

SUMMARY

Software Engineer with **3+ years of experience** designing, developing, and deploying **Java-based backend and full-stack applications** in healthcare and SaaS environments. Expertise in **Spring Boot, RESTful APIs, microservices architecture, SQL optimization, and secure application development (JWT, RBAC, Spring Security)**. Proven ability to deliver **scalable, high-availability systems** using **AWS, Docker, Kubernetes, and CI/CD pipelines**. Strong background in **performance tuning, unit and integration testing, debugging, and production support**, with measurable improvements in system reliability, security compliance, and release velocity. Adept in **Agile/Scrum**, collaborating cross-functionally to deliver business-critical solutions.

SKILLS

Programming & Languages: Java (Core Java, OOP, Collections, Multithreading), Python (Scripting, Data Processing, Pandas, NumPy), JavaScript
Backend & Frameworks: Java, Spring Boot, Spring MVC, RESTful APIs, Microservices, Hibernate, JPA, AI-Enabled APIs, OpenAI API Integration
Frontend: HTML5, CSS3, JavaScript, React, Bootstrap
Databases: MySQL, PostgreSQL, MongoDB, SQL (Joins, Indexing, Query Optimization, Execution Plans), Data Analytics
Cloud & DevOps: AWS (EC2, S3, IAM, RDS), Docker, Kubernetes, CI/CD Pipelines, Git, ML Deployment Basics
Security: Spring Security, JWT, Role-Based Access Control (RBAC), Secure API Design, Authentication & Authorization
Testing & Quality: JUnit, Mockito, Unit Testing, Integration Testing, API Testing, Debugging, Model Validation (Basic)
System Design & Architecture: Microservices Architecture, API Design, Layered Architecture, Scalability, Performance Optimization, AI Integration
Monitoring & Production: Log Analysis, Root Cause Analysis, Incident Management, SQL Tuning, Application Monitoring, Data Monitoring
Practices & Methodologies: Agile/Scrum, SDLC, Code Reviews, Version Control, Cross-Functional Collaboration, AI Automation

PROFESSIONAL EXPERIENCE

Software Engineer | Syneos Health | New Jersey, USA

Jan 2025 – Present

- Designed and developed Java-based RESTful microservices using Spring Boot, JPA, and PostgreSQL, supporting healthcare workflows and processing 1.5M+ monthly requests in production.
- Implemented secure authentication and authorization using Spring Security, JWT, and RBAC, achieving 100% internal security audit compliance and preventing unauthorized access.
- Optimized complex SQL queries using indexing, joins, and execution plans, improving report performance by 35% and reducing operational wait times.
- Built and deployed containerized applications using Docker and AWS (EC2, RDS) with automated CI/CD pipelines, cutting release cycles from two weeks to one week.
- Monitored production systems through logs and metrics, performed root cause analysis, and reduced average incident recovery time by 40%.
- Collaborated with product owners, QA, and DevOps teams in an Agile/Scrum environment to deliver stable, scalable releases.
- Implemented API versioning, validation, and documentation (Swagger/OpenAPI) to improve maintainability and enable seamless integration across internal services.
- Enhanced application monitoring and alerting using logs and performance metrics, proactively identifying issues and improving system availability in production.

Software Engineer (Backend) | Fortis Healthcare Ltd | India

Jul 2022 – Dec 2023

- Designed and developed Java-based backend services using Spring MVC, Hibernate, and MySQL for hospital management systems, supporting patient records, billing, appointments, and clinical workflows used daily by medical and administrative teams.
- Modernized legacy healthcare applications by refactoring monolithic components into modular microservices using Spring Boot and JPA, improving maintainability and reducing production defects by 18%.
- Integrated third-party healthcare and insurance RESTful APIs using Spring Boot and JSON, enhancing interoperability between hospital systems and improving data exchange reliability by 25%.
- Automated healthcare reporting and data processing using Python scripting, streamlining administrative operations, reducing manual errors, and saving 8+ hours per week.
- Built and maintained unit and integration test suites using JUnit and Mockito, increasing test coverage to 92% and ensuring application stability across clinical and billing modules.
- Collaborated with product owners, QA, and operations teams in an Agile/Scrum environment, performing code reviews and ensuring compliance with SDLC, data security, and healthcare application quality standards.

Java Backend Engineer | Druva Software | India

Nov 2021 – Jun 2022

- Built scalable backend components using Core Java, collections, and multithreading to support high-concurrency enterprise backup operations.
- Designed and implemented RESTful APIs with Spring Boot, Hibernate, and PostgreSQL, improving response times by 30% under peak load.
- Optimized database performance by analyzing slow SQL queries, applying indexing and execution plans, and reducing database CPU utilization by 22%.
- Debugged and resolved production issues through log analysis and stack traces, decreasing recurring defects by 17% in a single release cycle.
- Worked within Agile/Scrum teams using Git and Jira, consistently delivering sprint commitments on schedule.
- Implemented input validation, exception handling, and API security best practices, improving system reliability and reducing runtime errors.
- Collaborated with QA teams to perform regression testing and release validation, ensuring stable deployments for enterprise customers.

EDUCATION

Master of Science in Technology Management

Aug 2025

Lindsey Wilson College, Columbia, KY, United States

Bachelor of Technology in Computer Science Engineering

May 2023

Vardhaman College of Engineering, Hyderabad, Telangana, India

CERTIFICATIONS

- Microsoft Certified: Power BI Data Analyst Associate (PL-300)
