Summary

Software Engineer with 3+ years of experience building secure, scalable backend and cloud-native applications across healthcare, SaaS, and CRM platforms. Experienced in API development, CI/CD, cloud deployments, with a strong focus on reliable, production-ready systems.

Technical Skills

- Languages:** Python,C#, Java, JavaScript (ES6+), TypeScript, SQL, HTML, CSS
- Frameworks & Libraries:** ASP.Net, React.js, Node.js, Express.js, Spring Boot, Fast API, Flask, Redux, Chart.js
- Backend & API Development:** RESTful APIs, GraphQL, Prisma ORM, OAuth 2.0, JWT, JSON, XML, Postman
- Cloud & DevOps:** Azure App Services, Azure Functions, AWS (EC2, Lambda, S3), Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD
- Databases & Storage:** PostgreSQL, MySQL, MongoDB, Redis, AWS S3, Google Cloud (GCP)
- Version Control & Dev Tools:** Git, Linux, Jira, Salesforce, VSCode
- Machine Learning & AI:** Scikit-learn, TensorFlow, PyTorch, Keras, Lang Chain, RAG Pipelines

Professional Experience

Software Engineer

Jan 2025 - Present

Universal Health Services, San Jose, California

- Built and maintained a HIPAA-compliant healthcare data platform using Python (Django, FastAPI), DynamoDB, and RESTful APIs, applying Test-Driven Development (TDD) principles and reducing system latency by 45%.
- Supported production systems serving thousands of users with 99.9% uptime, following Agile/Scrum practices and on-call rotation.
- Established secure access controls using RBAC, JWT/OAuth authentication, and encryption at rest and in transit.
- Containerized and Deployed microservices on AWS using Docker and Kubernetes, with serverless components on AWS Lambda and CI/CD pipelines via GitHub Actions and Jenkins.
- Owned end-to-end design and development of backend services, from requirements gathering to deployment and post-release monitoring.
- Implemented real-time ETL pipelines using Apache Kafka and Airflow to ingest patient event streams and load data into Snowflake data warehouse, enabling near real-time analytics.
- Engineered analytics dashboards using Python and PostgreSQL, improving KPI performance by 40% through SQL optimization.

Software Engineering Intern

Aug 2024 – Dec 2024

University of California–Office of President, Oakland, California

- Created and deployed secure data analytics dashboards using Google API Management, React, Flask, and FastAPI, ensuring regulatory compliance while improving system responsiveness and usability.
- Led end-to-end data migration to AWS using AWS DMS and Amazon Aurora (MySQL/MariaDB), scaling data volume from 300K to 500K+ records while ensuring data lifecycle management, governance compliance, and schema consistency.
- Designed automated ETL pipelines to enable high-performance, scalable data integration between GCP and AWS, ensuring data quality within Amazon RDS environments.
- Launched an AI agent answering platform queries via LLMs, RAG pipelines, and TensorFlow, integrated with a GraphQL/Python backend for pension tracking, boosting user satisfaction by 35%.

Software Developer

Aug 2021 – Oct 2022

Mphasis, India

- Spearheaded scalable CRM solutions across Salesforce Sales and Health Cloud by developing backend automation (Apex triggers, Flows, Java, Spring Boot) and frontend LWC components using JavaScript, React, automating lead tracking, and provider workflows.
- Integrated Salesforce with third-party systems and built ETL pipelines using Python and SQL to process data via REST APIs, migrating cleaned datasets into Redshift and improving data retrieval speed by 40%.
- Reduced SQL execution time 40% by designing normalized schemas, implementing indexes, and tuning database queries.
- Cut release errors 25% by automating build and deployment pipelines with GitLab CI/CD.

Education & Certification

University of the Pacific, Stockton, USA

Aug 2023 – May 2025

Master of Science in Computer Science

University of Mumbai, Maharashtra, India

Aug 2019 – May 2022

Bachelor of Science in Information Technology

Full Stack Developer -Meta | AI Engineering -IBM

Projects

Vita Care Secure: A Secure Telemedicine Application

- Architected a HIPAA-compliant telemedicine platform for 10,000+ users with encrypted video consultations and 99.9% uptime.
- Enabled Node.js role-based APIs, reducing unauthorized access 90% while enabling secure multi-database patient record management.

Real-Time Collaborative Project Management Platform

- Headed project management tool with Spring WebSocket achieving 99% sync accuracy and improving productivity 35%.
- Configured Slack and Jira APIs, automating workflows and reducing manual task updates by 40%.
