SUMMARY

Software Engineer with 3+ years of experience working on Java-based backend systems and REST APIs. Hands-on experience building and supporting microservices using Spring Boot, writing efficient SQL and NoSQL queries, and deploying applications on AWS with Docker and Kubernetes. Comfortable working with CI/CD pipelines, monitoring production systems, and resolving issues across development and production environments. Works well in Agile teams, collaborates closely with senior engineers and product partners, and focuses on writing clean, reliable, and maintainable code.

TECHNICAL SKILLS

Programming Languages: Java

Backend Technologies: Spring Boot, RESTful APIs, Microservices Architecture, Backend Application Development

Frontend Technologies: React.js, HTML, CSS, JavaScript

Databases: SQL (Joins, Query Optimization, Performance Tuning), NoSQL Databases, Transactional Data Processing

Cloud & Containerization: AWS (EC2, EKS), Docker, Kubernetes, Cloud-Based Deployments

DevOps & CI/CD: Jenkins, Git, CI/CD Pipelines, Build and Deployment Automation

Monitoring & Production Support: Splunk, Grafana, Application Monitoring, Log Analysis, Root Cause Analysis, Production Support

Testing & Quality Assurance: JUnit, Unit Testing, Debugging, Defect Fixing, Code Reviews, Test Coverage Improvement

Methodologies & Practices: Agile Scrum, Sprint Planning, Cross-Functional Collaboration

Documentation & Tools: Technical Documentation, API Documentation, System and Data Flow Documentation

EXPERIENCE

Software Engineer (Intern → Contract) | JP Morgan and Chase | AL, USA

Dec 2024 - Present

- Developed and supported Java and Spring Boot microservices processing thousands of financial transactions daily, ensuring consistent performance, data accuracy, and compliance with enterprise reliability standards.
- Built, enhanced, & optimized REST APIs along with SQL and NoSQL queries, reducing average API response time by 20% during peak transaction periods.
- Deployed and supported containerized applications using Docker and Kubernetes on AWS EKS, supporting multiple environments and reducing manual deployment effort by 30%.
- Assisted in setting up and maintaining CI/CD pipelines using Jenkins and Git, enabling faster release cycles and reducing release-related issues across development, UAT, and production environments.
- Monitored application health using Splunk & Grafana, performing log analysis and root cause investigations that reduced recurring production incidents.
- Collaborated closely with senior engineers and product teams across enterprise-scale agile sprints, contributing to code reviews, design discussions, and system documentation.

Software Engineer | Hexaware Technologies | India

Nov 2022 - Jul 2023

- Owned backend module development using Java and REST APIs, managing 5+ feature implementations from requirement clarification through testing and production deployment across enterprise applications.
- Refactored legacy application components as part of cloud migration initiatives, reducing processing delays and enabling approximately 20% of critical business workflows to transition to cloud-ready services.
- Designed, optimized, and maintained SQL queries supporting high-volume transactional datasets, improving query performance by up to 20% across development and UAT environments.
- Integrated application changes into CI/CD pipelines using Jenkins and Git, supporting weekly sprint releases and reducing release-related issues across environments.
- Worked within Agile Scrum teams to resolve production defects and sprint issues with minimal escalation, reducing average issue turnaround time and improving delivery consistency.
- Authored and maintained technical documentation covering APIs, data flows, and deployment steps, improving long-term maintainability and supporting faster onboarding of new engineers.

Software Engineer | Cybage Software | India

May 2021 - Oct 2022

- Implemented backend and frontend features using Java, Spring Boot, REST APIs, and React for SaaS applications supporting 3+ international clients across retail and healthcare domains.
- Developed REST APIs with structured validation and error handling mechanisms, reducing recurring API-related production issues by 20% and improving reliability of frontend-backend data exchange.
- Wrote comprehensive unit test cases using JUnit and resolved 30+ functional defects, improving overall module stability and increasing test coverage across assigned components.
- Participated actively in Agile Scrum ceremonies across 10+ sprints, delivering assigned user stories on time under guidance from senior engineers and adhering to sprint commitments.
- Prepared and maintained technical documentation for 15+ application workflows and APIs, enabling faster onboarding and reducing internal support and clarification queries.

PROJECTS

Payment Processing Microservice | Java, Spring Boot, REST APIs, PostgreSQL, Redis, AWS, Docker, Jenkins

- Built a Spring Boot-based microservice to process high-volume financial transactions with strong reliability and data consistency.
- Implemented secure REST APIs with JWT authentication to manage payment initiation, validation, and transaction status tracking.
- Improved API performance by nearly 30% by implementing Redis caching for frequently accessed transaction reference data.
- Containerized the application using Docker and deployed on AWS with automated CI/CD pipelines configured using Jenkins.
- Implemented centralized logging, monitoring, and alerting using AWS CloudWatch to improve production stability and uptime.

Employee Management Portal | Java, Spring Boot, REST APIs, React, Angular, SQL, Docker

- Developed a backend-driven employee management system supporting onboarding, approvals, and employee profile management workflows.
- Designed and implemented Spring Boot REST APIs for authentication, role-based authorization, and secure workflow orchestration.
- Built responsive user interfaces using React and Angular to consume backend APIs for HR and employee operations.
- Containerized backend services using Docker and deployed applications on Linux environments for consistent multi-stage deployments.
- Implemented role-based access control to ensure secure data visibility across employees, managers, and HR users.

Customer Support Ticketing & Chatbot System | Java, Spring Boot, REST APIs, Angular, MongoDB

- Built a backend-driven customer support ticketing platform to manage ticket creation, assignment, escalation, and status tracking workflows.
- Integrated chatbot functionality using third-party NLP APIs to automate common support responses and reduce manual ticket handling.
- Developed REST APIs and Angular-based interfaces for ticket creation, filtering, and reporting across support teams.
- Designed MongoDB collections with optimized indexing strategies, improving search and retrieval performance for high-volume ticket data.
- Configured automated notifications (email/SMS) for high-priority ticket escalations to improve response time and operational efficiency.

EDUCATION

Masters in Computer Science | Lindsey Wilison College, KY, USA

May 2025

Bachelors in Computer Science | Parul University, Vadodara, India

May 2023
