

OLAFF VELAZQUEZ | Full-Stack Software Developer

Holland, Michigan olaffve@outlook.com | (616)-337-5602 (voicemail available)

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 7+ years of experience designing, modernizing, and optimizing scalable enterprise applications. Strong background in **C#, .NET, ASP.NET Web API, Angular, Kafka, SQL Server, PostgreSQL, Docker, and Azure**. Proven track record modernizing legacy systems, owning high-throughput **Kafka microservices**, improving system reliability, and reducing production incidents through **unit and integration testing**. Experienced in Agile/Scrum environments, CI/CD pipelines, and cross-functional collaboration with Product and Security teams.

- Full-Stack Software Developer with hands-on experience building scalable applications using **C#, .NET, ASP.NET Web API, Angular, TypeScript, SQL Server, PostgreSQL, Kafka, Docker, Azure**.
- Developed and maintained APIs between **Angular Frontend (HTTPClient Service)** and **C# WebAPI Controllers**, enabling smooth data flow across systems via **REST APIs** and **JSON**.
- Modernized legacy product (RegScan) by rewriting UI components using **Angular, Angular Material, TypeScript, CSS, Bootstrap**, and **Fuse Angular Template**, improving UX and performance.
- Performed maintenance, debugging, and feature enhancements in **C#, ASP.NET Web API, PostgreSQL, and SQL Server**, resolving production issues and improving reliability.
- Designed and optimized relational databases using **SQL Server, PostgreSQL, Entity Framework, Liquibase, stored procedures, indexing, and query optimization**.
- Took ownership of RBMD.JOB (Kafka microservice) using **Kafka, Docker, and C#.NET**, improving performance and eliminating bottlenecks detected through **Splunk** and **Grafana**.
- Increased developer efficiency by building internal debugging endpoints that simulated Kafka messages without Docker setup, reducing debugging time from hours to minutes.
- Implemented **Unit Testing** and **Integration Testing** to improve code reliability and prevent regressions during deployments.
- Ensured code quality and security compliance using **SonarQube**, secure cookie handling (**HttpOnly**, backend-only access), and industry security standards.
- Worked in Agile/Scrum environments using **Jira** for task management and **Bitbucket/GitLab** for version control and CI/CD pipelines.

TECHNICAL SKILLS

Backend	C#, .NET, ASP.NET Web API, REST APIs, Entity Framework, Kafka, Docker
Frontend	Angular, Angular Material, TypeScript, JavaScript, HTML5, CSS3, Bootstrap, Fuse Angular Template
Databases	SQL Server, PostgreSQL, MySQL, Liquibase, pgAdmin, DBeaver
DevOps & Tools	Bitbucket, GitLab, Jira, SonarQube, Splunk, Grafana, Postman, Azure, Docker
Testing	Unit Testing, Integration Testing

Methodologies	Scrum / Agile
Languages	Spanish (Native), English (Professional working proficiency)

PROFESSIONAL EXPERIENCE

Enhesa, Williamsport, PA / Remote September

2022 – December 2025

Role: Full-Stack Software Developer

Description: Enhesa is a global regulatory compliance company delivering environmental, health, and safety (EHS) legal content at scale. Following the RegScan acquisition, Enhesa modernized and integrated multiple platforms and microservices (**RegScan → Phoenix → RBMD → FLEX**). I contributed to modernizing legacy systems, developing new services, and optimizing **Kafka-based processing**, owning the **RBMD.JOB microservice**, improving performance, building internal debugging tools, supporting Angular UI development from Figma designs, and ensuring secure backend communications and compliance with internal security standards.

Responsibility:

- **RegScan — Legacy Platform Modernization**
 - Maintained and enhanced legacy RegScan platform using **C#, ASP.NET Web API, Angular, SQL Server, PostgreSQL**.
 - Built new UI screens and components using **Angular, Angular Material, Bootstrap, Fuse Angular Template**.
 - Created and improved **REST APIs** to support new business logic and post-acquisition requirements.
 - Developed **unit tests** to increase maintainability and code reliability (xUnit and NSubstitutes).
 - Improved DB performance through **indexing, normalization, stored procedures**, and query optimization.
 - Used **Bitbucket, Jira, Postman, SonarQube** for code quality, testing, security, and Agile delivery.
- **RBMD.JOB — Kafka Processing Microservice**
 - Took full ownership of RBMD.JOB microservice (consumer of regulatory baseline data via **Kafka**).
 - Optimized microservice performance, fixing bottlenecks that caused restarts under heavy payloads.
 - Developed internal debugging endpoints replacing Kafka/Docker dependency, reducing debugging effort from hours into minutes.
 - Implemented **Liquibase** migrations for database schema version control and safe deployments.
 - Created unit **testing and integration** testing for JSON baseline processing.
 - Used **Grafana** and **Splunk** to monitor service health, detect failures and optimize throughput.
- **RBMD Front-End Platform — New Development**
 - Converted **Figma UI designs** into reusable **Angular** components.
 - Created backend endpoints **RBMD.API** and **RB.API** using **ASP.NET Web API (C#)**.
 - Integrated shared Enhesa UI libraries for a consistent multi-product UI experience.
 - Implemented security requirements: **HttpOnly cookies, secure session handling, backend-**

only sensitive data access.

- Collaborated with Product Managers and Security team to resolve vulnerability findings.

Key Achievements:

- Reduced Kafka debugging time significantly by creating internal simulation endpoints (no Kafka/Docker needed).
- Improved system performance and eliminated processing failures caused by high-load Kafka messages.
- Modernized the UI for legacy platform RegScan using **Angular + Angular Material + Fuse Template**.
- Increased code maintainability through **unit/integration** tests and SonarQube compliance.

Environment / Tools:

Backend: C#, .NET, ASP.NET Web API, REST APIs, Entity Framework.

Frontend: Angular, Angular Material, TypeScript, JavaScript, HTML5, CSS3, Bootstrap, Fuse Angular Template.

Databases: SQL Server, PostgreSQL, Liquibase, pgAdmin, DBeaver

DevOps & Tools: Kafka, Docker, Bitbucket, GitLab, Jira, SonarQube, Postman, Grafana, Splunk.

Methodology: Agile / Scrum.

Technological University of Tecamac. Tecamac, Mexico September 2017 - September 2018

Role: Jr. Full Stack Developer - Java, C#. NET

Description: Worked as a **Full-Stack Developer** on a distributed university system, building centralized financial reporting solutions across multiple campuses. Designed data models using **C# and Java (OOP)**, maintained legacy **Java Struts** applications with **MySQL**, and developed parallel **ASP.NET Web API** backends to integrate Java-based systems and centralize data across platforms.

Responsibilities:

- Created endpoints between Web API and Struts API controllers for backend connects to a SQL server database and MySQL databases.
- Created Endpoints between the frontend Angular's HTTPClient Service Module and the Backend WebAPI Controllers in C# using HTTP Protocol to conduct and pass data via API between system-to-system interaction.
- Used HTTP clients to request data from "Exposed endpoints" published from WebAPI.
- Connected to **APIs** using an **API Key** which is used to **verify identity**.
- Used Postman as an online HTTPClient to test API endpoints.
- Built API Keys using URL from existing API endpoint documentation.
- Used WebAPI framework to help build API endpoints.

- Control and manage reports of all technological universities of tecamac through mecasut.uttecamac.edu.mx.
- Developed high quality and structured code modules using Java OOPs concepts.
- Expertise in designing, developing and deploying applications using J2EE Technologies including Servlets, JSP, Struts, Spring, Ajax, JDBC.
- Hands-on experience in various java-programming tools like **Eclipse and Netbeans**.
- Extensively used **Spring Framework** as the controller to handle subsequent client requests and invoke the model based upon user requests.
- Wrote JavaScript validation to validate the fields of the user registration and login screen.
- Used **JDBC** to establish and maintain connection with the **MYSQL database** from the **Java Spring Data Layer**.
- Implemented MYSQL queries and stored procedures.
- Used Ajax to make the web application more interactive without refreshing the **data frequently**.

Environment: J2EE, JDBC, MYSQL, Java, Servlets, JSP, Struts Spring, Ajax, Javascript, C#, Web API, CORS, API, HTML, CSS, Eclipse, Visual Studio Code.

CA-Microsystems, Federal District, Mexico
Role: Sr. Programmer/Data Warehousing

September 2016 – September 2018

Description: CA MICRO SYSTEMS, located in Mexico, is dedicated to the analysis, design, research, construction, implementation and consulting of corporate solutions with a main focus on the **Tax area**, as well as **Financial, Accounting and Administrative**. Worked as a **Software Developer** on a financial and tax compliance platform (**MFU – Universal Fiscal Module**), developing **ETL processes** to extract and transform data from client **ERP systems** for electronic accounting and tax calculation. Built and maintained backend components using **C#/.NET and SQL Server**, supporting complex financial reporting and regulatory requirements.

Responsibility:

- Worked on Scrum-based Agile SDLC.
- Collaborate in the development and maintenance of the **MFU system**.
- Develop **ETL** to source data extraction, transformation and population process.
- Collaborate with clients to map the data extraction and processes of the different ERPs.
- Extract data from various source systems like Microsoft Dynamics, Oracle, SAP.
- Create views for the extraction and loading of information to perform the processing of the different reports.
- Designed and developed different components using C# .Net language with extensive use of Object Oriented Programming Techniques (OOPS) like Abstract Classes, polymorphism, interfaces etc.
- Implemented Store Procedures, Databases, Triggers SQL programming.
- Involved in creating **view** using **SQL programming** to enhance security of **database table**.
- Developed various reports using **Crystal Reports**.
- Generated complex Reports using **Crystal Reports** and **rendered** them in **word document**.

- Maintain **documentation** on what I worked on so that the rest of the team would be able to understand the code.

Environment: ETL (Extract Transform and Load), Microsoft Dynamics, Oracle, SAP, ASP .NET, SQL SERVER 2008 - 2012, Visual Studio 2008

EDUCATION

Technological University of Tecamac, Tecamac State of Mexico, Mexico

- Information and Communication Technology Engineer

VISA STATUS

Technological University of Tecamac, Tecamac State of Mexico, Mexico

- Permanent Residence in US.
