Staff / Senior Backend Engineer | GenAI-Ready | Distributed Systems | Cloud Platforms

Professional Summary

Staff-level Backend Engineer with **10+ years of experience** building **high-scale, low-latency distributed systems** and **cloud-native platforms**. Strong expertise in **Java, Spring Boot, Microservices, Kafka, AWS, Redis, and Elasticsearch**, with hands-on experience handling **millions of daily transactions**. Actively leverage **GenAI tools (GitHub Copilot, ChatGPT)** to accelerate development, improve code quality, enhance test coverage, and modernize backend platforms. Proven track record of owning complex systems, mentoring engineers, and delivering business-critical solutions at scale.

Core Skills

- **Backend Engineering:** Java, Spring Boot, REST APIs, Microservices, API Design
 - **Distributed Systems:** Scalability, High Availability, Fault Tolerance, Low-Latency Systems
 - **Event-Driven Architecture:** Kafka, RabbitMQ, Asynchronous Processing
 - **Databases & Caching:** MySQL, PostgreSQL, MongoDB, Aurora, Redis, DB2
 - **Search & Analytics:** Elasticsearch
 - **Cloud & Infrastructure:** AWS (EC2, S3, RDS, Lambda), Docker, Kubernetes, Terraform
 - **Concurrency & Performance:** Multithreading, JVM Performance Tuning
 - **Security:** OAuth2, JWT, RBAC, PGP Encryption
 - **Observability:** Datadog, Prometheus, ELK Stack
 - **CI/CD & Dev Productivity:** Git, Jenkins, GitHub Actions, Maven, Gradle
 - **GenAI & AI-Assisted Development:** GitHub Copilot, ChatGPT (code generation, refactoring, design reviews, test automation)
-

Professional Experience

Technical Lead / Staff Backend Engineer

Morgan Stanley – Bengaluru, India

March 2023 – Present - Owned backend architecture for an **enterprise-scale distributed platform** managing exceptions, workflows, and tasks across multiple business units. - Designed and scaled **microservices-based systems** integrating **100+ upstream data feeds**, processing high-volume events via MQ and asynchronous pipelines. - Improved platform reliability using **high-availability patterns**, fault isolation, and proactive observability. - Utilized **GitHub Copilot and ChatGPT** to accelerate feature

development, refactor legacy modules, and improve unit/integration test coverage. - Led design reviews and mentored engineers, raising overall backend code quality and delivery velocity.

Lead Backend Engineer

BukuWarung India Pvt Ltd – Bengaluru, India

December 2021 – November 2022 - Architected a **high-throughput notification platform** delivering **60K+ messages/day** across multiple channels. - Migrated synchronous workflows to a **Kafka-based event-driven architecture**, improving system resilience and reducing failures by **30%**. - Leveraged **AI-assisted development tools** to speed up API development, schema evolution, and automated testing. - Partnered with product and business teams to deliver scalable backend capabilities.

Senior Software Engineer (Backend)

Verifone India – Bengaluru, India

July 2019 – December 2021 - Designed and deployed **high-availability backend systems** processing **4M+ transactions/day** with zero downtime. - Built secure tokenization services using **PGP encryption**, meeting compliance and security standards. - Improved database performance by **40%** through query optimization and data modeling. - Contributed to cloud-ready backend modernization initiatives.

Software Engineer

Envestnet Yodlee – Bengaluru, India

January 2015 – November 2018 - Developed backend services for large-scale **Personal Finance Management (PFM)** platforms. - Enhanced data pipelines and API integrations to improve data accuracy and reliability.

Project Analyst / Software Engineer

Cognizant Technology Solutions – Chennai, India

January 2015 – March 2017 - Delivered backend components for enterprise banking applications serving US clients. - Assisted in system design, development, and production support.

Education

B.Tech in Information Technology

Bundelkhand Institute of Engineering and Technology, Jhansi | 2014

Key Achievements

- Achieved **99.9% uptime** on mission-critical backend platforms.
- Reduced processing latency by **20%** for financial and risk systems.
- Designed architectures handling **millions of daily requests**.

- Recognized for mentoring engineers and driving backend excellence.
-

Soft Skills

Technical Leadership | System Design | Ownership Mentality | Cross-Functional Collaboration | Agile & DevOps | Data-Driven Decision Making
