug fixes, contributing to stable releases with minimal post-launch issues.

Certification
