SUMMARY

Software Engineer with 3+ years of experience designing and deploying scalable full-stack and AI-powered applications across financial and banking domains. Proficient in building enterprise-grade solutions using React.js, FastAPI, Flask, and Django, integrated with RESTful APIs, PostgreSQL, and AWS. Skilled in developing microservices, automating CI/CD pipelines, and implementing machine learning models to enhance business decision-making. Experienced in optimizing backend performance, improving UI responsiveness, and ensuring data security compliance. Passionate about cloud-native architectures, DevOps automation, and delivering reliable, data-driven software solutions.

TECHNICAL SKILLS

Front-end Technologies: React.js, Redux, Next.js, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Bootstrap, Material-UI, SASS, SCSS, Figma, Responsive Web Design, Web Accessibility (WCAG)

Back-end & API Development: Python (Flask, Django, FastAPI), RESTful APIs, GraphQL, WebSockets, JWT, OAuth2, Microservices, Bash, Shell Scripting, Node.js, Express.js, Java, Spring Boot

Databases: PostgreSQL, MySQL, MongoDB, DynamoDB, Firebase, SQLite, Data Modeling, Schema Design, Vector DB

Cloud Platforms & DevOps: AWS (Lambda, EC2, RDS, S3, DynamoDB, IAM, Elasticsearch), Azure (ML, DevOps, Data Factory), Docker, Kubernetes, Jenkins, GitHub Actions, GitLab, Nginx, Linux, Terraform

AI, ML & Data Engineering: Big Data/ML Ops tools, TensorFlow, Keras, PyTorch, LLMs (Large Language Models), OpenCV, Generative AI, LangChain, Retrieval-Augmented Generation (RAG), AI Agents

Testing & Quality: Pytest, Selenium, Postman, OpenAPI, React Testing Library, Unit Testing, Integration Testing, JUnit

Other Technical Skills: CI/CD Automation, Design Patterns, Data Structures & Algorithms, Git, Jira, Agile Methodology

PROFESSIONAL EXPERIENCE

Software Engineer Intern, JPMorgan Chase

Mar 2025 – Present | Remote, USA

- To address inconsistent credit assessments, built machine learning pipelines using scikit-learn and XGBoost that improved credit risk prediction accuracy by 19% across enterprise lending workflows.
- Responding to high customer query volumes, integrated NLP-based virtual assistants using Hugging Face Transformers, reducing manual support effort and improving average response turnaround time by 33%.
- When analytics dashboards experienced latency, engineered asynchronous REST APIs with FastAPI and optimized PostgreSQL, accelerating data synchronization and improving real-time financial reporting performance by 25%.
- For real-time trading insights, synchronized React dashboards with backend microservices, enabling continuous updates of holdings, performance metrics, and portfolio insights without impacting frontend responsiveness.
- While working at JPMorgan Chase, implemented a cloud-native portfolio analytics platform using React.js, FastAPI, and AWS, enabling secure processing of 1M+ daily transactions with consistent sub-second response times.
- To strengthen compliance readiness, enhanced database indexing and ETL workflows, cutting query latency by 41% while improving audit traceability aligned with FINRA and SEC regulatory standards.

Software Engineer, LTIMindtree

Aug 2021 – Dec 2023 | Odisha, India

- In a high-volume banking environment, developed modular financial dashboards using Flask microservices and PostgreSQL, enabling real-time account analytics and scalable credit-risk visualization across internal platforms.
- Faced with slow onboarding systems, optimized REST APIs using asynchronous Flask patterns and caching mechanisms, improving API response times by 38% and supporting higher concurrent user loads.
- To meet strict security requirements, implemented OAuth2 and JWT-based authentication frameworks, enforcing role-based access control and maintaining regulatory compliance with RBI and PCI-DSS guidelines.
- After recurring production defects, established automated API testing pipelines using PyUnit and Postman, reducing post-deployment issues by 28% and stabilizing continuous integration workflows.
- For transaction-heavy services, configured MongoDB and PostgreSQL schemas with indexing and query optimization, ensuring reliable high-throughput processing for loan eligibility and reconciliation operations.
- To accelerate releases, containerized Flask services with Docker and integrated GitHub Actions-based CI/CD pipelines, significantly reducing deployment downtime and improving release cycle consistency.

CERTIFICATIONS

- Microsoft SQL Server Database Design([link](#))
- Tableau A-Z: Hands-On Tableau([link](#))
- SQL Certification([link](#))
- Amazon Web Services ([Link](#))

EDUCATION

Masters of Science, Arizona State University

Jan 2024 – Dec 2025 | AZ, USA

Information Technology and Project Management

Bachelors of Technology, National Institute of Technology Rourkela

Aug 2019 – Jun 2023 | Odisha, India

Mining Engineering
