

SUMMARY

Software Developer with 3+ years of experience building and scaling high-performance backend and full-stack applications across enterprise and consulting environments. Strong expertise in Java, Spring Boot, microservices, REST, and GraphQL APIs, with proven impact in performance optimization, system scalability, and cloud-native deployments on AWS and Kubernetes. Delivered measurable improvements, including 55% performance gains, zero-downtime CI/CD pipelines, and reduced production defects through test automation. experience with event-driven architectures, caching strategies, relational and NoSQL databases, and AI-assisted internal tools using LLM frameworks. Known for writing efficient, production-grade code, collaborating in Agile teams, and delivering reliable systems at scale in high-traffic environments.

SKILLS

Programming Languages: Java, Python, C, C++, JavaScript, TypeScript, SQL
Backend & API Development: Spring, Spring Boot, Hibernate, Django REST Framework, FastAPI, Flask, Node.js, Express.js, RESTful APIs, GraphQL, gRPC
Frontend Development: React.js, Angular, Vue.js, Redux, HTML5, CSS3, Tailwind CSS, Bootstrap
Databases & Data Stores: MySQL, PostgreSQL, MongoDB, Oracle, Redis, Elasticsearch, ChromaDB
Cloud & DevOps: AWS (EC2, S3, Lambda, CloudFormation), Microsoft Azure, GCP, Docker, Kubernetes, Terraform, CI/CD Pipelines (Jenkins, GitHub Actions, ArgoCD)
Testing & Quality Assurance: JUnit, PowerMockito, PyTest, Jest, Selenium, Postman, Regression Testing, TDD, BDD
AI & LLM Technologies: LangChain, LangGraph, CrewAI, AI Agents, Large Language Models (LLMs)
Architecture & Methodologies: Microservices Architecture, Event-Driven Systems, Domain-Driven Design (DDD), Distributed Systems, SDLC, Agile, Scrum, Kanban

EDUCATION

Master of Science in Computer Science and Engineering

University of Washington, Seattle, WA

May 2025

EXPERIENCE

ServiceNow, WA Software Developer	Oct 2024 – Current
- Designed and built scalable Spring Boot microservices with REST and GraphQL APIs, improving service response time by 35% through optimized request handling and caching. - Developed high-performance backend services using Java, Hibernate, PostgreSQL, and Redis, reducing database query latency by 40% via indexing and query refactoring. - Implemented event-driven workflows using Kafka-style asynchronous patterns, improving system resiliency and eliminating tight service coupling. - Built AI-assisted internal tools using LangChain and LLMs, enabling faster root-cause analysis and reducing developer debugging effort by 30%. - Containerized applications using Docker and deployed to Kubernetes on AWS, supporting zero-downtime releases and improving deployment reliability. - Enforced automated testing with JUnit, PyTest, and CI/CD pipelines (GitHub Actions), increasing release stability and preventing regression issues in production.	
Accenture, India Advanced Application Analyst	June 2022 – Sep 2023
- Made high-traffic features over 5 times faster by rewriting core Java code, cutting response times from 2.1s to 380ms while successfully handling 40,000+ simultaneous users. - Broke down a large, single application into smaller, manageable microservices, which cut database load by 55% and made the system easier to scale and update. - Built a fully automated deployment pipeline (CI/CD) that reduced software release time from 45 minutes to just 8 minutes and allowed for updates with zero downtime. - Improved data retrieval speeds by 40% by implementing an advanced caching system, ensuring the application remained fast and responsive even during peak traffic periods. - Increased automated test coverage from 30% to 75%, leading to a 50% reduction in bugs reaching production and significantly improving software reliability.	
Infinite Infolab, India Software Developer	Jan 2021 – May 2022
- Developed full-stack web applications using React.js, Node.js, Express, and MongoDB, delivering customer-facing features used by 10K+ active users. - Built RESTful APIs with Django REST Framework and Flask, improving backend throughput by 45% through optimized serialization and pagination. - Implemented frontend state management with Redux and Angular, reducing UI rendering bugs and improving page load consistency. - Designed relational and NoSQL data models using MySQL, PostgreSQL, and MongoDB, supporting scalable data growth without performance degradation. - Automated build and deployment workflows using Jenkins and Docker, cutting manual deployment effort by 60%. - Integrated comprehensive testing using Selenium, Jest, and Postman, significantly improving defect detection before production releases. - Collaborated in Agile/Scrum teams, contributing to sprint planning, code reviews, and architectural discussions to ensure on-time, high-quality deliveries.
