Professional Profile

A **Senior Software Engineer and Architect** with over 25 years in Information Technology who has experience working in complex architectures. Along with exposure to multiple, diverse backend technologies and processing environments; I demonstrated strong leadership skills and the ability to motivate and influence. I possess exceptional interpersonal skills, including teamwork, facilitation and negotiation. My career has focused on Application Integration (EAI), Data Modeling (DM) and Information Architecture (IA), Customer Relationship Management (CRM), Master Data Management (MDM) and Content Management (ECM) for the enterprise. I have decades of experience in client/server and service-oriented architecture (SOA) environments, including solution architecture, API and backend services, message broker protocols, application development, middleware, database management or operations, DevOps and Cloud Knowledge, Mobile development, MVC (model view and controller) solutions.

KEY QUALIFICATIONS

- Strong technical, project management and leadership experience from various levels of project responsibility, typically filling the roles of **Senior Engineer** and/or **Architect**
- Expert in SOA, object-oriented analysis and design, and client/server systems with strong knowledge of network architecture and application development methodologies
- Strong understanding and opinions on how integration has evolved from an on premise, centralized function towards being a digital, cloud and API-driven capability
- Knowledge and experience of hybrid cloud integration approaches, API-led architectures and digital-era integration governance methodology
- Excellent understanding of integration architecture and patterns
- Knowledge and experience of multiple integration and API enablement technologies
- Comprehensive understanding of contemporary software engineering practices with a structured approach to architectural design
- Thorough understanding of all components of an enterprise technical architecture and of business process re-engineering principles and processes
- Extensive leadership experience in Business Analytics and Optimization (BAO), specifically in MDM
- An experienced data and object modeler with broad experience in data migration, requirements analysis and digital security systems.
- Extensive industry exposure includes media and entertainment, communications, insurance, securities, banking and pharmaceuticals
- Ability to understand the big picture and short-term perspectives of situations while also able to quickly comprehend the functions and capabilities of new technologies and translate business needs into solution architecture requirements

PROFESSIONAL EXPERIENCE

African Development Bank - Abidjan, Cote D'Ivoire
Application Integration Specialist

March 2020 –January 2025

- Developed and executed the full lifecycle of implementation for Talend Data Integration and Talend Data Services in the AfDB environment. In addition, I developed Talend CI/CD build and release pipelines leveraging the Azure DevOps platform. I also developed several training and operational media to facilitate use, maintenance and knowledge transfer.
- Developed the implementation roadmap for API Integration based on the Azure API Management (APIM) platform. The execution of this roadmap included a proof-of-concepts (POC) evaluating and validating the capabilities of the self-hosted gateway and managed gateway options for the Azure APIM. I also collaborated with various departments to acquire, implement and trouble shoot Azure VPN integration with the Azure APIM and the Bank's Cisco FTD platform. Developed the API Governance document, the API Development Guides among others to provide the guidance and best practices for the Bank's API Implementation including OWASP 10 recommendations and mitigations
- Managed the implementation and subsequent termination of the Bank's API implementation based on the IBM API Connect platform.
- Provided a broad range of technical and SME support including GitLab CE platform upgrade, POC using PowerApps for TCIS.1 Portfolio Monitoring, POC for Azure Key Vault integration with Azure DevOps pipelines, build and deployment support for a micro-services backed web app based on the Azure platform (AWF project), and several guidance documents including Comparative Analysis of Azure DevOps Repos vs GitLab CE and a Software Development Guidelines document
- Performed analysis of TCIS Application Integration Environment and created AfDB Integration Architecture Document to serve as an omnibus compilation of current integrations and interdependencies.
- Developed Architectural Decision Document to facilitate the selection of a Service API Manager and Docker Orchestration ADD
- Developed strategy documents on Cloud Deployment and Application Integration Strategy
- Design Database DevOps (CI/CD) solution for CHIS and implemented a POC for BI Team Use case
- Led Database DevOps POC for both Java and .NET projects
- Implemented Database DevOps for solution based on Liquibase for the Azure DevOps platform and deployed .NET projects using the implemented solution
- Completed the Harmony Connect POC and collaborated with partners to identify and mitigate areas of concern.
- Developed automated workflow solutions using Microsoft PowerAutomate
- Collaborate with SQA DevOps as SME to provide guidance and input on various topics including Agile methodology and Containerization
- Led Proof-of-Concept efforts for API Manager implementation leveraging NGINX+
- Leading Proof-of-Concept efforts for static code analysis leveraging SonarQube
- Collaborate with Procurement to complete RFPs for Application and Data Integration solutions
- Led the efforts to deploy Talend Data Integration to all environments as well coordinated and facilitated multiple training sessions for the solution platform.

- Developed the Talend CI/CD build, deploy and release pipeline with Azure DevOps
- Created and maintained key documentation including Talend User Guide, Talend Developer Guide, Technical Architecture Documents, API Development Standards, Software Development Approach and several others
- Leading the implementation efforts for IBM API Connect in support of Application Integration

Anthem Inc. - Atlanta, Georgia, United States
Senior Solutions Engineer Advisor

October 2013 – July 2018

- **Lead Logical and Physical Data Modeler** for an enterprise Operational Data Store (ODS) based on a multi-tier architecture spanning several data domains
 - o The model objects included tables, keys, indexes, views, database links, synonyms, external tables, users, and roles
 - o Defined the models in PowerDesigner 16.5, generated the corresponding DDLs, and managed the SQL deployments across multiple databases, servers, and SDLC environments to Oracle 11g/12c LUW and Exadata platforms
- **Architect** for Person Domain, an MDM implementation
 - o Developed the solution architecture and design, and resource plan along with leading the implementation efforts
 - o Led the development of the Master Data Management (MDM) Architecture and related artifacts
 - o Developed a roadmap of the evolution of the enterprise integration application portfolio from current to future state
 - o Oversaw technical teams in the design, build, test & operation of integration solutions
- **Lead Developer** of a Java enterprise application that utilized EJBs and Spring to update an ODS and corresponding source systems. The component was developed by leveraging Maven, Artifactory, and Bamboo
 - o Managed third-party relationships involved in end-to-end integration
- **Data Quality Team Lead** responsible for quantifying, qualifying and improving data quality metrics associated with an enterprise ODS
 - o Led a team of four to develop and implement a data profiling and produce analytics reports with Informatica Data Quality
 - o Oversaw the development of an error and auditing system that produced periodic reports
 - o Led the team efforts to track, report and reduce the KPI around the ODS error rates; ultimately leading to improved data quality
- An integral member of architectural steering group for Enterprise Information Hub (eHUB) ODS, a solution to aggregate data from disparate legacy source systems and deliver it through a high performance highly available system
- Led the stabilization and enhancement of the Consumer Hub an Infosphere MDM implementation.

- Led the efforts to optimize the configuration, reducing code bloat and updating Business Proxies to improve overall performance
- Participated in business and technical requirements gathering, use-case discovery, and platform analysis
- Worked closely with customer units' functions to analyze their integration landscape and developed modernization strategies
- Actively contributed to the wider Anthem Enterprise architecture
- Assisted the test of the applications as per standards and procedures of Anthem for internal quality assurance
- Ensured knowledge transfer to technical team thru adequate documentation and training.
- Participated in the pilot of Agile transformation for the development teams. Participated in various scrum teams in both Product Owner and Developer roles during and after the Agile transformation.

IBM Corporation, New York, New York, United States

July 1998 – September 2013

Managing Consultant

MDM Assignment History (*Client names withheld due to privacy clause in contracts with IBM*)

Architect, Global Industrial Company

Architect and implementer of a platform upgrade from Infosphere MDM 9.0.1 to 10.1

- Converted the existing custom code elements including data additions and extension, behavior extensions, and business proxies
- Led the customization the Data Stewardship and Business Administration UIs
- Developed the upgrade project plan, the product install guide and the developer workstation set up guides and other knowledge transfer documentation.
- Performed the MDMS 10.1 installation and deployed the customized EAR
- Led a road map effort to identify the business and functional requirements to solution and scope a Gen 2 development effort based on the upgraded MDM platform

Lead Developer, International Banking Institution

Lead designer and developer for the core components of a MDM 8.5 based solution. The solution was designed to create, and maintain, an index of existing client and relationship information across several hub data stores in order to provide a single view of the customer.

- Responsible for developing the services design, managing the development team
- Engaged customer units to facilitate integration modernization strategies
- Interfaced with the client to develop requirements and refine project scope, developed the final solution
- Developed several of the key frameworks used by the custom business proxies
 - Key design components included additions, extensions, searching, and customized business proxies

Architect / Lead Developer, Major Insurance Institution

Senior Member of the design team, made significant contributions to High-Level solution design and the Client 2.0 Deployment Solution Design

- Produced several low-level design documents for various initiatives including the Conversion solution, the Matching subsystem, Selective Component ByPass, and others.
- Served as developer on various projects and Proofs of Concept
 - These efforts included the development of custom components and business proxies as well as data additions and extensions, behavior extension,; customized response constructors, and customizations to the notification framework to publish to downstream systems
- Developed several UNIX and Perl scripts to help automate the Conversion process, and performed WAS runtime and application performance analysis
- **Lead Developer** for several sub-projects over multiple iterations and mentored junior members of the client team.
 - The development was done using the Agile methodology
- Installed, configured, and deployed the WebSphere Customer Center (WCC) product
- Performed performance testing and Proof of Concept development for several initiatives, including Suspect Processing, Data Conversion, and customer Services development
- Served as **Lead Designer** and a system analyst for various project spanning an entire Enterprise CRM product development lifecycle
- Specified the integration-specific aspects of enterprise & solution architectures

Lead Developer, National Banking Institution

Lead Designer and developer for the core components of a WCC based solution

- The Java/J2EE effort comprised of customizing the messaging infrastructure, Request/Response framework, and the Publishing/Notifications subsystem
- Worked with a large team in a concurrent development environment to help drive forward a solution that combined mainframe and client/server programming
- Developed a custom parser for the OAG messaging standard and developed several behavior and data extensions.

Developer, Major Banking Institution

Developed Java and J2EE components for the WCC product suite that enhanced the functionality of the ETL conversion of an ECRM project

- Enhanced the feature set and stability of multi-threaded Batch Processing framework along with delivering custom components to enhance performance and implement business logic
- Mentored junior team members and produced a best practices document for WCC development
- Performed MQ configuration as part of the ODS framework

IBM Corporation, New York, New York, United States
Managing Consultant

July 1998 – September 2013

Other Assignment History: (Client names withheld due to privacy clause in contracts with IBM)

Lead Developer, Global Financial Services Company

Lead Developer and **Designer** that trained and led a team of four in designing several J2EE components that collectively acted as the hub and mediator for a virtual server host provisioning system. The solution was based on Spring, Castor, MDBs and related J2EE technologies.

- Supported development of the 'Mediator' subsystem, provided new feature sets allowing for 5+ releases annually
- Initiated and solutioned a multi-phase re-architecture and refactor (as applicable) of the key components to reduce the complexity and fragility of the existing code base and apply industry best practices
 - Resulted in increased development velocity for teams interfacing with these components, faster production issue resolution, and a more robust solution overall
- Allowed for the addition of several long requested system enhancements
- Facilitated the evaluation and selection of Integration Application Platform and designed the appropriate architectural backend services
- Governed the integration process across all phases of delivery

Developer, Major Media Conglomerate

Part of development team that delivered the fifth release of an e-commerce content solution. The solution components included Spring, Hibernate, Apache Velocity, & Aqua Logic Service Bus.

- Responsible for an email based gift card notification system that integrated with the e-commerce magazine subscription website

Lead Developer, Major Online Retailer

Designed and developed a solution integrating Documentum WebPublisher (WP) with WebSphere Commerce Suites (WCS) via XDQL integration.

- Designed, in tandem with the Architect the object model and integration techniques to support WebPublisher customizations requirements
- Developed and deployed DocApp, DFC and DQL development with XML generation and export; and JAR deployment and Java Method Server configuration.

Developer, IBM SCORE Product

Developed key lifecycle components of the product that integrated many of the major components of the system using tools and technologies such as Java, ClearQuest, ClearCase, WSAD, XML, Documentum, and others.

- Debugged/tested various development issues; participated in Build Verification Tests

Support Technician, IBM GxPharma Product Support

Addressed problems ranging from installation correctness verification to system reconfiguration, to complex problems requiring multiple code changes in Java, JavaScript, HTML, and DocBasic

- Supported the Documentum-based regulatory compliance product GxPharma,
- Served a global client base working in tandem with Documentum.
- Used tools and technologies such Documentum 4/5, AnnoDoc, RightSite and Docbasic
- Communicated with clients to facilitate problem resolution
- Quickly analyzed and resolved problem tickets to ensure customer satisfaction

Technical Lead / Junior Architect / Lead Developer, Major Media and Entertainment Conglomerate

Completed an enterprise content management project for a division of a major media and entertainment conglomerate. During the first two releases of project, which were developed

using Vignette 6, led a team of five that designed and developed the data access layer using Rational Rose, WSAD 4.x, and the open source JDO framework Castor

- Led the design effort of the value-object model and participated in several key development efforts including publishing
- For the third project release, the application was ported to Vignette 7.1 with the development being performed with WSAD 5.0
- During release, redesigned and validated the complete security model for the system. Upon completion, led the efforts for custom widget development, which included co-designing and developing several widgets to fulfill complex core requirements
- Performed data modeling, content analysis, business and use-case analysis

Lead Developer, Leading Securities Exchange

Led a content management project, based on divine's® Content Server, Content Centre and Catalog Centre application platforms. Developed vital components including customized workflows, security and Singleton-like assets along with JSP templates

- Developed and validated the asset framework, which was a key component of the system
- Mentored team and was a technical advisor to the client sponsored third-party contractor
- Maintained a C program that provided up-to-date financial data for use in the system

Lead Developer, Major Financial News Publication

Lead Developer on an international project in London, a divine® Content Server 3.6 solution

- Integral in developing a highly customized user interface that included security and tabbed multi-page forms
- Designed and developed several custom back-end components in addition to front-end templates using technologies ranging from JSP to HTML to JavaScript

Lead Developer / Architect, Major Pharmaceutical Corporation

Co-designed the content management system using the Content Server 3.6 platform. Led the team that provided a customized solution including providing an advanced user management system with automatic replication, automated workflow, and advanced security system, whose backend components seamlessly integrated with the dynamically delivered, JSP developed site.

- Mentored junior programmers on the project
- Assisted in various defect resolution activities

Lead Developer, Major Fabric Company

Collaborated to deliver a successful, first of its kind, product integration.

- Part of design and development team for the first integration of Websphere Commerce Suite and the OpenMarket Content Server platform
- Installed the Content Server platform
- Instrumental in the development of the OpenMarket components of the system

Developer / Technical Lead, Major Media and Publishing Conglomerate

Key developer on a multi-million dollar project implementing a content management system

- Extensive development based on customization of the IPS Content Server 2.1 system including several system customizations

- Designed and developed an XML parser in Java that performed text manipulation/ translations based on custom markup language
- Architected the markup language that provided a pseudo-programming environment for implementing complex solutions
- Role extended to **Technical Lead** for the implementation of a major subsystem, including managing several client and third party resources

Architect / Developer, Major Securities Holding Corporation

Developer on a \$370K project to implement a Vault Registry pilot. Installed and configured Vault Registry, a system designed to implement digital certificate solutions using PKI technology, on an RS/6000.

- Designed and developed custom C/C++ code in addition to integrating technologies such as LDAP and DB2
- Administered an NT and AIX systems, performed network troubleshooting and web development
 - Performance on this engagement was so impressive I was specifically requested to do the follow-on work
- Developer on a \$120K follow-on project designing the architecture to take a pilot system developed during previous project into production
- In addition to designing the system architecture and its integration into the corporation's network, also developed a production plan for system maintenance and disaster recovery

Developer, Global Banking Institution

Designed and developed an inventory tracking and management system using Microsoft Access and Visual Basic for Applications

- The system featured dynamic report generation and complete CRUD capabilities
- Successfully integrated and deployed this system within current Help Desk Management application

EDUCATION and AREAS OF EXPERTISE

M.S. in Computer Science, New York University Tandon School of Engineering, 1998-2002 (pend)

B.S. in Computer Science, Polytechnic University of New York, 1998

Industries:	• Academia • Banking • Communications • Government (local) • Insurance	• Media and Entertainment • Pharmaceuticals • Securities • Service Sector (IT Services)		
Project Domain:	• Application Development • Business Analytics and Optimization • Content and Knowledge Management • Data Architecture	• Digital Certificate Security • Master Data Management • Systems Integration • Systems Migrations		
Operating Systems:	• AIX • ESXi • FreeNAS/TrueNAS • Linux	• MS-DOS • Solaris • Windows • Macintosh		
Computer Languages:	• Assembler • Basic • C/C++ • HTML • Java	• JavaScript • JSP • Lua • PASCAL • Perl	• PHP • Python • SQL • UNIX Shell	• VBScript • Visual Basic • XML • XSLT
RDBMS:	• Oracle 12c • DB2 10 • MS Access • Mongo	• SQLite 3 • MySQL • MariaDB •		
Development Tools:	• Eclipse • IntelliJ • Rational Software Architect	• Visual Studio • Talend • Android Studio		
Applications:	• Informatica Data Quality • MS Office Suite • MS Project • Poseidon • PowerDesigner	• Rational Rose • Rational Team Concert • TOAD • Visio		
Methodologies	• IBM GS Methodology • Agile	• PM 2000		
Platforms:	• Android • CMSynergy • Content Server 2.1, 3.5 • Documentum 5 • Drupal 6, 7, 8 • Atlassian Bamboo, BitBucket, JIRA	• Joomla 1.x, 2.5, 3 • Vignette 6, 7.1 • Websphere Customer Center (WCC) Infosphere MDM • GitLab
