SUMMARY

Performance-driven Software Engineer with a proven track record at Flipkart and Subex in architecting high-scale backend systems and real-time data pipelines. Expert in Spring Boot, Dropwizard, Microservices, and Cloud-native technologies, specializing in reducing system latency, optimizing inventory accuracy, and implementing robust rate-limiting strategies. Adept at leading zero-downtime migrations and engineering distributed solutions that handle billions of records.

EMPLOYMENT DETAILS AND JOB ACCOMPLISHMENTS

Flipkart	Software Engineer (Backend)	Oct 2024 – Present
- Developed FSN * warehouse uniqueness and live issues listing with real-time metrics dashboard and automated alerting, reducing live FSN issues by 80% and improving inventory accuracy across distributed warehouse systems - Architected Prexo Riwit system for intra-warehouse reverse/exchange transactions, implementing new reverse API, NLC&MRP lot enrichment, and VRP module, improving reverse logistics efficiency by 70% - Designed separate hyperlocal processing pipeline with dedicated Kafka topics and POD-level isolation, reducing hyperlocal order processing latency by 60% and enabling independent scaling - Implemented Gradex rate limiting and degradation strategy with intelligent throttling and graceful degradation, preventing cascade failures and reducing service outages by 90% during peak traffic - Led HBase Debian 12 upgrade with zero-downtime migration, achieving 100% data integrity and improved system performance on upgraded infrastructure - Migrated facts processing from Hive to SparkSQL, achieving 5x query performance improvement and 80% reduction in processing time, enabling real-time analytics - Engineered in-memory rate limiter without Redis, with per-client-per-API and global-level controls, eliminating cascade failures and maintaining 100% health check availability, improving system reliability by 95% - Provided 24/7 on-call support for production systems, handling service crashes, latency issues, DB rotations, and RMQ operations, maintaining 99.9% uptime and reducing incident resolution time by 70%		

Subex Ltd	Java Developer	Aug 2023 – Aug 2024
- Engineered high-performance ARC Processor processing 2 billion CDR records daily for telecommunications fraud management, using Apache NiFi, Apache Ignite, and PostgreSQL, achieving 95% latency reduction through in-memory caching and optimized rate calculation algorithms - Architected scalable rating system with multi-dimensional rate matching (service/call/record types), time-band-based pricing, and support for 4 rate types (flat, stepped, tiered, telescopic), enabling real-time processing of 2 billion records with sub-millisecond subscriber lookups - Implemented Apache Ignite in-memory caching strategy for subscriber data (rate plans, benefits, discounts), reducing database lookup latency by 95% and enabling real-time balance updates for 2 billion daily transactions. - Developed ARC data-sampling module for validating rating and charging logic, implementing 4 sampling types (rate-based, plan-based, special destination, custom) with configurable filters (file input, regex matching, row selection), reducing validation time by 85% and ensuring accuracy before processing 2 billion daily CDR records		

SKILLS

- Languages & Frameworks: Java, Spring Boot, Dropwizard, Spring MVC.
- Database & Messaging: MySQL, HBase, Kafka, RabbitMQ.
- DevOps & Cloud: AWS, Kubernetes, Docker, Maven, Gradle, Git.
- Observability & Tools: Grafana, JUnit, Postman, Jira, Agile Methodology.

PROJECTS EXPERIENCE

- Distributed Microservices Architecture: Architected scalable systems using Spring Cloud (Eureka, Config Server, API Gateway) and Spring Boot, implementing JWT-based Security and high-performance RESTful services to handle complex business workflows.
- High-Throughput Data Orchestration: Engineered real-time data pipelines using Kafka and Apache NiFi, leveraging Hibernate/JPA for PostgreSQL/MySQL and HBase to ensure consistent data persistence across distributed clusters.
- Cloud-Native DevOps & Observability: Streamlined delivery via CI/CD (Jenkins) and Docker on AWS infrastructure, utilizing Grafana, Dropwizard, and JUnit to maintain high availability and system health.

EDUCATION

Bachelor degree from KLE Society's College of BCA with an impressive 88% score
