Profile

Highly skilled and experienced Java Developer with 4 years of expertise in designing and implementing robust and scalable Java applications. Seeking a challenging position in a dynamic organization to utilize my technical skills and contribute to the success of innovative software solutions.

Personel Information

- Medium : <https://medium.com/@sincisukran>
- Github : <https://github.com/devsukransinci>

Skill

- Programming Languages & Frameworks: Java, Spring Framework, TypeScript, Node.js
- DevOps & Tools: Docker, Kubernetes, Jenkins, Git, GitHub, Postman
- Databases & Messaging Systems: MySQL, PostgreSQL, MongoDB, Apache Kafka, RabbitMQ

Work Experience

- Career Break/Freelance or consulting work 23.01.2023 - Halen
I attended a bootcamp supported by the Turkish Ministry of Technology and received advanced Java Spring Boot training.
I also strengthened my theoretical foundation by completing my undergraduate degree.
I developed custom software solutions for small and medium-sized businesses.
I created web applications and RESTful APIs for areas such as e-commerce, inventory management, and user management.
I performed software analysis based on project requirements, creating architectural designs and database models.
I developed sustainable software adhering to clean code and SOLID principles.
I gained experience in CI/CD processes, version control (Git), test writing, and deployment.
- Glosy bilişim /Logistics Industry 26.12.2021 - 16.01.2023
Full -Stack developer
Technologies: Java, Spring Boot, Spring Security, Hibernate, REST API, MySQL, Git, Docker
Roles and Contributions:
Actively contributed to the development of stock and shipment management systems that digitized logistics processes.
Developed new services and maintained existing ones within a microservice architecture.
Built secure and efficient RESTful APIs to facilitate data exchange between mobile and web clients.
Implemented JWT-based authentication mechanisms to ensure secure user access control.
Performed performance optimization in MySQL by writing complex queries, joins, and indexing strategies.
Wrote unit and integration tests for newly developed features using JUnit and Mockito.
Participated in weekly sprint meetings following the Agile/Scrum methodology throughout the development lifecycle.
Used Git for version control, handling merge operations and pull requests in collaborative workflows.
Managed logging and error tracking with Logback and the ELK stack (Elasticsearch, Logstash, Kibana).
Proposed and implemented solutions for common logistics challenges such as delivery delays, route conflicts, and warehouse inefficiencies.
- Raysoft software 20.12.2020 - 04.02.2021
Intern Software developer
raysoft software is a company that develops software and products entirely on crypto security.
we developed a fanmeter tv live broadcast program
this program is like twitch, but it is a platform where users can pay for broadcasts entirely in cryptocurrencies and

receive payments in crypto tokens from the broadcast.
we developed a system.

XRAY UTXO is the software we have developed and contributed to.

(Unspent transaction output) In cryptocurrencies, an unspent transaction output is authorized by one account to be spent by another

represents a quantity of digital currency. EVM is a software architecture that enables developers to build

- **Fitek teknoloji**

01.05.2021 - 12.10.2021

Java developer

Led the design and development of a large-scale Java-based enterprise application, ensuring high performance and scalability.

Collaborated with cross-functional teams to gather requirements, analyze technical feasibility, and deliver quality software solutions.

Implemented best practices for code quality, including unit testing, code reviews, and continuous integration.

Optimized application performance by identifying and resolving bottlenecks and implementing caching mechanisms.

Designed and implemented RESTful APIs to integrate the application with external systems and services.

Mentored and provided technical guidance to junior developers, fostering a collaborative and knowledge-sharing environment.

Actively participated in agile ceremonies, including daily stand-ups, sprint planning, and retrospectives.

Worked closely with product owners and stakeholders to understand business requirements and translate them into technical solutions.

- **Speak out**

22.01.2021 - 22.06.2021

Instructor /Voluntarily

Speak Out is an association that provides software education to high school girls. I give java training on weekends in this association.

Projects

- **Futures trade bot**

It is an advanced program with artificial intelligence that can take positions according to the direction of movement in Binance Futures transactions.

- **Fanmeter TV**

Fanmeter.tv is a system where crypto values can be used in live broadcast and social media content.

- **Coin Swifter**

Coin Swifter is a Coin Exchange with spot Margin transactions that can be exchanged for Coin Tokens in All Parities.

- **Online Shopping Portal**

A cloud-native, microservices-based e-commerce platform built for scalability, modularity, and real-world applicability. This project handles core e-commerce functionalities such as product management, user services, and order processing, with a focus on event-driven communication, observability, and fault tolerance.

- **Nasa Project**

The project I created serves as an interactive platform where users can choose from three leading Mars Rovers (Curiosity, Opportunity, and Spirit) and receive fascinating images captured by these robotic explorers

- **E learning Management System**

This project aims to simplify the enrollment and learning process for users, providing a seamless experience for administrators, professors, and students.

- **Java Mini Projects – 20+ Applications**

Project link: <https://github.com/devsukransinci/algorithmExercises>

Twenty-plus Java mini projects based on real-life scenarios were developed and shared on GitHub.

The projects included practical applications such as a GPA calculator, bank transfer system, budget planning, restaurant billing, and car insurance premium calculation.

Topics such as OOP principles, control structures, collections, array and list manipulation were effectively implemented in the projects.

- **LeetCode / DSA Practice – JavaScript & Java (Published on GitHub)**

Project Link: <https://github.com/devsukransinci/dsa-practice>

58+ algorithm problems solved and added to GitHub with explanations.

Topics:

Array & Two Pointers: Two Sums, Merge Intervals, Spiral Matrix...

String Algorithms: Longest Palindromic Substring, Regex Matching, Valid Parentheses...

Linked List: Merge Two Lists, Remove Duplicates, Rotate List...

Recursion & Backtracking: Combination Sums, Permutations, Word Search...

Math & Logic: Pow(x, n), Climbing Stairs, Median of Arrays...

Practical exercises on structures such as HashMap / Matrix / Sudoku.

Certificates

- HackerRank Badges

 Java: 5-Star Gold Badge (Top-tier proficiency)

 SQL: 3-Star Silver Badge (Advanced query and database skills)

 Problem Solving: 3-Star Silver Badge (Algorithms and data structures)

Also earned 9 verified certificates in Java, SQL, REST API, and Software Engineering.

Technical Writing

- **I have published 35+ technical articles on**

Medium, focusing on core and advanced backend development topics.

These include foundational Java subjects like variables, control structures, arrays, object-oriented programming principles, and the differences between JDK, JVM, and JRE.

I've also written in-depth guides on software architecture, including SOLID principles, layered architecture, and clean code practices.

My content extensively covers Spring and Spring Boot, such as Dependency Injection, IoC, Spring Security (deep dive), logging strategies, and RESTful web service design.

I have written about microservices, Docker usage in Spring Boot projects, and developing event-driven architectures with Apache Kafka.

Additionally, I have explored CI/CD pipelines, effective usage of Jenkins, and Test-Driven Development (TDD) practices in real-world applications.

To support beginners and fellow developers, I created a comprehensive backend developer roadmap, breaking down each technology step-by-step.

Education

- **Anadolu University / Management Information Systems**
Bachelor's

- **Isparta University/Graphic Design**
Associate Degree

- **Ibrahim Çeçen University Computer Programming**
Associate Degree
