

Mykola Bisovskyi

Full Stack Software Engineer

✉ mbisovskyi@gmail.com ☎ 313-605-2533 📍 Detroit, MI 🌐 [mbisovskyi](#)

</> Programming Skills

Languages and Frameworks:

- Primary - C#, VisualBasic, JavaScript, TypeScript, Angular, ASPX, HTML/CSS, XML, Asp.Net Core, Asp.Net Core Identity, Microsoft Entity Framework, SQL.
- Secondary - Windows Forms, Python, Django REST Framework, React, XAML, WinU13, .NET MAUI, Java, Django, JavaSpring, T-SQL

Technologies:

- Primary - Visual Studio, VS Code, SSMS (SQL Server), Azure DevOps, Teams, Microsoft Word & Excel, JSON, JWT, Postman, DynamicPDF.
- Secondary - IntelliJ, Adobe XD, GitHub, Slack, YouTube API, Google Charts API, AWS.

📁 Experience

Software Developer, Horizon Systems & Services Inc.

01/2023 – Present | Remote

- Policy Data Conversion - Designed and implemented a robust console application to automate the conversion of insurance policy data between carriers. This solution streamlined data migration workflows, ensured accurate transformation of policy structures, and reduced manual processing time. The application was built with scalability and maintainability in mind, supporting future enhancements and integration with additional carriers.
- Solution Seeker & Efficient Troubleshooter - Developed strong expertise in diagnosing and resolving complex technical issues with speed and accuracy. Consistently applied structured debugging practices to identify root causes, implement effective fixes, and prevent recurring problems. This proactive approach improved overall team throughput, reduced blockers, and contributed to a measurable increase in delivery velocity across the development cycle.
- Subject Matter Expert & Go-To Resource - Built deep, comprehensive knowledge of the company's product suite to support colleagues in designing and implementing solutions aligned with client requirements. Acted as a trusted internal advisor, guiding teams toward best-fit configurations that enhanced product reliability, improved overall quality, and strengthened customer satisfaction. Played a key role in fostering a culture of technical excellence and continuous improvement across the organization.
- Production Deployment Support - Oversaw the day-to-day execution of deployment processes, including routine production environment releases, to ensure updates were delivered smoothly, accurately, and with minimal disruption. Collaborated closely with development and operations teams to validate changes, track deployment progress, and uphold system stability throughout regular release cycles
- Client Satisfaction - Consistently focused on delivering solutions that align with client needs and expectations, ensuring a positive and reliable experience throughout the engagement. Actively gathered feedback, clarified requirements, and adapted approaches to maintain strong relationships and high satisfaction levels. Contributed to long-term client trust by providing dependable support, clear communication, and high-quality outcomes.

- **Workload Refinement & Task Breakdown** - Actively participated in refinement sessions to accurately estimate workload, clarify requirements, and decompose complex initiatives into manageable, well-defined tasks. Leveraged analytical thinking and team collaboration to ensure work was planned efficiently, enabling faster delivery, reduced uncertainty, and smoother execution throughout the development cycle.
- **Self-Improvement & Continuous Learning** - Demonstrated a strong commitment to ongoing professional development through consistent self-education and skill expansion. Proactively sought out new technologies, best practices, and industry trends to stay ahead of evolving requirements. Applied newly acquired knowledge directly to day-to-day work, improving solution quality, strengthening technical decision-making, and contributing to a culture of continuous improvement within the team.
- **Personal Projects** - Engaged in independent, hands-on development initiatives to strengthen technical expertise and explore new technologies beyond day-to-day responsibilities. These projects provided opportunities to experiment with architectural patterns, refine problem-solving skills, and build practical solutions that reinforced continuous learning and professional growth.

Truck driver,

2015 – 2022 | Interstate

Sherwood Food, SB Trucking, Visum Logistics, Sherwood Harvest Food

- 7+ years and 500,000+ miles accident free
- Excellent communication and conflict de-escalation skills

Projects

AllStarters, *A modular authentication codebase designed to accelerate project implementation. It can be seamlessly integrated into new or existing applications without introducing risk, enabling teams to adopt secure, standardized authentication functionality with minimal effort.*

01/2025 – Present

Capstone - Trucker Finance Tracker, *An application that allows the user to track budget based on the trips data added when a trip was started.*

08/2022 – 09/2022

- Technologies used: Python, JavaScript, Django, Django REST Framework, React, HTML/CSS, MySQL Workbench, React Google Charts API, Postman, JSON, JSON Web Token, Adobe XD, Entity Relationship Diagram.
- Application features include:
 - User account registration, login, and logout (Authentication and JSON Web Token).
 - User profile creation, including trucker status that will be used for creating a new trip feature (Frontend technologies: JavaScript, React, HTML/CSS; Backend technologies: Python, Django, Django REST Framework).
 - Updating user's profile page information (Frontend and Backend technologies).
 - Displaying user's total income and total costs for the past year (Frontend technologies).
 - Trip creation that allows for a user to input city to start a trip from and city to end a trip at as well as expected income and distance needs to be driven (Frontend and Backend technologies).
 - Updating active trip information (Frontend and Backend technologies).
 - Cost creation of an active trip that allows for a user to input a cost title and its amount to decrease an expected trip income (Frontend and Backend technologies).
 - Saving all information for an active trip when the trip finishes (Backend technologies).
 - Displaying all of the necessary information about the two most recently completed trips (Frontend technologies).
 - Displaying all of the necessary information about trips between chosen dates (Frontend technologies).
 - Displaying all information about costs for chosen completed trip as well as total amount of costs for that trip (Frontend technologies).
 - Drawing a graph of the user's performance based on the data of completed trips of chosen period of time (React Google Charts API).

Education

- Associates in Insurance Diploma,** *The Institutes Knowledge Group* 01/2025 – 12/2025 | Online
- Earned the AINS designation, demonstrating a solid understanding of core insurance principles, industry practices, and risk management fundamentals. This achievement reflects a commitment to professional development and a strong foundation for supporting clients and teams within the insurance domain.
- Full Stack Web Development Certificate,** *DevCodeCamp* 2022
- 14-Week project-based coding bootcamp building real-world full stack applications and deploying them to the cloud utilizing DevOps best practices.
 - Utilized JavaScript, Python, and Java for algorithm development, coding, debugging and building of functions and graphical user interface applications.
 - Learned to create good user pleasing interfaces by utilizing UI/UX knowledge.
- Bachelor of Agricultural Machines Engineering,** 2013
Berezhany Agrotechnical Institute, Ukraine
