

JONTY TEJANI

Dallas, TX | (562) 632-2347 | jonty.t@myjobsmails.com | [LinkedIn](#)

SUMMARY

- Software Engineer with 4+ years of experience designing, building, and scaling high-performance backend systems using **Golang and Node.js**. Proven track record of migrating latency-sensitive services, optimizing SQL-heavy workloads, and delivering reliable APIs for high-traffic products. Experienced in AI-assisted search systems, distributed services, and production environments where performance, correctness, and scalability matter.

EXPERIENCE

INFLUXER

Jun 2024 - Current

Software Engineer

Dallas, TX

- Rebuilt the public website and internal admin portal using **Remix, React, and Shopify Storefront API**, supporting **50K+ student-athletes and 500K+ SKUs** while simplifying campaign, merch, and order workflows.
- Improved backend performance by replacing ORM-heavy data access with **Node.js** services using raw **SQL** and query tuning, reducing checkout and catalog latency from **900ms to 250ms** during high-traffic campaigns.
- Implemented a personalized product ranking flow using athlete attributes and university signals, integrating **Python-based scoring logic** into the purchase experience and increasing average order value by **10%**.
- Added lightweight ML-driven content tagging and search using text embeddings, enabling faster discovery of blogs, merch collections, and campaign assets and reducing manual curation effort by **35%**.
- Built server-rendered content and pagination using Remix loaders and Shopify APIs, improving page load speed and first-contently paint for SEO-driven traffic.
- Migrated latency-sensitive backend paths from **Node.js** to **Go** for selected services, improving request stability under peak load and reducing tail latency during major launches.
- Worked in a cross-functional setup with product, marketing, and AI/ML teams to stabilize admin workflows, adding logging, metrics, and alerting that reduced production issue resolution time by **30%**.

PRO-TEK CONSULTING

Sep 2023 – Jun 2024

Software Engineer

Los Angeles, CA

- Built backend services in **Node.js** exposing REST APIs for document ingestion, search, and access control, supporting **multiple enterprise clients and large document collections** in production.
- Implemented a **Retrieval-Augmented Generation** workflow using **LLM APIs, embeddings, and semantic retrieval**, replacing keyword-based search and improving answer relevance by **35%** in internal evaluations.
- Designed the retrieval layer with **document chunking, embedding pipelines, and ranking rules**, enabling analysts to locate relevant information within seconds during routine workflows.
- Developed a simple **React-based frontend** to present generated responses with source references, enabling adoption by **non-technical users across client teams**.
- Containerized backend and AI services using **Docker** and integrated them into a **CI/CD pipeline**, ensuring consistent deployments across development and test environments.
- Added **unit and API tests** for Node.js services, reducing regression issues by **25%** over successive releases.
- Delivered features in an **Agile setup**, coordinating with backend, frontend, and AI engineers to plan sprints and incorporate feedback, improving delivery predictability by **20%**.

PAR SOLUTIONS

Oct 2019 - Jul 2021

Full Stack Developer

India

- Built and owned backend services in **Node.js (Express)** for the Dr. Zio fitness platform with **1M+ downloads**, powering subscription billing, workout delivery, and personalized content used by paying users.
- Refactored a legacy **Express MVC** codebase into clearer service boundaries, improving request throughput and making ongoing feature changes easier without breaking existing mobile clients.
- Developed **React-based web features** for workouts, diet plans, and blogs, improving page responsiveness and engagement across high-traffic user flows.
- Implemented user-level personalization using backend APIs and stored preferences, enabling tailored workout and content experiences tied to subscription tiers.
- Introduced automated testing for backend and UI workflows using **Jest and Mocha**, raising test coverage from near zero to **around 50%** and reducing repeat production issues.
- Delivered a separate **Django + MySQL** client application end to end, working in an **Agile setup with Jira** to manage sprints, reviews, and releases.

TECHNICAL SKILLS

Backend Technologies: Node.js, Golang, Express, REST APIs, Microservices, Serverless Architecture, Message Queues, gRPC, GraphQL, Python, Data Structures, Algorithms

Frontend Technologies: React, Remix, JavaScript, HTML, CSS, TypeScript, Redux, Webpack, Jest, Next.js, Gatsby

Database Management: MySQL, PostgreSQL, MongoDB, NoSQL, Database Indexing, Query Optimization, Data Modeling, Database Migrations, Redis

Cloud Platforms: AWS, Docker, Kubernetes, Serverless, Load Balancing, Auto Scaling, IAM, CloudWatch

AI/ML Integration: Text Embeddings, LLM, Ranking Logic, A/B Testing

Testing and Automation: Unit Testing, Integration Testing, API Testing, CI/CD, Git, GitHub Actions, Jenkins

E-commerce Solutions: Shopify API, Payment Gateways, Order Management, Product Catalog, Shopping Cart, Customer Accounts, Discounts, SEO, Google Analytics, A/B Testing

EDUCATION

California State University Long Beach, USA

Aug 2021 - May 2023

Masters of Science in Computer Science

Gujarat Technological University, India

Aug 2016 - May 2020

Bachelor of Engineering in Computer Engineering
