

# Nihanth Ragi

Memphis, TN | (657) 201-7113 | [iam.nihanth26@gmail.com](mailto:iam.nihanth26@gmail.com) | [LinkedIn](#)

## Summary

Full Stack Software Engineer with 4+ years of experience designing and maintaining scalable, cloud-native applications. Skilled in Java, Spring Boot, Node.js, Python, and TypeScript with solid expertise in data structures, algorithms, and OOP. Proven success in modernizing monolithic systems into microservices, optimizing CI/CD pipelines with Docker and Kubernetes, and collaborating across teams to deliver robust, high-availability solutions.

## Work Experience

### ACL Digital | *Full Stack Developer*

Jan 2024 - Present

- Architected and implemented scalable full-stack web applications using object-oriented programming principles with Java, C#, Spring Boot, React.js, Node.js, Python, and microservices architecture, improving application scalability and performance by over 35%.
- Built robust backend services with TypeScript, integrated with React.js and AngularJS frontends, optimizing UI components using HTML5, CSS3, and Bootstrap to boost user engagement by 25%.
- Automated CI/CD pipelines using Jenkins, Docker, Kubernetes, AWS CodePipeline, and JSON, reducing release cycles from two weeks to three days.
- Enforced clean, maintainable code through rigorous code reviews and agile software development lifecycle best practices while optimizing SQL and NoSQL databases (MongoDB) for faster queries and improved data reliability.
- Collaborated with cross-functional teams to implement OAuth 2.0 authentication on AWS (EC2, S3, Lambda) and Azure, enhancing security and reducing unauthorized access incidents by 30%.
- Developed automated test frameworks with Selenium and Appium to boost coverage and reduce bugs, while utilizing Git, GitHub, Jira, and Confluence for version control and project management.
- Led Agile ceremonies and peer code reviews to boost delivery efficiency, while providing proactive production support that minimized escalations through effective debugging and root cause analysis.
- Designed and implemented application monitoring, logging, and alerting using cloud-native tools, applying core computer science concepts to improve system observability and reducing mean time to resolution (MTTR) by 30% for production issues.

### Accenture | *Software Engineer*

May 2020 - Jul 2022

- Designed, developed, tested, and deployed scalable applications using Java, Python, JavaScript, Spring Boot, GraphQL, and REST APIs while driving process improvements to accelerate launches and boost productivity.
- Built RESTful APIs with Node.js, TypeScript, C, and C++, integrated with React.js and AngularJS, supporting 50k+ users at 99.9% uptime and boosting client retention by 15% through smoother workflows and improved user experience.
- Designed, optimized, and integrated applications with relational (MySQL, PostgreSQL) and NoSQL (MongoDB) databases, reducing query latency by 35% for optimized data access.
- Championed unit and integration testing with JUnit and Mockito, boosting coverage to 90% and reducing bugs by 20%, while using Postman for effective API testing.
- Spearheaded migration from monolith to microservices with Spring Boot, Docker, and Kubernetes, cutting deployment time by 40% and improving scalability and fault tolerance.
- Led integration of real-time Kafka streams and implemented Spring Security with containerized deployments on OpenShift, AWS, and GCP, boosting system resilience, enabling instant notifications, and accelerating release cadence.
- Collaborated with cross-functional teams to translate business needs into technical solutions, enforced secure development practices, and streamlined sprint planning to improve team velocity by 18%.
- Implemented caching, rate limiting, and asynchronous processing to improve API throughput and stability, enabling the platform to handle traffic spikes without performance degradation.

## Skills

- **Languages:** Java, JavaScript (ES6+), TypeScript, Python, C#, C, C++
- **Frontend Technologies:** React.js, Redux, AngularJS, HTML5, CSS3, Bootstrap, Tailwind CSS
- **Backend Technologies:** Node.js, Express.js, Spring Boot, REST APIs, GraphQL, Microservices
- **Databases:** PostgreSQL, MongoDB, MySQL, SQL
- **Cloud & DevOps:** AWS (EC2, S3, Lambda, CodePipeline), Azure, GCP, Docker, Kubernetes, OpenShift, Jenkins
- **CI/CD, Messaging & Streaming:** Pipeline Automation, Containerized Deployments, Kafka
- **Testing & Security:** JUnit, Mockito, Selenium, Appium, OAuth 2.0, Spring Security, Secure Development Lifecycle
- **Tools & Methodologies:** Git, GitHub, Jira, Confluence, Postman, Agile, Scrum, TDD
- **Others:** JSON, Code Reviews, Sprint Planning, Mentoring, Root Cause Analysis, Production Support
- **Fundamental Concepts:** Computer Science Concepts, Object-Oriented Programming, Software Development Lifecycle

## Education

University of Memphis | *Master of Science, Management Information Systems*

Aug 2022 - May 2024
