SUMMARY

- Cloud & DevOps Engineer 5 years of hands-on expertise in designing, implementing, and managing scalable cloud solutions on AWS and Azure across multiple domains, including insurance, retail, and IT services.
- Skilled in cloud architecture, microservices deployment, containerization, and orchestration using technologies such as Docker, Kubernetes (EKS/AKS), and Helm, ensuring high availability and operational efficiency.
- Proficient in Infrastructure as Code (IaC) using Terraform, CloudFormation, and Azure Blueprints, enabling automated, consistent, and repeatable provisioning of cloud infrastructure.
- Strong background in CI/CD pipeline design and automation using GitHub Actions, Azure DevOps, Maven, and CodeDeploy, facilitating rapid and reliable software releases.
- Hands-on experience in cloud security, identity management, monitoring, and observability, including IAM, Key Vault, KMS, CloudWatch, Azure Monitor, Prometheus, and Grafana, ensuring secure and compliant cloud operations.
- Experienced in cloud migration, ETL data processing, and disaster recovery implementation, with a focus on optimizing infrastructure, standardizing deployments, and improving system reliability and maintainability.

SKILLS

Cloud Platforms	AWS (EC2, S3, VPC, RDS, Redshift, ECS Fargate, Lambda, CloudFormation, API Gateway, CloudWatch, Secrets Manager, WAF, KMS), Azure (VM, VNET, Hub-and-Spoke, NSG, Azure Firewall, Azure AD, Key Vault, Azure Migrate, Azure Monitor, Azure Site Recovery, Azure Backup)
Infrastructure as Code (IaC)	Terraform, CloudFormation, Azure Blueprints, ARM Templates
CI/CD & DevOps Tools	GitHub Actions, Azure DevOps Pipelines, Maven, JUnit, AWS CodeDeploy, Jenkins (optional), Git, GitLab
Containerization & Orchestration	Docker, Kubernetes (EKS, AKS), Helm, Calico, Istio, Amazon ECR
Monitoring & Logging	Amazon CloudWatch, Prometheus, Grafana, ELK Stack, Log Analytics, Application Insights
Programming & Scripting	Python (including PySpark for AWS Glue), Bash, PowerShell
Security & Compliance	IAM, RBAC, KMS, Key Vault, Conditional Access, PIM, WAF, Azure Policy, SCPs, Trivy, OWASP ZAP
Networking	VPC, Subnets, Route Tables, NAT Gateway, VPN, NSGs, Load Balancers (ALB), Hub-and-Spoke VNET topology
Databases & Data Engineering	SQL (PostgreSQL, Azure SQL), Amazon Redshift, Azure SQL Database, DynamoDB, S3, Storage Accounts, ETL (AWS Glue, Python Spark)
Project & Collaboration Tools	Jira, Confluence, Agile, DevOps methodology, Runbooks, Documentation
Cloud Cost & Governance	AWS Organizations, Service Control Policies (SCPs), Azure Policy, AWS Cost Explorer

WORK EXPERIENCE

State Farm Insurance	Bloomington, IL
Software Engineer – Cloud & DevOps	Apr 2024 – Present
• Migrated the legacy Claims Processing monolith to a microservices architecture using AWS ECS Fargate, enabling independent deployments for 5+ services and reducing release time from 3 hours to 25 minutes, improving overall platform agility. • Designed and deployed a multi-environment AWS VPC with public and private subnets, NAT gateways, route tables, and security groups, providing secure and isolated networks for development, testing, and production environments. • Developed reusable Terraform modules for provisioning ECS clusters, ALBs, RDS PostgreSQL instances, IAM roles, and CloudWatch log groups, standardizing infrastructure and reducing environment setup time by 50%. • Containerized application services using Docker, optimized multi-stage builds, and managed images in Amazon ECR, ensuring consistency across all deployment environments. • Built end-to-end CI/CD pipelines with GitHub Actions, integrating Maven builds, JUnit tests, Terraform automation, and ECS deployment, achieving automated deployments with <15 minutes turnaround. • Implemented blue/green deployments using AWS CodeDeploy and Application Load Balancer, enabling zero-downtime releases and reducing rollback risk for critical claim services. • Set up monitoring and alerting using Amazon CloudWatch Metrics and Logs, creating dashboards for CPU, memory, latency, and error rates, resulting in a 40% faster incident detection and improved operational reliability. • Strengthened platform security by enforcing IAM least privilege policies, KMS encryption for RDS and S3, and AWS WAF rules, safeguarding sensitive claims data and ensuring compliance with internal security standards.	

- Developed an event-driven claims validation workflow using Amazon API Gateway, AWS Lambda, and Amazon SQS, which increased processing throughput by 18% and reduced claim latency.
- Built a data ETL pipeline using AWS Glue (Python Spark) to process claims data stored in S3 and load it into Amazon Redshift, providing near real-time analytics that improved reporting speed by 30%.

Accenture

Cloud Platform Engineer

Hyderabad, India
Aug 2021 – Jul 2023

- Built the cloud foundation for a retail enterprise platform using Terraform modules to provision VPCs, subnets, route tables, security groups, and IAM roles across three AWS regions, enabling consistent and repeatable environment setup.
- Implemented Git-based CI/CD using GitHub Actions, creating pipelines for building, testing, and deploying microservices to multiple environments, reducing deployment lead time by 35%.
- Containerized Java and Node.js microservices with Docker, pushed images to Amazon ECR, and configured automated image builds in GitHub Actions, eliminating manual packaging and reducing release errors.
- Deployed Amazon EKS clusters with AWS VPC CNI, Calico network policies, and private cluster configuration, ensuring secure pod-to-pod communication and preventing public exposure of production workloads.
- Integrated AWS Secrets Manager with EKS using IAM roles for service accounts (IRSA), enabling secure retrieval of database credentials and API keys without embedding secrets in application code.
- Implemented centralized monitoring using Prometheus and Grafana, along with CloudWatch Container Insights, to track pod health, latency, error rates, and resource utilization, improving incident detection and response.
- Added security checks in the CI pipeline using Trivy for container image scanning and OWASP ZAP for dynamic application testing, blocking deployments with high-severity vulnerabilities.
- Designed disaster recovery for critical workloads using AWS Backup and cross-region replication for EBS snapshots and S3 buckets, supporting an RPO target of < 4 hours and enabling scheduled recovery drills.
- Enforced cloud governance using AWS Organizations and Service Control Policies (SCPs), implemented mandatory tagging policies, and enabled cost visibility using AWS Cost Explorer, resulting in a 15% reduction in monthly spend.
- Prepared platform documentation, runbooks, and deployment templates for the client DevOps team, improving release consistency and reducing production incidents by 20%.

SoftAge Group

Cloud Engineer Associate **2021**

India
Jul 2020 – Aug

- Assisted in setting up the Azure foundational environment using Azure Management Groups, Subscriptions, Azure Policy, and Azure Blueprints, ensuring consistent governance across Dev, Test, and Prod environments.
- Supported the implementation of Hub-and-Spoke VNET topology, configuring NSGs, Azure Firewall, and User-Defined Routes to secure network traffic between application and database layers.
- Implemented Azure AD RBAC roles and configured Conditional Access, helping to enforce least-privilege access for development and operations teams.
- Participated in the lift-and-shift migration of on-premise applications to Azure VMs using Azure Migrate, including assessment, replication, and cutover tasks, contributing to a ~30% reduction in infrastructure cost.
- Created reusable Terraform modules for provisioning Azure VMs, Azure SQL Database, Storage Accounts, and NSGs, which reduced deployment time by 60% and improved environment consistency.
- Built Azure DevOps YAML pipelines to automate build, test, and deployment workflows; integrated Azure Artifacts for package storage and Key Vault for secure secret management.
- Configured Azure Monitor and Log Analytics to track VM performance and application logs, setting up alerts for CPU, memory, and disk thresholds to improve monitoring visibility.
- Assisted in implementing backup and recovery using Azure Backup and Azure Site Recovery, along with storage lifecycle policies to manage costs and ensure data protection.

EDUCATION

Master of Science in Computer Science - University of Cincinnati, Cincinnati, Ohio, USA

Bachelor of Science in Computer Science - Gokaraju Rangaraju Institute of Engineering and Technology, Hyderabad, India

CERTIFICATIONS

- AWS Certified Developer – Associate
- HashiCorp Certified: Terraform Associate (003)
