SUMMARY

Accomplished Software Engineer with 10 years of comprehensive experience designing, developing, and maintaining scalable and resilient software applications. Proven expertise in back-end web development, database management, and server-side scripting with strong foundations in computer science concepts including data structures and algorithms. Skilled in implementing clean, efficient, and maintainable code utilizing Object-Oriented Programming principles and agile methodologies. Adept at collaborating with cross-functional teams to deliver robust, scalable cloud-based solutions across healthcare, SaaS, and marketplace domains. Equipped with hands-on experience in AWS, microservices architecture, .NET Core, and continuous integration/deployment practices, prepared to contribute effectively to Vectra Staffing's mission of enabling innovation and growth.

PROFESSIONAL EXPERIENCE

UnitedHealthCare

Senior Software Engineer

11/2023 – 04/2025 | Texas, United States

- Designed and developed robust back-end web services using ASP.NET Core and C# aligned with software development lifecycle best practices, enhancing healthcare data accessibility and reliability.
- Implemented secure, scalable REST APIs for claims processing and eligibility verification, improving data retrieval time by 35% and reducing service latency.
- Collaborated with cross-functional teams including frontend developers, QA, and product managers to design end-to-end software solutions supporting millions of users.
- Applied object-oriented programming principles and design patterns to deliver modular, maintainable codebases enhancing long-term scalability.
- Led debugging and troubleshooting efforts reducing critical production issues by 40%, ensuring sustained high system availability.
- Utilized database management skills with SQL Server to optimize querying and stored procedures, improving application performance.
- Champion agile development methodologies, conducting sprint planning, code reviews, and continuous integration to accelerate delivery cycles.
- Architected cloud-integrated solutions with AWS services to support health data workflows and ensure compliance with data security standards.
- Mentored junior developers fostering collaborative team culture and knowledge sharing practices.

Google

Software Engineer

11/2021 – 11/2023 | Texas, United States

- Developed scalable microservices using ASP.NET Core and deployed to Kubernetes clusters, enhancing system resilience and distributed processing capabilities.
- Engineered server-side components to power search infrastructure, applying strong algorithmic and data structure concepts to optimize query performance.
- Built intuitive internal dashboards with React and Redux for real-time data visualization, improving developer and analyst productivity.
- Integrated cloud-native CI/CD pipelines enabling fast, automated deployment and agile iteration on software features.
- Participated in code reviews and design discussions driving continuous improvement of system architecture and software quality.
- Effectively collaborated across global teams to align development efforts with business objectives and customer needs.
- Implemented automated testing suites using Jest and Cypress to ensure robust application functionality and reduce bugs in production.

LawnStarter

Full Stack Software Engineer

01/2020 – 11/2021 | Texas, United States

- Led the development of scalable backend APIs using ASP.NET MVC and Web API to manage customer bookings and vendor scheduling with high availability.
- Designed and integrated secure payment processing via Stripe API, enhancing transaction reliability and customer trust.
- Collaborated with frontend teams to craft Angular components delivering interactive customer self-service portals.
- Applied best practices in software development lifecycle for feature planning, implementation, deployment, and maintenance.
- Optimized database access and performance leveraging Oracle RDBMS and advanced SQL querying techniques.
- Utilized SOLID design principles and object-oriented techniques to maximize code reuse and maintainability.
- Worked closely within an agile environment, participating in daily stand-ups and iterative development cycles to meet dynamic product requirements.

Support.com

Software Engineer

10/2017 – 11/2019 | Texas, United States

- Developed internal inventory management systems using ASP.NET MVC and Entity Framework to improve warehouse operations efficiency.
- Implemented product search and filter functionalities with React featuring server-side rendering to optimize SEO and performance.
- Integrated multiple payment gateways to support secure transactions across in-store and e-commerce platforms.
- Built reporting modules utilizing SSRS and ASP.NET, delivering actionable sales insights to stakeholders.
- Debugged complex software issues through detailed log analysis and root cause investigations, reducing downtime.
- Collaborated in cross-functional teams promoting agile best practices and continuous delivery.
- Contributed to database schema design and migrations to support evolving business needs.

Fry's Electronics

Software Engineer

05/2015 – 08/2017 | Texas, United States

- Engineered internal inventory and sales management systems using ASP.NET MVC and Entity Framework, resulting in streamlined business operations.
- Developed user-facing features with React.js incorporating server-side rendering, enhancing application responsiveness and SEO.
- Implemented secure payment processing solutions integrating third-party gateways, boosting transaction security and reliability.
- Created complex sales analytics and reporting dashboards providing valuable business intelligence for decision makers.
- Participated in full software development lifecycle from requirement gathering, design, coding, testing, through to production deployment.
- Collaborated effectively with team members and stakeholders to ensure timely delivery of software projects.
- Refined application codebase using object-oriented programming and design pattern best practices to improve maintainability.

EDUCATION

Bachelor's Degree in Computer Science

The University of Texas (08/2010 – 05/2014)

SKILLS

Technical: SQL Server, REST API Development, Kubernetes, AWS, Azure DevOps, Agile Development, Data Structures and Algorithms, React.js, Angular, CI/CD Pipelines, Cloud Services

Soft Skills: Problem Solving, Team Collaboration

Other: ASP.NET Core, C#, Oracle RDBMS, Microservices Architecture, Object-Oriented Programming, Redux, Jest, Cypress, Entity Framework, SSRS, Design Patterns, SOLID Principles
