SUMMARY

DevOps Engineer around 3 years of experience automating and optimizing cloud infrastructure, CI/CD pipelines, and monitoring solutions for enterprise environments. Skilled in AWS, Azure, Docker, Kubernetes, and Terraform, with hands-on expertise in scripting, infrastructure as code, and cloud security. Proven ability to drive high-availability deployments, reduce release cycle times, and enhance system reliability through proactive monitoring and automation. Adept at bridging development and operations to deliver scalable, secure, and robust solutions in fast-paced Agile teams.

SKILLS

Programming & Scripting: Python, Bash, PowerShell, Groovy, JavaScript (Node.js), TypeScript, Go, Ruby, SQL, C/C++, YAML, JSON
Cloud & Infrastructure: AWS (EC2, S3, Lambda, IAM, VPC, CloudWatch, CloudFormation, ECS, EKS, RDS, SQS, Route53), Microsoft Azure (App Services, AKS, Blob Storage, Azure Functions), GCP
DevOps & Automation: CI/CD (Jenkins, GitHub Actions, GitLab CI/CD, Travis CI, CircleCI, Azure DevOps), Infrastructure as Code (Terraform, CloudFormation, Pulumi), Configuration Management (Ansible, Puppet, Chef, SaltStack), Containerization & Orchestration (Docker, Kubernetes, Docker Swarm, Helm, Istio, IaC)
Monitoring, Logging & Security: Prometheus, SLO/SLI, Grafana, IAM, ELK Stack, Datadog, Splunk, AWS CloudWatch, Dynatrace, AppDynamics, LogicMonitor, SonarQube, Zero Trust Security, Root Cause Analysis, Post-Mortems
Tools & Platforms: Git, GitHub, GitLab, Nexus, Maven, Gradle, JUnit, JIRA, Confluence, Alation, Power BI, Tableau
Operating Systems & Servers: Linux (Ubuntu, RedHat, CentOS), Windows, macOS, Apache Tomcat, WebSphere, WebLogic, Httpd

PROFESSIONAL EXPERIENCE

- | | |
|---|---|
| DevOps Engineer, JPMorgan Chase | Aug 2024 – Present Remote, USA |
| <ul style="list-style-type: none">Engineered and automated robust CI/CD pipelines using Jenkins and GitHub Actions across AWS and Azure environments, reducing deployment cycles by 40% and ensuring standardized, compliant releases for enterprise-scale financial platforms.Designed and managed Dockerized microservices architecture with Kubernetes (EKS/AKS), enabling zero-downtime rolling updates for high-availability trading and payments applications, critical to maintaining uninterrupted client services.Provisioned cloud infrastructure on AWS using Terraform and Ansible, automating environment setup and configuration, cutting setup time by 60%, and eliminating manual errors through infrastructure-as-code and automated policy enforcement.Integrated enterprise-grade monitoring solutions with Prometheus, Grafana, and AWS CloudWatch, building real-time dashboards and proactive alerting that decreased system outages by 30% and ensured compliance with internal SLAs.Implemented and managed IAM roles, single sign-on (SSO), and zero-trust security controls, strengthening cloud security posture and supporting SOC 2 and financial regulatory compliance for customer-facing applications and internal business platforms.Drove DevSecOps initiatives, collaborating with InfoSec and development teams to embed automated vulnerability scanning and compliance checks into CI/CD workflows, facilitating secure blue/green deployments and continuous audit readiness.Developed Python automation scripts for infrastructure health monitoring, log analytics, and automated remediation, accelerating incident response and reducing mean time to resolution (MTTR) for critical production environments by 20%. | |
| DevOps Engineer, Sails Software | Nov 2021 – Jul 2023 Andhra Pradesh, India |
| <ul style="list-style-type: none">Supported migration of on-premises applications to AWS by designing scalable cloud infrastructure, scripting automated deployments with Ansible and Python, and learning industry best practices for infrastructure as code adoption.Developed and configured monitoring solutions using ELK Stack and AWS CloudWatch, helping the team achieve a 15% increase in system reliability through improved alerting and better visibility into distributed application health.Assisted with CI/CD pipeline development, integrating test automation tools like Selenium and PyTest, expediting software delivery for web applications and improving deployment success rates.Documented standard operating procedures for cloud resource provisioning and troubleshooting, helping new engineers onboard faster and reducing response times for common incidents across the cloud platform.Participated in Agile sprints, collaborating with senior engineers to automate routine DevOps tasks, refine build and deployment processes, and support the containerization of key backend services.Contributed to infrastructure compliance audits by gathering configuration evidence and supporting remediation efforts, helping the organization align with best practices and industry regulations for cloud environments. | |

EDUCATION

- | | |
|---|-------------------------------------|
| Master of Science, Rivier University
Computer Science | Aug 2023 – May 2025 Nashua, USA |
| Bachelors of Technology, KL University
Computer Science & Engineering | Jul 2019 – May 2023 Guntur, India |
