SUMMARY

Results-driven Software Engineer with a Master's degree from USC. Experienced in web and mobile development, with a proven ability to design, develop, and optimize scalable applications. Proficient in languages like **Java**, **Python**, and **JavaScript**, and skilled in using frameworks such as **Spring**, **React**, and **Angular**. Strong analytical and problem-solving abilities demonstrated across cloud architectures, microservices, and security projects. Seeking a full-time position to contribute to development initiatives while advancing as a software engineer.

EDUCATION

University of Southern California , Los Angeles, CA Master of Science (M.S.) in Computer Science	Aug. 2022 – Dec. 2024
Georgia Institute of Technology , Atlanta, GA Master of Science (M.S.) in Materials Science and Engineering	Aug. 2020 – May. 2022
Tianjin University Tianjin, China Bachelor of Science (B.S.) in Materials Science and Technology Bachelor of Science (B.S.) in Computer Science and Technology	Sep. 2015 – Jun. 2020

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, PHP, Kotlin, Golang, Python, SQL, Swift, MatLab, C/C++, HTML/CSS
Databases and Cloud: MySQL, PostgreSQL, AWS Lambda/EC2, MongoDB, Amazon RDS, Machine Learning Set
Web/Mobile Development: Spring, Java Servlet, AngularJS, Vue, Node.js, jQuery, HTML & CSS, React JS, Redux, Android, Linux

WORKING EXPERIENCES

Giant Union Co., Inc. – Enterprise Resource Planning (ERP) System Development Software Engineer]	Commerce, CA Aug 2025 – Present
- Developed role-based authentication and automated CI/CD pipelines with GitHub Actions and Composer, improving deployment speed and security. - Implemented Purchase Order and Cost Computation modules with Accounting Entry logic for accurate stock and financial postings, and added PDF preview + direct printing for warehouse operations. - Designed a Redis + task-scheduler-based low-stock alert service with TTL auto-expiration, enabling real-time inventory notifications. - Refactored reusable UI and form components and migrated legacy databases, improving maintainability and ensuring data consistency. - Led the software development team (including interns and contractors), collaborating closely with operations, accounting, and warehouse stakeholders to clarify abstract business requirements, design end-to-end workflows, and translate them into scalable technical solutions.	
Creatorain – AI-Powered Influencer Marketing Platform Software Engineer	Los Angeles, CA Feb 2025 - Aug 2025
- Engineered a secure, scalable JWT-based authentication system integrating Instagram, TikTok, and Google OAuth using React, Next.js, and MongoDB, enabling seamless user login and multi-platform account linking. - Built an AI-driven email automation pipeline using Flask, AWS SES, and OpenAI's GPT API, which improved creator outreach efficiency and reduced manual communication workload by 70%. Architected robust, modular workflows for creator onboarding, campaign management, and appointment scheduling with session management, enhancing platform usability. - Designed and deployed a Shopify app leveraging webhooks to capture influencer referral data, integrated advanced sales tracking and analytics, and deployed the system on AWS Elastic Beanstalk to ensure scalability and reliability.	
EZDealer Inc. – B2B SaaS Platform for Auto Dealership Digitalization Software Engineer Intern	San Jose, CA May 2023 - Jan 2024
- Participated in the end-to-end development of a web-based automotive e-commerce platform targeting B2B and B2C markets, focusing on responsive design and intuitive user interfaces. - Implemented UI components and interaction flows using CSS and Element UI, improving customer engagement and reducing bounce rate by 30%. - Developed and deployed a post management module and role-based access control (RBAC) system using Vue.js and JavaScript, ensuring secure and efficient content operations. - Built a Spring Boot backend integrating MySQL and MongoDB for hybrid data management, and implemented login-time analytics through Alibaba Cloud services, enabling real-time dealership activity insights.	

PROJECT EXPERIENCES

TwitchPicks: A Personalized Twitch Resources Recommendation Engine
- Designed and built a full-stack Spring web application delivering personalized Twitch resource recommendations. - Implemented RESTful APIs with Java Servlets and integrated the Twitch API for real-time data ingestion. - Processed and stored Twitch data in MySQL, extracting game signals to improve recommendation relevance and user engagement. - Deployed the application on AWS EC2, achieving stable production operation with 99.9% uptime.
