PROFESSIONAL SUMMARY

Software Engineer with 4+ years of experience designing, developing, and deploying full-stack applications across Healthcare and Financial domains. Skilled in Java, Spring Boot, React.js, REST/GraphQL APIs, and cloud platforms (AWS, Azure), with proven expertise in microservices, CI/CD pipelines, and scalable system architecture. Experienced in delivering data-driven solutions, optimizing clinical workflows and financial services processes, and building secure, high-performance enterprise systems.

SKILLS & CERTIFICATION

Programming Languages and Methodologies: C++, Java, Python, JavaScript, TypeScript, SQL, SDLC, Agile/Scrum, TDD

Front End: HTML5, CSS3, Tailwind CSS, XML, React.js, React Hooks, Redux, RESTful API

Back End: Spring Boot, Spring MVC, Spring REST, Spring Batch, Spring Data JPA, Spring AOP, Spring IoC

Security & Compliance: Spring Security, OAuth2, JWT

Microservices & Architecture: Microservices Architecture, Distributed Systems, API Design, Service-Oriented Architecture (SOA)

Testing and Tracking: JUnit, Mockito, Postman, Confluence, JIRA

Cloud & Database: AWS (S3, EC2, CloudFormation, API Gateway, EKS), Azure, PostgreSQL, MongoDB, DynamoDB, Redis

Logging & Monitoring: ELK Stack (Elasticsearch, Logstash, Kibana), Grafana, AWS CloudWatch

CI/CD and DevOps Tools: Git, GitHub Actions, GitLab, Jenkins, Docker, Kubernetes, Kafka, RabbitMQ, GraphQL

AI & Developer Productivity: GitHub Copilot, ChatGPT API Integration, AI-Assisted Code Generation, LangChain, GEN AI, LLM

Certification: AWS Certified Developer – Associate (DAV-C01)

WORK EXPERIENCE

Citigroup, USA (Contract) | Software Engineer

September 2024 - Present

- Engineered Java-based Spring Boot microservices supporting core banking and risk platforms, enabling secure processing of high-volume financial transactions and improving service response time by 32% through optimized REST APIs and asynchronous processing.
- Implemented enterprise-grade authentication and authorization using Spring Security and JWT, strengthening API access controls across internal banking services and reducing unauthorized access incidents by 40% while meeting Citi's regulatory and security standards.
- Developed scalable front-end components using React.js to support internal operations dashboards for transaction monitoring and service health visibility, improving operational efficiency and reducing manual intervention by 27%.
- Deployed containerized microservices on AWS EKS with centralized logging and metrics using AWS CloudWatch, improving production observability and reducing incident resolution time by 35% in high-availability banking environments.
- Integrated workflows using Apache Kafka and automated CI/CD pipelines with GitHub Actions, accelerating release cycles by 30% and enabling secure experimentation with GenAI features via ChatGPT API integration for knowledge retrieval and productivity use cases.

LTIMindtree, India | Software Engineer

January 2022 – June 2023

- Architected backend services using Java and Spring Boot to support healthcare applications processing EHR, claims, and provider data, improving service throughput by 28% and reducing API latency under concurrent clinical workloads.
- Developed data access layers using Spring Data JPA and PostgreSQL to manage patient, encounter, and claims records, optimizing query performance and reducing database response times by 31% across care management workflows.
- Implemented secure authentication and authorization using OAuth2, enforcing role-based access control for clinical and administrative users and strengthening HIPAA-aligned API security across healthcare microservices.
- Built responsive user interfaces using React Hooks for care coordination and operations dashboards, improving clinician interaction efficiency and reducing UI-related defects by 26% during healthcare production releases.
- Provisioned cloud infrastructure on AWS (EC2, S3, CloudFormation) to host HIPAA-compliant healthcare environments, enabling repeatable deployments and reducing configuration errors by 35% across development and QA systems.
- Validated system reliability by authoring unit tests using Mockito, monitoring clinical service health with Grafana, and tracking defects through JIRA and GitLab, reducing post-release defects by 29% and improving sprint predictability in Agile healthcare SDLC delivery.

Cognitive Healthcare Solutions, India | Associate Software Engineer

July 2020 – December 2021

- Developed TypeScript-based frontend interfaces using Tailwind CSS and Redux for patient management and clinical dashboards, improving data entry efficiency and reducing manual errors by 22%.
- Implemented Spring Boot microservices with Spring Data JPA, AOP, and IoC for managing EHR, lab results, and appointment data, optimizing RESTful API performance and reducing response times by 28% for healthcare workflows.
- Built and tested APIs using RESTful/GraphQL endpoints and Postman, applying TDD practices, which increased defect detection in early development by 35% and improved reliability of clinical data integrations.
- Containerized services using Docker and automated deployment pipelines with Jenkins on Azure, enabling repeatable deployments and reducing manual configuration errors by 30% across development and staging environments.

EDUCATION

Master of Science in Computer Science

University of Central Oklahoma, Edmond, OK

GPA: 3.6 / 4.0
