

Bharat M Software Engineer

USA | +1(716)-393-9757 | bharatma.c179@gmail.com

SUMMARY

Software Engineer specializing in developer workflows, UI state management, and IDE-based automation. Experienced with image annotation, screen recording, and precise workflow documentation using both proprietary and open-source tools. Adept at ensuring accuracy, system integrity, and compliance with detailed staging instructions in high-paced environments.

TECHNICAL SKILLS

- **Testing & Quality:** JUnit, TestNG, Mockito, Pytest, Selenium, Postman, Prometheus, Grafana
- **Project Execution:** Attention to Detail, Pattern Recognition, Agile Scrum, TDD/BDD, Kanban, Jira, Confluence
- **Cloud & DevOps:** AWS, Azure, GCP, Docker, Kubernetes, Terraform, Ansible, Jenkins, GitHub Actions, GitLab CI/CD
- **Developer & Annotation Tools:** Visual Studio Code, PyCharm, Android Studio, Screen Recording, Image Annotation, Workflow Documentation
- **Frameworks:** Spring Boot, Hibernate, React, Redux, Angular, Vue.js, Node.js, Express.js, Fast API, Flask
- **Programming Languages:** Java, Python, C++, C#, TypeScript, JavaScript, SQL
- **API & Architecture:** RESTful APIs, Microservices, Event-Driven Architecture, Serverless Architecture, CQRS, MVC, DDD
- **Security:** OAuth 2.0, JWT, OpenID Connect, SSL/TLS, Security Compliance
- **Databases & Data Management:** MongoDB, MySQL, PostgreSQL, Redis, Oracle SQL, Firebase, GraphQL, Elasticsearch, Kafka

PROFESSIONAL EXPERIENCE

JPMorgan Chase & Co.

Aug 2024 - Present

Development and Programming Expert

- Created structured workflow documentation and annotated user interactions for internal platforms, ensuring precise capture of window arrangements, file states, and UI flows in accordance with departmental staging requirements.
- Developed high-fidelity image annotation processes using custom and open-source tools, labeling IDE elements, log outputs, and execution stages for automation and compliance verification.
- Utilized developer tools and programming environments such as Visual Studio Code and PyCharm for capturing multi-step development journeys, improving workflow reproducibility and supporting code traceability.
- Built RESTful APIs for accounts, transactions, and portfolios using Spring Boot, Hibernate, and Spring Cloud, applying CQRS and Event Sourcing to streamline financial workflows and support consistent data states.
- Implemented quality assurance for annotation deliverables by following strict internal guidelines, validated outputs, and collaborated with quality teams to achieve 100% accuracy in released assets.
- Collaborated with engineering and product groups to document process maps and facilitate cross-team knowledge transfer, enhancing the clarity and repeatability of core developer workflows.

LTI Mindtree

Sep 2021 - Jul 2023

Full Stack Software Developer

- Developed secure enterprise payment-processing modules using Spring Boot, Java, and MySQL, optimizing transaction routing, settlement workflows, and validation logic, improving system reliability and handling high-volume payments with 99.95% uptime across all operations.
- Built responsive React dashboards with Redux and TypeScript, integrating role-based views and real-time updates via Web Sockets, enhancing operational monitoring efficiency, reducing manual verification time by 35%, and enabling faster decision-making for risk and compliance teams.
- Designed and implemented REST APIs for payments, accounts, and reconciliation workflows using Spring Boot and JPA, reducing API latency by 28% through query optimization, caching, and efficient serialization, supporting seamless integration with external financial networks.
- Architected modular microservices using Spring Boot, Kafka, Redis, and event-driven communication, improving peak-load handling for concurrent payment requests by 30%, increasing fault tolerance, and ensuring consistent performance under high traffic conditions in production.
- Implemented OAuth 2.0, JWT, and SSO integration with Spring Security, strengthening authentication flows, ensuring PCI DSS compliance, and reducing security-related incidents by 40%, providing secure and stable identity management for internal banking applications.

Hexaware Technologies

Mar 2020 - Aug 2021

Software Engineer

- Developed backend modules for financial data processing using Python, Flask, and SQL Alchemy, improving batch ingestion workflows, customer instruction parsing, and transaction validation, contributing to a more reliable platform supporting large-scale enterprise banking clients.
- Built interactive frontend components using Angular and TypeScript for operational monitoring dashboards, incorporating real-time event updates, modular UI elements, and data visualization features, enhancing usability and reducing manual verification effort for support teams.
- Integrated CI/CD pipelines using Jenkins and GitHub Actions, automated testing with Pytest and unit tests, and enforced code coverage and linting, significantly improving release stability and minimizing regression issues across distributed banking applications.
- Containerized application workloads with Docker and deployed them on Kubernetes environments, implementing logging and monitoring pipelines using ELK Stack and Prometheus, resulting in optimized resource usage, and faster identification of production issues.

EDUCATION

University at Buffalo, State University of New York at Buffalo, Buffalo, NY

Aug 2023 - Feb 2025

Master of Science, Computer and Information Science

- GPA: 3.7/4
